To my father
I dedicate this book

P R E F A C E.

To Professor DE LOUVER, whose kindness has greatly facilitated the publishing of the present volume, I offer my sincere thanks.

This work was written under the direction of my teacher and friend Dr. S. R. STEINMETZ, to whom I wish here to tender my warmest acknowledgments. It was Dr. STEINMETZ who first showed me the beauty of the social sciences, and his kindness in guiding my steps on the rough path of scientific investigation has been invaluable to me.

My task has further been lightened by the ready courtesy of the functionaries of the public libraries of Utrecht and Leiden, and especially of the Royal Library of The Hague, which contains a valuable collection of ethnographical literature.

Dr. J. D. E. SCHMELTZ has kindly allowed me to make use not only of the books belonging to the Ethnographical Museum of Leiden, but also of his private library.

C O N T E N T S.

| | Page |
| General introduction | . XXI |

Our book deals with the general character of slavery as an industrial system XXI — We confine ourselves to the phenomena of savage life XXI — The object of ethnology is not only to reconstruct the early history of mankind, but to find sociological laws XXII — Bearing of the results of ethnological investigation upon the study of social phenomena in general XXII — Our method inductive and comparative XXIII — Ethnographical literature XXIII — This literature may not be used without a thorough criticism XXIII. — „Statistical method” XXV — The facts must serve as a basis whereupon to found theories, not as mere illustrations of preconceived theories XXV — But we cannot do without leading ideas XXV — We treat one subject thoroughly instead of many subjects superficially XXVI — Writers on the general history of slavery Letourneau XXVI — Ingram XXVI — Tourmagne XXVII — Cairnes XXVII — Writers on social science at large XXVII

PART I. — DESCRIPTIVE

Chapter I. — Definition and distinction from kindred phenomena.

| | |
|---|---|
| § 1. Ordinary meaning of the term „slavery” | 1 |
|---|---|

It is necessary to know this meaning of the term, as both ethnographers and theorists use it in this sense 2 — „Slavery of women” and „wage-slaves” 2 — Three characteristics of slavery 3 .

| | Page |
|---|------|
| § 2 Use of the term „slavery” in theoretical literature . . . | 4 |
| Our theorists agree that the chief characteristic of slavery consists in this, that the slave is the „property” or „possession” of his master | |
| § 3 Definition for scientific use . . . | 5 |
| We want a sociologically practical definition 5 — The function of slavery is a division of labour 6 — Voluntary and compulsory labour 6 — The slave the property of his master and compelled to work 7 — „Property” implies compulsory labour 7 — Our definition Its advantages 8 | |
| § 4 Distinction of slavery from kindred phenomena I Wives in an abject condition . . . | 8 |
| „Slavery of women” as spoken of by ethnographers and theorists 8 Condition of women among the Australian aborigines Bad but not so much so as has sometimes been supposed 9 — Division of labour between the sexes not always so unreasonable as it first sight it seems 20 — Wives in an abject condition show much resemblance to slaves but are not slaves as their chief function is that of wives and mothers 22 — Slavery proper does not exist when there are none but female slaves 23 | |
| § 5 Distinction of slavery from kindred phenomena II Children subjected to the head of the family . . . | 24 |
| Education among savages Di Steinmetz's investigations 24 <i>Pater potestas</i> and <i>potestas familiaris</i> 26 — Children though entirely subjected to their father are not slaves as they occupy quite another place in the social system 27 — Adopted children sometimes difficult to distinguish from slaves 27 — Slavery only exists beyond the limits of the family proper 29 | |
| § 6 Distinction of slavery from kindred phenomena III Members of a society in their relation to the head of the community . . . | 29 |
| The subjects „slaves of the king” 29 — A king has never a right of property over his subjects 30 — Penal servitude occurs in many countries where slavery does not exist 31 — „Property” better than „possession” 31 | |
| § 7 Distinction of slavery from kindred phenomena IV Subjected tribes, tributary provinces, lower classes, free labourers . . . | 31 |
| „Slave tribes” and „slave districts” inappropriate names for tribes subjected <i>en bloc</i> and tributary districts 31 — Lower classes The lack of details sometimes prevents us from determining, whether a labouring class consists of free labourers or slaves 32 | |

| | Page |
|--|------|
| § 8 Distinction of slavery from kindred phenomena V Serfs | 32 |
| Serfdom in Germany 33 — In France 34 — In Rome (<i>donatus</i>) 35 | |
| — Opinions of theorists 36 — Serfs are not slaves because they are not the property, in the sense of Roman law of their masters 37 | |

| | |
|---|----|
| § 9 Pawns or debtor slaves | 38 |
| The slave-state of pawns is conditional 38 — Pawns are not in a legal sense the property of their masters but we may call them slaves as they take the same place as other slaves in the social system 39 | |

Chapter II — Geographical distribution of slavery

| | |
|------------------|----|
| § 1 Introduction | 40 |
|------------------|----|

It is not so easy as at first sight it seems to ascertain the existence or non existence of slavery in every particular case 40 — Our method 1 What if slavery is stated to exist? 40 — 2 What if slavery is stated to be absent? 41 — 3 What if our authorities are silent on the subject? 42 — We confine ourselves to sa ages 43 — Civilized and semi civilized influence A causing the disappearance of slavery 44 — B introducing slavery 45 — Geographical groups 46 — „Positive and „negative cases 46 — Use of the past and present tense 46

| | |
|-------------------|----|
| § 2 North America | 47 |
|-------------------|----|

1 Eskimos 47 — 2 Nootka group 50 — 3 Finich group 51
 4 Algonquin group 52 — 5 Hojunks group 56 — 6 Choctaw Muskoghe group 57 — 7 Dacotah group 58 — 8 Oregon group 60
 9 Californians 62 — 10 New Mexicans 64 — Negro slavery among the Indians 70

| | |
|-------------------------------|----|
| § 3 Central and South America | 71 |
|-------------------------------|----|

| | |
|---------------|----|
| § 4 Australia | 85 |
|---------------|----|

| | |
|---------------|----|
| § 5 Melanesia | 87 |
|---------------|----|

| | |
|---------------|----|
| § 6 Polynesia | 98 |
|---------------|----|

| | |
|----------------|-----|
| § 7 Micronesia | 102 |
|----------------|-----|

| | |
|-----------------------|-----|
| § 8 Malay Archipelago | 108 |
|-----------------------|-----|

I Malay Peninsula 108 — II Sumatra and neighbouring islands 109
 — III Borneo 111 — IV Celebes 112 — V Little Sund islands and Moluccas 12 — VI Philippines 114 — VII Madagascar 115
 — Semi-civilized Malay peoples 118

XII

| | Page |
|--|------|
| § 9 Indo-Chinese Peninsula | 121 |
| § 10. India, Afghanistan, Himalaya | 122 |
| § 11. Central Asia | 126 |
| § 12. Siberia | 132 |
| § 13. Caucasus | 137 |
| § 14. Arabia | 139 |
| § 15. Africa. A. Bantu tribes | 139 |
| 1 Kaffirs 140 — 2 South-west Bantus 145 — 3 East African Bantus 147 — 4 Tribes on the Congo and in Lower Guinea 148 — 5 Natives of the Wahuma states 151 | |
| § 16. Africa B. Soudan Negroes | 153 |
| 1 Coast of Guinea 153 — 2 Haussa states 155 — 3 Central Soudan 155 — 4 Upper Nile 155 — 5 Appendix African Is- lands 157 | |
| § 17. Africa. C Light-coloured South Africans and African pigmy-tribes | 159 |
| § 18. Africa D Hamitic peoples | 161 |
| § 19 Recapitulation | 163 |

PART II — THEORETICAL.

Chapter I — Method and division

| | |
|---|-----|
| § 1. Method | 166 |
| Stages of culture Morgan's and Vukand's classifications 166 | |
| Distinction of savages according to their general culture as yet impracticable 168 — Assertions about slavery being universal at some stages of culture 168 — The existence of slavery probably mainly depends on the economic state of society 169 — Opinions of theorists concerning slavery at several stages of economic life 169 | |
| § 2. Distinction of economic groups | 172 |
| We shall inquire next how many positive and negative cases there are in different economic groups 172 We shall not give an as- cending series of economic stages Dargun's view 173 — Our groups 1 Hunting and fishing 174 — 2 Pastoral nomadism 174. — 3, 4, 5. Agriculture Principle according to which the 3 agri- | |

| | |
|--|------|
| cultural groups will be distinguished 175 — Trading and cattle-breeding agriculturists 176 | Page |
| § 3 Hunting and fishing, pastoral, and agricultural tribes in the several geographical districts | 177 |
| Our list gives no evidence as to the economic state of the geographical groups 177 — List 178 | |

Chapter II — Hunters and fishers

| | |
|---|-----|
| § 1 Why slaves are not of much use to hunters | 187 |
| List of positive and negative cases 187 — The large prevalence of negative cases must be due to general causes 190 — Scarcity of food 190 — Hunting slaves can easily escape 191 — Living in small groups 192 — Hunting not fit to be performed by slaves because 1 hunters are highly esteemed 193 2 hunting requires the utmost application 195 — Hunters and industrial peoples 195 — Why hunters do not keep slaves performing female labour 197 | |
| § 2 The slave keeping tribes of the Pacific Coast | 199 |
| Fishing not nearly so unfavourable to the existence of slavery as hunting 199 — Most of our positive cases are found on the North Pacific Coast of North America 201 — Circumstances which may account for the existence of slavery on the Pacific Coast 1 Abundance of food 201 — 2 Fishing the chief source of subsistence Variety of food 202 — 3 Fixed habitations living in large groups preserving of food 203 — 4 Trade and industry 205 — 5 Property and wealth 208 — The growth of slavery accelerated by these tribes forming a somewhat homogeneous group 211 — Labour imposed on slaves 1 They strengthen their masters' force in warfare 212 — 2 ^o They are employed in hunting fishing and work connected with fishing 212 — 3 They perform domestic labour 214 — Why female labour is so highly valued 215 — Women prepare the articles of commerce 215 — Women hold a high position 217 — Dr Grosse on the condition of women among „higher hunters' 220 — Slavery among the Abipones 223 — Tehuelches 224, — Kamschadales 224 | |
| § 3 Experimentum crucis Australia | 225 |
| We want to prove that the circumstances furthering slavery on the Pacific Coast are wanting among the other hunters and fishers 225 — We confine ourselves to the three great groups Austrians, Indians of Central North America, and Eskimos 226 — Aboriginal life in Australia 1 ^o No abundance of food 227 — 2 ^o Variety of food Fishing not the chief source of subsistence 227 — 3 ^o No fixed habitations, small groups, little food preserved Improvidence | |

| | |
|--|------|
| cultural groups will be distinguished 175 — Trading and cattle-breeding agriculturists 176 | Page |
| § 3 Hunting and fishing, pastoral, and agricultural tribes in the several geographical districts | 177 |
| Our list gives no evidence as to the economic state of the geographical groups 177 — List 178 | |

Chapter II — Hunters and fishers

| | |
|---|-----|
| § 1 Why slaves are not of much use to hunters | 187 |
| List of positive and negative cases 187 — The large prevalence of negative cases must be due to general causes 190 — Scarcity of food 190 — Hunting slaves can easily escape 191 — Living in small groups 192 — Hunting not fit to be performed by slaves because 1 hunters are highly esteemed 193 2 hunting requires the utmost application 195 — Hunters and industrial peoples 195 — Why hunters do not keep slaves performing female labour 197 | |
| § 2 The slave keeping tribes of the Pacific Coast | 199 |
| Fishing not nearly so unfavourable to the existence of slavery as hunting 199 — Most of our positive cases are found on the North Pacific Coast of North America 201 — Circumstances which may account for the existence of slavery on the Pacific Coast 1 Abundance of food 201 — 2 Fishing the chief source of subsistence Variety of food 202 — 3 Fixed habitations living in large groups preserving of food 203 — 4 Trade and industry 205 — 5 Property and wealth 208 — The growth of slavery accelerated by these tribes forming a somewhat homogeneous group 211 — Labour imposed on slaves 1 They strengthen their masters' force in warfare 212 — 2 ^o They are employed in hunting fishing and work connected with fishing 212 — 3 They perform domestic labour 214 — Why female labour is so highly valued 215 — Women prepare the articles of commerce 215 — Women hold a high position 217 — Dr Grosse on the condition of women among „higher hunters' 220 — Slavery among the Abipones 223 — Tehuelches 224, — Kamschadales 224 | |
| § 3 Experimentum crucis Australia | 225 |
| We want to prove that the circumstances furthering slavery on the Pacific Coast are wanting among the other hunters and fishers 225 — We confine ourselves to the three great groups Austrians, Indians of Central North America, and Eskimos 226 — Aboriginal life in Australia 1 ^o No abundance of food 227 — 2 ^o Variety of food Fishing not the chief source of subsistence 227 — 3 ^o No fixed habitations, small groups, little food preserved Improvidence | |

of little moment 267 — Subsistence among pastoral tribes entirely dependent on capital 268 — Wealth and poverty Free labourers very frequent 269 — The same may be observed among cattle-breeding agriculturists 272 — The characteristic of pastoral life is not the existence of wealth but of poverty 273 — Pastoral life does not require much labour the men are often very lazy 273 — Among the Laibas pastoral life is not so easy but it is warriors who are wanted here rather than labourers 276 — In North-east Africa subjection of tribes *en bloc* serves as a substitute for slavery 277

The same is the case among some pastoral tribes outside North-east Africa 281

§ 2 Slavery among pastoral tribes

282

We have still to account for the positive cases We shall first investigate the influence of secondary internal causes 282 — 1 Slaves sometimes perform domestic i.e. female labour 283 — 2 Preserving of food has no influence 283 — Slavery does not seem to serve commercial purposes 283 — 4 Slaves are often employed in warfare Pastoral tribes live in rather small independent groups this together with their warlike habits makes enforcement of the family desirable 284 — Slaves are also kept as a luxury 286

Slaves preferred to free servants 287 — What is the difference between the slave keeping and the other pastoral tribes? 288

The difference consists in external circumstances of which the principal are the slave-trade and the neighbourhood of inferior races 289 — Pastoral tribes are in a state of equilibrium a small additional circumstance turns the balance 291 — Recapitulation 292

Chapter II — Agricultural tribes

§ 1 Numbers of positive and negative cases in the three agricultural groups

294

§ 2 Development of agriculture and development of slavery

295

Slavery considerably more frequent among agriculturists of the higher stages than among hunting agriculturists 296 — Hunting agriculturists bear a strong resemblance to hunters 297 — Yet many hunting agriculturists keep slaves, this will have to be accounted for by secondary causes 298 — Slavery does not appear to be more frequent among fishing than among hunting agriculturists 298

§ 3 Capital and labour among agricultural tribes

299

Where agriculture is carried on without the aid of domestic animals, subsistence does not depend on capital 299 — One apparent exception 300 — Agriculture does not require any peculiar skill 300

— Compulsion the only means, in primitive agricultural societies, of getting labourers 301 — Indolence of savages 301 — Adam Smith's view 302 — Cairnes on cultivation by slaves and by peasant proprietors 302 — Cairnes' argument does not hold with regard to primitive slavery 304 — „Retail” and „wholesale slavery” 305

§ 4. Land and population 301

The general rule of the last paragraph does not obtain where all land has been appropriated 306 — Cairnes' view 306 — Here again Cairnes' argument does not apply to primitive slavery 307 — Loria's argument 307 — Loria's reasoning is not correct in all details, but in the main he is right 309 — Wakefield's argument is nearly the same as Loria's 309 — There is one more reason not mentioned by Loria 311 — We shall only speak of self-dependent agricultural countries 312 — Meaning of „appropriation” 312 — Criteria from which we may infer whether all land has been appropriated 313 — Meaning of „land fit for cultivation” 315 — We shall confine ourselves to a survey of land tenure in Oceania 315 — Slavery in Oceania has never prevailed to any great extent. We shall try to account for this by all land having been appropriated 316

§ 5. Land tenure in Polynesia 311

On most Polynesian islands all land has, or had been appropriated. In Samoa and New Zealand there was still free land. Manahiki is a doubtful case.

§ 6. Land tenure in Micronesia 32

Almost everywhere in Micronesia all land is held as property. Mortlock is perhaps an exception.

§ 7. Land tenure in Melanesia 32

On most of the Melanesian islands clearing is a *modus acquirendi*, which proves that there is still free land. In Fiji all land has been appropriated.

§ 8. Landlords, tenants and labourers in Oceania . . . 33

Wherever in Oceania all land is held as property, there are nearly always people destitute of land 330. — The principal cause of this fact is probably the arbitrary conduct of chiefs and nobles, who appropriate the land of their enemies 331, — and even that belonging to their own subjects 333 — Condition of the lowest classes destitute of land. They perform the drudgery for the landlords, and are sometimes heavily oppressed 334. — In Melanesia there are no subjected lower classes, except in Fiji 339 — Subjected lower classes exist nearly always where all land is held as property, and

are not found where there is still free land 341 — In some parts of Oceania the great depopulation has enabled many of the lower orders to obtain land 342 — The labouring classes of Oceania are not attached to the soil, but, being destitute of land, are obliged to apply to the landlords for employment 342 — Position of foreigners 343 — Over-population 343 — Skilled labourers are in a much better position and sometimes held in high esteem 344 — Oceanic labourers as compared with debtor-slaves the former are compelled to work for others by circumstances the latter by social regulations 345 — The state of labourers in Oceania would even be worse but that they are employed in warfare 346

§ 9 Transition from serfdom to freedom in Western Europe . 348

Our theory must also hold with regard to civilized countries as soon as all land is held as property slavery must disappear 348 — Wakefield's opinion 348 — We shall not enter into a thorough investigation of this subject 349 — We limit our remarks to England and Germany 349 — Slavery in Western Europe 350 — Our argument applies to serfdom as well as slavery for serfdom too is a system of compulsory labour 350 — Serfs and free tenants, *Freizügigkeit* 350 — Inaccurate use of the term „free tenants' 351 — Commutation of services for money not identical with transition from serfdom to freedom 353 — Hildebrand's theory natural economy leads to serfdom money economy leads to freedom 353 — Why this theory is erroneous 355 — Hildebrand's theory has been accepted by several writers 363

§ 10 The rural classes of medieval England 364

In the 11th century land was still abundant and servile labour prevailed, rent in the modern sense and free labourers dependent on wages were wanting 364 — During the 12th and 13th centuries the population increased and land became more scarce Disafforesting controversy Free tenants Commutation The landlords become mere receivers of rent instead of agricultural *entrepreneurs* Free labourers 366 — The Black Death of 1349 Labour becomes scarce, much land goes out of tillage Oppression of villeins by landlords Assessment of wages The stock and land lease 368 — 1450—1550 Rise of sheep farming Disastrous consequences labourers thrown out of employment, commons and holdings of villeins inclosed and appropriated by the lords depopulation, rise of pauperism 370 — Disappearance of serfdom Copyhold 375 — Conclusion 375

§ 11 The rural classes of medieval Germany 376

Merovingian period Most of the land is covered with forests. A few slaves and *lites* most cultivators are peasant proprietors 376. — Carolingian period Much land is taken into cultivation, yet land

remains abundant Absorption of the free peasants by the great proprietors rise of serfdom and manorial economy „Licence of destitute of land’ 377 10th—12th centuries Rise in the value of land The whole of the population can still secure land to live upon The class of peasant proprietors disappears The use of labour becomes less Free tenants arise, but free labourers are still wanting 378 — 13th and 14th centuries Extension of the tiable area More value than before is attached to uncultivated land Rights of common restricted Scarcity of meat The use of labour continues diminishing Lords set serfs free in their own interest *Bauernlegen* Free tenants Obligations become territorial Free servants and agricultural labourers 384 15th century Overpopulation Reappearance of slavery (?) 383 — 16th century Evictions 387 Serfdom in Eastern Germany Conclusion 386

§ 12 Open and close resources

38

Slavery, as an industrial system is not likely to exist where subsistence depends on material resources which are present in limited quantity 387 All the peoples of the earth can be divided into peoples with *open* and with *close resources* Definition of these terms Generally speaking among the former only can a system of compulsory labour (slavery or serfdom) exist 389 — Savages with open and with close resources 390 (Close resources in present Western Europe 390 — Regarding secondary causes we shall not enter into many details 390

§ 13 Condition of women

39

Slaves often perform domestic i.e. female labour (compare Rome and Mohammedan countries 391 — Domestic labour is not probably among any agricultural tribe the chief business of all slaves 392 — Slaves help the women in agricultural labour 392 Slavery of women 392 — Melanesian women held in a slave-like state 393 — Though the absence of slavery is perhaps one of the causes of this subjection of women the latter again prevents the rise of slavery 396 .

§ 14 Commerce

39

Numbers of positive and negative cases among commercial agricultural tribes 396 — The term ‘commercial tribes’ used in a wide sense 396 Commerce furthers the slave-trade, requires more work than would otherwise be wanted, and renders development of wealth possible 397 — The last point is very important Luxury arises the wants of the slave-owners, and accordingly the use of slave labour become practically unlimited 397 Wholesale slavery in the United States, and among some tribes of Africa and India 398 — We know little as yet of the general effects of

| | | | |
|--|---|---|------|
| trade 399 | Manufactured goods and raw products 399 | Three categories of commercial tribes 400 | Page |
| § 15 | Slaves employed in warfare | | 400 |
| <p>Instances 400 — Slaves are generally excluded from military pursuits 401 — Causes 402 — Only among some agriculturists of the higher stages are slaves employed in warfare 402 — The coercive power of hunting agriculturists is not great enough to admit of the employment of slaves in warfare 403 — Where political institutions are more highly developed employment of slaves in the army becomes practicable 403 — Military function of slaves in ancient Rome 404</p> | | | |
| § 16 | Slaves kept as a luxury | | 405 |
| <p>The possession of many slaves is indicative of wealth and therefore considered an honour 40 — Slaves and cattle almost the only luxury of primitive times 406 — But this does not prove that slaves are a <i>mere</i> luxury 407 — In many countries part of the slaves are not productively employed 407 — but we have not found any instance of none of the slaves being employed for productive labour 408</p> | | | |
| § 17 | Other secondary internal causes | | 408 |
| <p>Preserving of food as a circumstance furthering the growth of slavery calls for no special remark here 408 — Subjection of tribes does not seem to occur outside Oceania except among cattle-breeding agriculturists 409 — The reason is the insufficiency of the military power of agricultural savages 409</p> | | | |
| § 18 | External causes, especially the slave trade | Recapitulation | 410 |
| <p>Fixed habitations living in large groups and preserving of food call for no remark here 410 — The slave trade Geographical survey 410 — Most slave-keeping agricultural savages are found in those parts where the slave trade has been carried on by civilized and semi-civilized peoples 414 — These savages could not have adopted slavery if it were inconsistent with their mode of life 414</p> <p>Effect of the slave-trade — it makes the keeping of slaves much easier and breaks the <i>vis inertiae</i> 415 — Vicinity of interior races does not seem to have any considerable influence here 417 — Recapitulation of the causes of slavery among agricultural tribes 417</p> | | | |

Chapter I — Conclusion

GENERAL INTRODUCTION.

There exists an extensive literature on slavery. Many of these works are intended for philanthropic purposes, viz. to further the suppression of the African slave-trade, whereas many others contain historical investigations of slavery among ancient or modern nations.

The present volume will not rank among either of these categories, but deal with the general character of slavery as an industrial system. Slavery has played a great part in the social history of mankind. Social life among most of the ancient nations was based upon slavery, and in many colonies it subsisted until far into the present century. On the other hand, in the civilized countries of to-day all industrial operations are carried on with free labour. Whence this difference? Why have slavery and serfdom gradually declined in the course of European history, so that at the close of the Middle Ages they had already in a large degree lost their significance? These problems can only be solved if we know the conditions necessary for the success of slavery as an industrial system, and the inverse conditions under which slave labour must give way to free labour. We shall try to find these conditions, or at least some of them.

We shall use the comparative method, collecting facts and inquiring what regularities can be found in these facts, under what general rules they may be included. But before enlarging upon our method we must say a few words concerning a limitation we have put upon our subject.

Our book, as the title shows, contains ethnological researches. We confine ourselves to investigating the conditions which govern the existence or non-existence of slavery among savage tribes, and the

materials we make use of are exclusively ethnographical materials, i. e. descriptions of savage tribes

Ethnology has already made considerable progress, and is taking a conspicuous place among the Moral Sciences, or, as the Germans more appropriately call them, Sciences of Mind. Yet most ethnologists still proceed in a somewhat narrow and one-sided manner. They generally aim at reconstructing the early history of mankind with the help of ethnographical data. The savages representing primitive man, or at least man in a more primitive state than we can find by direct historical research, they draw inferences from the actual state of savage tribes as to the early state of mankind at large. This kind of study has been very useful, especially in removing narrow views on human development which existed at a time, when the traditions of a few ancient nations were still considered to be the only evidence as to early history. But this should not be the sole, nor even the main object of ethnological investigation. It is sociological laws that we want in the first place. It may be of some interest to know what changes have taken place in early history, but it is far more important to know on what circumstances the existence of each social phenomenon depends. And for this purpose ethnology can be of considerable use. Among savages social life is much simpler than among civilized men, the factors which govern it are comparatively few, and so the effect of each of them can be traced without much difficulty. We can thus, by comparing the institutions of many savage tribes, find sociological laws, several of which will have a wider application and lead us to a clearer understanding of the conditions which govern the social life of civilized nations. For instance, the study of moral phenomena among savages has already given us a deeper insight into morality at large.

The conclusions we arrive at in this book are of two kinds. Some of them apply to savages only and cannot further our understanding of civilized life. For instance, we shall see that settled tribes are more likely to keep slaves than nomadic tribes, but civilized, and even semi-civilized peoples are hardly ever nomadic. Other conclusions, however, have a more general bearing. Thus we shall find that slavery is not likely to exist in those countries, where all land is held as property. And as this has been the case in Western Europe for some centuries, we discover one of the principal causes, perhaps the main cause, why slavery (and serfdom, which is a mitigated form of slavery), have long since disappeared in these countries.

We do not, however, make any systematic inquiry into the bearing of the laws found by investigating the phenomena of savage life on the study of social life among civilized and semi-civilized nations. Where phenomena of civilized life occur to us which bear a striking resemblance to what we find among savages, we mention them briefly, generally in a note. Only in one case we go farther. Where we find that the relation between land and population is a factor of the utmost importance in shaping the lot of the labouring classes, it is obvious that this factor must have played a great part in the social history of Europe, and therefore we adduce some statements of historians in corroboration of our view. Yet even here, it is our object to claim attention for this factor that is commonly overlooked, and clear the way for future research, rather than to give a ready explanation of the decline of serfdom in Western Europe. We are thus justified in making use of only a small part of the literature on this subject.

As we have already said we proceed by an inductive, comparative method. We first collect ethnographical materials. Then we critically determine the meaning and reliability of the statements of our ethnographers. We thus see where slavery exists, and where it is absent. And finally we inquire what are the causes of the observed phenomena.

Some remarks have still to be made on the details of our proceeding. First as to the ethnographical literature.

We have collected our materials quite impartially, without any regard to our ultimate conclusions, which indeed, rest upon a study of the facts, not upon any preconceived opinion. Though there is, of course, much ethnographical literature we have not used, our collection is rather extensive and contains most of the better works. All geographical groups are properly represented, least of all perhaps India, most of the literature on which country (so far as wild tribes are concerned) seems to be wanting in the Dutch libraries. We have greatly profited by being allowed to make use of Dr Steinmetz's schedules, being detailed extracts of hundreds of ethnographical books and articles, somewhat resembling Spencer's "Descriptive Sociology", but far more complete.

The ethnographical literature may not, however, be used without a thorough criticism. We shall often meet with very loose and inaccurate statements, and this book will afford many instances of the careless use of the terms "slave" and "slavery" by ethnographers.

The zoologist and the geologist have only to deal with accounts of their fellow-scientists; but the ethnologist is obliged always to rely on his ethnographers, who generally have no notion of ethnology, and sometimes no notion of science at all. Hence the very bad terminology; hence also the frequent omission of details which would have been very valuable. Yet, regarding the very little that has as yet been achieved in ethnology, we can hardly blame our ethnographers. It is true, if the ethnographical literature were better, ethnology would greatly profit by it, but, on the other hand, even with the help of the existing literature, which, after all, is not so very bad, much more might be attained than is actually done. And as long as ethnology is still in an unsettled condition, it is perhaps better that an ethnographer should have no ideas at all on ethnological subjects, than premature, quasi-scientific, and probably erroneous ideas. Montaigne, one of the most sensible men who have ever lived, speaking of his informant on the cannibals of America, says: „This man whom I had was a simple and rude man, which is a condition conducive to reliable testimony, for refined people observe more curiously and observe more things, but then they gloss them, and in order to force their interpretation on you, they cannot but change the story a little, they never represent you the pure facts, they warp and mask them according to the point of view from which they regard them; and in order to give credit to their judgment and make you accept their view, they readily add something to the matter on that side and exaggerate it. A man must be either very truthful, or so simple that he does not want to construct false inventions and give them a semblance of truth, and is not riveted to a theory.” What we want is, as the same writer has it, *la matière de l'histoire nue et informe*¹⁾ An ethnographer should be taught what to observe and how to observe, and how to record his observations. But when this ideal cannot be attained, it is better to have an ethnographer who only knows that every correct statement of his will interest the men of science, than one whose perceptive faculties are troubled by preconceived opinions. There have been some ethnographers of late years who have laboured under this defect.

We have subjected our materials to a thorough criticism, externally by comparing in each case the descriptions of the same tribe by different writers, and internally by inquiring what importance is

1) Montaigne, *Essais*, Book I Chapter XXX and Book II Chapter X.

to be attached to the statements of each writer, considering the time in which he wrote, his more or less intimate acquaintance with the people described, the general character of his writings, etc.

We thus find where slavery exists or formerly existed, and where it does or did not exist. We always mention the exact numbers of the tribes with and without slaves in the several geographical groups, and afterwards also in the several economic groups. We do not intend these numbers as statistical materials, upon which to base mathematical rules. We only mean to express the results of our investigations in the exactest manner possible. Instead of stating "Slavery in such a group exists in many cases," it is much more accurate to state "Slavery in such a group exists, so far as our observations go, in, say 80 cases." We thus simply follow the method (sometimes mis-called statistical method) first introduced by Prof. Tylor in his article "On a method of investigating the development of institutions," and adopted by Dr. Steinmetz in his "*Entwicklung der Strafe*."

We inquire next what conditions govern the occurrence of the observed phenomena. This part of our work is certainly the most difficult, and it is necessary here to proceed with the utmost caution. Many ethnologists adopt a rather curious method. They have some theory, found by deductive reasoning, and then adduce a few facts by way of illustration. This, however, is quite insufficient. It does not appear whether all existing facts agree with the theory, there may be many instances, not mentioned by the theorist, in which his rule does not hold. The only scientific method is impartially to collect facts and inquire whether they can be brought under any general rule. If we find a hypothesis that accounts for many, but not all, of the observed phenomena, our task is not finished until we have explained the rest by showing the influence of additional factors. Moreover, the negative instances must be accounted for as well as the positive. If we account for the existence of B by the coexistence of A, we must prove either that in those cases where B does not exist A too is absent, or that in such cases there are additional causes which neutralize the effect of A. Ethnological works should not be *cause-ries*, as they often are, but scientific researches.

But we must also be careful not to fall into the other extreme. We shall never be able to arrive at a true understanding of the facts without the help of leading ideas. The facts do not arrange themselves spontaneously, we must try to account for them by

hypotheses which seem *a priori* plausible. When such a hypothesis occurs to us, we have to inquire how far it can go to account for the facts, and, of course, to abandon it if, however plausible it seemed, it proves to be erroneous. By judiciously selecting our hypotheses we can save ourselves much futile labour. For instance, when about to investigate the causes of slavery, it occurs to us that its existence will probably largely depend on the economic state of society, and we inquire whether this be really so. If we began with investigating the effect of some factor that *a priori* seems to have little connection with slavery, e. g. the development of aesthetic sentiments, we should be almost certain to do useless work.

The 'present volume endeavours to come up to the ideal we have set ourselves and developed here. A book of the same size as this might contain a survey of many more subjects connected with slavery. In the last paragraph it will be shown how very much remains unsaid. We treat only a small portion of the subject of slavery. But this portion is treated thoroughly, and we dare say we arrive at some conclusions which will be for ever established, whereas, if we had superficially treated a wider subject, our work, though perhaps more agreeable from a literary point of view, would be nearly useless in a scientific sense.

Slavery among savages has never yet been made the subject of any special investigation. Letourneau's „*Évolution de l'Esclavage*” treats of slavery among all races of mankind, savages included. But he deals with his subject in quite an insufficient manner. His literature is rather scanty, and there is no question of any critical inquiry into the value of his materials. The theoretical part of his work consists of some entirely unproved assertions, not a single systematic investigation is to be found in it. Hence his general conclusion is very meagre and contains only the hackneyed evolutionary series of slavery, — serfdom, — wage system, — socialist paradise, to which he adds „slavery of women” as the very first stage. The scientific value of this book is very little.

There is another book dealing with the general history of slavery, Prof. J. K. Ingram's „History of slavery and serfdom”. This writer confines himself to the historical nations of ancient and modern times, the savages are excluded. Though he makes many valuable remarks, of which, as the reader will see, we have availed ourselves, by far the greater part of his work is purely descriptive. A great difference

between his book and ours is further that he writes „not for scholars, but for the mass of thoughtful and cultivated men and women”¹⁾, whereas we apply to the men of science, not to the public at large. Yet it is an instructive little book. We only regret that the writer appears to agree with Comte's curious theory concerning the relation between slavery and religion²⁾

The general history of slavery is also the subject of a book of Tourmagne's. „There are two volumes by A. Tourmagne,” says Ingram „entitled respectively *Histoire de l'Esclavage Ancien et Moderne*, 1880, and *Histoire du Servage Ancien et Moderne*, 1879, which bring together many facts relating to slavery and serfdom; but they are somewhat loose and uncritical, the author, too, repeats himself much, and dwells on many topics scarcely, if at all, connected with his main themes”³⁾. We are not acquainted with Tourmagne's book on serfdom but as to his *Histoire de l'Esclavage* we fully agree with Ingram.

We have not consulted any monographies on slavery among single civilized nations, with the exception of Cairnes' „Slave Power”, which, though dealing chiefly with Negro slavery in the United States, contains a valuable exposition of the general character of slavery. We shall, however, show that his conclusions, though quite correct so far as colonial slavery is concerned, do not hold with regard to early slavery.

The works of some writers on political economy and social science at large have been of great use to us. We must make special mention of Loria, Wakefield, Bagehot, and the late Dr Dargun, whose excellent essay on the early history of property does not appear to be so generally known as it deserves.

1) Ingram, p. VII. In our notes we always mention the name of the book referred to in the shortest way possible. The full titles will be found in our list at the end of the volume.

PART I — DESCRIPTIVE.

CHAPTER I — DEFINITION AND DISTINCTION FROM KINDRED PHENOMENA

§ 1. *Ordinary meaning of the term „slavery”.*

In most branches of knowledge the phenomena the man of science has to deal with have their technical names; and, when using a scientific term, he need not have regard to the meaning this term conveys in ordinary language; he knows he will not be misunderstood by his fellow-scientists. For instance, the Germans call a whale *Wallfisch*, and the English speak of shell-fish; but a zoologist, using the word fish, need not fear that any competent person will think he means whales or shell-fish.

In ethnology the state of things is quite different. There are a few scientific names bearing a definite meaning, such as the terms „animism” and „survival”, happily introduced by Prof. Tylor. But most phenomena belonging to our science have not yet been investigated; so it is no wonder, that different writers (sometimes even the same writer on different pages) give different names to the same phenomenon, whereas on the other hand sometimes the same term (e. g. matriar-

chate) is applied to widely different phenomena. As for the subject we are about to treat of, we shall presently see that several writers have given a definition of slavery; but no one has taken the trouble to inquire whether his definition can be of any practical use in social science. Therefore we shall try to give a good definition and justify it.

But we may not content ourselves with this; we must also pay attention to the meaning of the term „slavery” as commonly employed. There are two reasons for this. First, we must always rely upon the statements of ethnographers. If an ethnographer states that some savage tribe carries on slavery, without defining in what this „slavery” consists, we have to ask: What may our informant have meant? And as he is likely to have used the word in the sense generally attached to it, we have to inquire: What is the ordinary meaning of the term „slavery”?

The second reason is this. Several theoretical writers speak of slavery, without defining what they mean by it; and we cannot avail ourselves of their remarks without knowing what meaning they attach to this term. And as they too may be supposed to have used it in the sense in which it is generally used, we have again to inquire: What is the meaning of the term „slavery” in ordinary language?

The general use of the word, as is so often the case, is rather inaccurate. „Careless or rhetorical writers” says Ingram, „use the words „slave” and „slavery” in a very lax way. Thus, when protesting against the so-called „Subjection of Women”, they absurdly apply those terms to the condition of the wife in the modern society of the west — designations which are inappropriate even in the case of the inmates of Indian zenanas; and they speak of the modern worker as a „wage-slave”, even though he is backed by a powerful trade-union. Passion has a language of its own, and poets and orators must doubtless be permitted to denote by the word „slavery” the position of subjects of a state who labor under civil disabilities, or are excluded from the exercise of political power; but in sociological study things ought to have their

right names, and those names should, as far as possible, be uniformly employed" ¹⁾).

But this use of the word we may safely regard as a metaphor ²⁾; nobody will assert that these labourers and women are really slaves. Whoever uses the term slavery in its ordinary sense attaches a fairly distinct idea to it.

What is this idea?

We can express it most generally thus: a slave is one who is not free. There are never slaves without there being free-men too; and nobody can be at the same time a slave and a freeman. We must, however, be careful to remember that, man being a „social animal”, no man is literally free; all members of a community are restricted in their behaviour towards each other by social rules and customs ³⁾ But freemen at any rate are relatively free; so a slave must be one who does not share in the common amount of liberty, compatible with the social connection.

The condition of the slave as opposed to that of the freeman presents itself to us under the three following aspects.

First, every slave has his master to whom he is subjected. And this subjection is of a peculiar kind. Unlike the authority one freeman sometimes has over another, the master's power over his slave is unlimited, at least in principle; any restriction put upon the master's free exercise of his power is a mitigation of slavery, not belonging to its nature, just as in Roman law the proprietor may do with his property whatever he is not by special laws forbidden to do. The relation between master and slave is therefore properly expressed by the slave being called the master's „possession” or „property”, expressions we frequently meet with.

Secondly, slaves are in a lower condition as compared with

1) Ingram, p. 261.

2) In the second Chapter and in the continuation of this we shall meet with more instances of this metaphoric (sometimes rather dangerous) use of the term „slavery”

3) Bastian, Rechtsverhältnisse, p. 14.

freemen. The slave has no political rights; he does not choose his government, he does not attend the public councils. Socially he is despised.

In the third place, we always connect with slavery the idea of compulsory labour. The slave is compelled to work; the free labourer may leave off working if he likes, be it at the cost of starving. All compulsory labour, however, is not slave labour; the latter requires that peculiar kind of compulsion, that is expressed by the word „possession” or „property” as has been said before.

Recapitulating, we may define a slave in the ordinary sense of the word as a man who is the property of another, politically and socially at a lower level than the mass of the people, and performing compulsory labour.

We shall inquire next, whether this notion is a practical one for the purpose of our investigation, or whether it requires any improvement. But it may be convenient first to examine, what our theoretical authors have to say on the subject.

§ 2. Use of the term „slavery” in theoretical literature.

Several authors we have consulted give no definition at all. We mention only two of them „Bastian, *Die Rechtsverhältnisse bei verschiedenen Völkern der Erde*”, and: „Giddings, *The principles of sociology*”. Books with such titles might be expected to contain something on the subject¹.

Spencer remarks: „[The captives] fall into unqualified servitude... They belong absolutely to their captors.... They become property, of which any use whatever may be made”²). Although this may not properly be called a definition of slavery, it appears that he uses „becoming property” and „falling into unqualified servitude” (or slavery) as synonymous expressions.

1) Giddings's book, valuable as it is in many respects, is, as a system of sociology, far from complete.

2) Spencer, *Pol. Inst.*, p. 291.

According to Ingram „the essential character of slavery may be regarded as lying in the fact that the master was owner of the person of the slave”¹⁾. Lippert remarks: „The fact, that one man becomes an object of possession by another, characterizes the nature of slavery”²⁾.

Sohm calls a slave „a man who is not regarded as a person, but as a thing. The slave is left to the discretion of the master, who has over him the right of property”³⁾.

Letourneau says: „The rights of the masters over their slaves were always excessive; they were those of a proprietor over his possession”⁴⁾.

Jhering also remarks that „the master's *potestas* may be called property”⁵⁾.

In the first paragraph three principal features of slavery have been enumerated. We see that our theorists attach most importance to the first feature: „property” or „possession”⁶⁾. Whether we can agree with them will be shown in the next paragraph.

§ 3. *Definition for scientific use.*

The present investigation is a sociological one; therefore our definition of slavery has to be sociologically relevant. We have to ask: What is the social value of slavery? Slavery is an organ in the social body performing a certain function, and we have to inquire: How is this organ developed, and how, in the various stages of its development, does it perform its function? But then we must know first what this organ and its function are. Thus only can we exclude from our inquiry organs somewhat resembling slavery, but functionally

1) Ingram, p. 262

2) Lippert, II p. 534

3) Sohm, p. 106

4) Letourneau, p. 492

5) Jhering, II p. 167

6) This view is also held by Wagner and Puchta, whose ample expositions we shall make use of in the next paragraph

quite different from it, and organs wholly different from slavery, but performing the same function or nearly the same. And this is necessary; for the inclusion of such organs would create a confusion fatal to a right understanding.

What then is slavery and what is its function?

The great function of slavery can be no other than a *division of labour*¹⁾. Division of labour is taken here in the widest sense, as including not only a qualitative division, by which one man does one kind of work and another a different kind, but also a quantitative one, by which one man's wants are provided for not by his own work only, but by another's. A society without any division of labour would be one, in which each man worked for his own wants, and nobody for another's; in any case but this there is a division of labour in this wider sense of the word. Now this division can be brought about by two means. „There are two ways” says Puchta „in which we can avail ourselves of the strength of other men which we are in need of. One is the way of free commerce, that does not interfere with the liberty of the person who serves us, the making of contracts by which we exchange the strength and skill of another, or their products, for other performances on our part: hire of services, purchase of manufactures, etc. The other way is the subjection of such persons, which enables us to dispose of their strength in our behalf, but at the same time injures the personality of the subjected. This subjection can be imagined as being restricted to certain purposes, for instance to the cultivation of the land, as with soil-tilling serfs; the result of which is that this subjection, for the very reason that it has a definite and limited aim, does not quite annul the liberty of the subjected. But the subjection can also be an unlimited one, as is the case when the subjected person, in the whole of his outward life, is treated as but a means to the purposes of the man of power, and so his personality is entirely absorbed. This is the institution of sla-

¹⁾ Wagner remarks that this is the main function of bondage in general (*Unfreiheit*). Wagner, pp 374—376, 382

very" ¹⁾). We have not much to add to this lucid description of slavery and its function. The function is a system of compulsory labour, and slavery is the absorption of the whole personality of the forced labourer to this end. As this absorption is properly expressed by the word „property” or „possession”, we may define the slave as *a man who is the property or possession of another man, and forced to work for him.*

This definition, however, on further consideration will show itself capable of some simplification. For when one man is the property of another, this implies compulsory labour. The right of property in this case, the object of it being an man, is a power over that man's will too. The Romans recognised this: „The master has not only a right of property over the slave as over a lifeless thing, but also a power like that over his son, the *potestas dominica*, that is a power over the slave's will” ²⁾). The right of property, that is a legally unlimited power over a man, were useless, if the owner did not influence the man's will; and this influencing is equivalent to imposing labour upon him, labour being taken in the widest sense. A mere physical possession, such as the preserving of captives for cannibal purposes, which Letourneau and Spencer make so much of ³⁾, is socially of little consequence. Possession of human beings, as a social institution, is that which gets hold of the will of its object. Hence it follows, that *slavery is the fact that one man is the property or possession of another.*

This simplification of our formula has this advantage that, in inquiring whether some people has slaves, we need not ask whether there is labour imposed on subjected men. When this does not sufficiently appear, we need not say: We do not know whether slavery really exists here. When we are told that among such a people some men are the property of others (except of course the cases of mere physical possession we

1) Puchta, II pp. 82, 83 Wagner (pp. 382, 395) arrives at the same conclusion, but does not state it so clearly

2) Sohm, p. 106.

3) Letourneau *passim*, Spencer, Pol. Inst p. 294

have hinted at, which are few and easy to recognise), we may be sure that they perform some kind of compulsory labour, and are justified in calling them slaves.

Further advantages of our definition are, that it is the definition given by many theorists, and that it lies within the limits of current speech.

In the following paragraphs we shall mark the distinction of slavery from some phenomena which somewhat resemble it. Of phenomena of this kind we shall consider only those that most frequently occur; other questionable cases will be examined in surveying the occurrence of slavery in the several parts of the globe.

§ 4. *Distinction of slavery from kindred phenomena.*

I. Wives in an abject condition.

In the first paragraph it has already been noticed, that our feminists make very great use of the term „slavery”. We shall see that this equally applies to some ethnographers and theorists describing the state of women, especially as wives, in some primitive societies. To give one instance of each of them: Bancroft says of the Northern Californians: „Although I find no description of an actual system of slavery existing among them, yet there is no doubt that they have slaves. We shall see . . . that women entitled by courtesy wives, are bought and sold” ¹⁾). The theorist we shall quote is Letourneau: „In all very primitive societies woman represents the domestic animals, the beasts of burden which the more advanced societies possess: she is indeed treated as a slave, and this certainly is one of the reasons why slavery has been instituted so late in the course of social evolution” ²⁾).

We may say that such authors use the word metaphorically (as Letourneau certainly does); but this does not exempt us from examining, whether the condition of wives in those cases,

1) Bancroft, p. 349.

2) Letourneau, p. 27.

where according to them it so much resembles slavery, is really slavery. We must not, of course, inquire whether there are instances of female slaves being the wives of their owners, but whether in any case *the* wives as such are slaves. In doing this, we may confine ourselves to observing the condition of wives in Australia, as this condition is commonly described as a striking instance of an abject one. Letourneau remarks: „In the Australian clans slavery, in the sense in which we use the word, did not exist; but one half of the social group, the weaker half, was reduced to servitude; the Australian woman, an indispensable and despised helpmate, was during her whole life burdened with work, ill-used, and in reward often eaten by those whom her unavailing labour had fed”¹⁾. Schurtz, in his little book, states that the treatment of the Australian wives is bad²⁾. Ratzel expresses the same view: „The position of the wife in such circumstances is always a low one. That she is positively considered to be the property of her husband (hence in the Adelaide district „owner of a wife” means husband) is not peculiar to Australia. But to this a number of customs are added here, that, more than among other peoples to which the notion of the wife as a commodity is equally familiar, place her in the back-ground of public and even of family life”³⁾.

Now let us cite some particulars about this abject state of the Australian wives, as given by ethnographers. For the purpose of enabling the reader to take a comprehensive view of the matter, we shall arrange these particulars not according to the different tribes each applies to, but according to the several phenomena bearing on the object of our inquiry. This gives the following result:

A. *The wife is acquired by the husband without her consent being asked.* So among the Dieyerie: „under no circumstances has a woman any say in the choice of a partner”; Powell’s Creek

1) Letourneau, p. 45

2) Schurtz, p. 139

3) Ratzel, II p. 86.

natives: „After being purchased or captured, the woman is generally taken away to a distance and kept more or less isolated with her husband for some months, until she contentedly settles down to the new order of things”; Queenslanders on Herbert River: wives are acquired by betrothal as children, by exchange for a sister or daughter or by capture; N. W. Central Queenslanders: the marriage can be proposed by the male relatives of the woman, or a man can exchange his true blood-sister, i. e. by the same mother, for another's blood-sister; in both cases the consent of the whole camp-council is required; aborigines of N. S. Wales: girls are often betrothed in infancy, or else given away by their father or brother without their wishes being consulted; natives of the Western District of Victoria: betrothal of children is very frequent. A girl when adult can be asked of her father, without any attention being paid to her wishes. When two young men have each a sister or cousin, they may exchange the young women and marry them; the women are obliged to obey; Southern Australians of Port Lincoln: girls are betrothed long before puberty; when adult they must follow their intended husbands whether they wish it or not; S. W. Australians: „In no case is the girl asked for her consent”; natives of King George Sound (W. Australia): a girl is often promised to a man years before her birth, but generally she is acquired by capture; Northern Australians of Port Darwin and the W. Coast of the Gulf of Carpentaria: „Wives are obtained by gifts of parents; in the majority of cases female children when born are promised to men of all ages.... Some men obtain women by stealing them, generally from other tribes, or get them in exchange for a sister”; Tasmanians: the girls are betrothed as children; before marriage they are the property of their father or brother. When the match is broken off, the girl is again betrothed, without her wishes being consulted. Brough Smith, speaking of the Australians in general, remarks: „Men obtain wives by a convenient system of exchange, by conquest sometimes, and sometimes a woman is stolen. By what mode soever a man procures a

bride, it is very seldom an occasion of rejoicing for the female".

B. *The wife is entirely in the power of her husband, and treated accordingly.*

a. Sometimes such *general expressions* are found, as the wife being her husband's „*property*” or „*slave*”. So on Moreton Bay: wives are slaves; on Herbert River: wives are slaves; in N. S. Wales: „the woman is the absolute property of her husband”; in S. W. Australia: „the state of slavery in which they [the women] are all held, is really deplorable”; in Central Australia: the wife is desired by the husband only for a slave; in Tasmania: the women are slaves and do all the menial work. We may add Curr's statement about the Australians in general: The wife „is not the relative, but the property of her husband”. „The husband is the absolute owner of his wife (or wives)”. Brough Smyth too remarks that the husband is called the owner of the wife.

b. *He treats her with contempt.* Among some tribes of Queensland and South Australia women and children are forbidden to eat some kinds of food, especially such things as the men are very fond of. In S. Australia women are despised. In the Moore River District of W. Australia the husband gives his wife only the offal of the chase. Central Australian men „eat alone, and throw what they can't eat to the women”. In N. S. Wales „as her husband walks along, she follows him at a respectful distance If they sit down to a meal, she still keeps behind and gets her share flung to her without ceremony”,

c. *He may sometimes ill-use and even kill her.* On Moreton Bay the wife is often beaten by her husband, especially when he is drunk with rum.

The Queenslander of Herbert River „treats his wife with but little consideration, is often very cruel; he may take her life if he desires”. In N. S. Wales the husband „may do with her whatever he likes, even to the extent of putting her to death, without any challenge from social or tribal law”. The Cammarray beats his wife violently for a trifling fault even a few hours before her confinement. Dawson speaks of the „apparent hard usage to which the women [of W. Victoria]

are subjected". In S. W. Australia „the method he [the husband] adopts for correcting her is so barbarous, that it often occurs that for a single look he pierces her leg with the *ghici*, breaks her head with the *dauac*, and treats her to other similar caresses". The natives of King George Sound treat their wives very badly. In the Moore River District most of the women die a violent death before they have reached an advanced age. If, after an unsuccessful chase, the husband finds that his wife has not enough yams, she is glad to get off with only a flogging. In cases of famine the women are eaten. In Central Australia women are very badly and roughly treated. Nobody aids an ill-used woman. Tasmanian wives were often cruelly beaten by their jealous husbands. According to Curr, the Australian husband may „treat her well, or brutally ill-use her, at his pleasure". The wives „are, occasionally, cruelly beaten, or speared, for even a trifling offence". And Brough Smyth states that „if she shows favour towards another and be discovered, she may suffer heavy punishment, be put to death even".

d. *The husband exchanges and lends his wife.* At Powell's Creek wives are sometimes exchanged. In Queensland and S. Australia „it frequently occurs, that a woman is exchanged, and passes to a number of husbands in a few years". The Moreton Bay aborigines lend their wives to each other and offer them to Europeans. In N. S. Wales „when visitors come to the camp they are accommodated with wives while they remain; and a brave chief, who has done much for their tribe by his prowess, gets the wives of other men sent to him by them as a mark of respect and friendship. Two men may even agree to exchange wives for a time". At Port Lincoln the men frequently exchange wives. The S. Australian husband offers his wife to friends and strangers. In Central Australia the husband lends his wife to his friends. When he goes abroad a husband is given her for the time. A guest is also provided with a wife. Men and parents prostitute their wives and daughters. Another writer informs us that „they often bring them [their wives] up to white men and beg of

them to take them". The natives of Port Darwin „exchange wives occasionally". Tasmanian women were offered to whites for payment. A describer of the Australians in general states that the husband may „keep her to himself, prostitute her, exchange her for another, or give her away to any male of the same class as himself". According to another writer a young man who has no wife sometimes gets one from an old man, who is weary of her.

e. *After his death she becomes the property of his brother.* Among the Dieyerie „the elder brother claims her as she is the wife of his brother". On Herbert River the widow belongs to the deceased man's brother. In N. S. Wales „when a man dies, his widow is the property of his next brother". Among the Kurnai the same custom prevails. In N. Australia „a widow belongs to her late husband's brother". We may add Curr's general statement that „when a man dies, his widows devolve on his eldest surviving brother".

C. *The husband makes his wife work for him.* As regards the Dieyerie we are told that „the more wives a man has, the more indolent he becomes; as they do not till the soil, each wife has to go daily in search of food, gather seeds, roots, and other vegetable products according to the seasons; the men with a plurality of wives stay at home making weapons, ornaments and fishing nets from rushes grown on the banks of the lakes". At Powell's Creek „polygamy is common, more so amongst the old men, who find a plurality of wives useful in hunting for them, and as carriers when shifting camp, etc.". On Herbert River the women procure the food, and for this often make long journeys; they do all the hard work. The husband makes the frame of the hut; she covers it. When travelling she carries all that is to be carried. The husband often keeps the animal food to himself; his hunting has rather the character of a sport; the procuring of food is entirely incumbent on the wife. According to Fraser the fate of the native wife in N. S. Wales is very pitiable. „Married at an early age, she has not only to bear and rear the children, but she does all the heavy work of the family;

in camp, it is her duty to put up the rude windshelter of sticks and foliage which serves them as a home, to make a fire and keep it burning, and to cook the food; on the march, she carries in a bag, resting on her back and slung from her neck, all their portable property, and seated on this bag is her youngest child, . . . in this bag, in addition to the few utensils she requires for domestic labours, she has a yam-stick with which to dig up the numerous native roots which are used as food, a supply of these and other articles of food required for a meal, a quantity of native string and hooks for catching fish For the ready kindling of a fire, whenever it is required, she has to carry with her a smouldering piece of firewood; if she allows this to go out, and thus put her lord and master to the labour of getting fire by friction, or if she in any other way gives him displeasure, he will beat her severely, even till her body is covered with bruises and her hair is matted with blood". At Victoria River Downs Station an old man generally has many wives, „probably to work and get food for him, for in their wild state the man is too proud to do anything except carry a *woomera* and spear." In Western Victoria „after marriage the women are compelled to do all the hard work of erecting habitations, collecting fuel and water, carrying burdens, procuring roots and delicacies of various kinds, making baskets for cooking roots and other purposes, preparing food, and attending to the children. The only work the men do, in time of peace, is to hunt for opossums and large animals of various kinds, and to make rugs and weapons." In S.W. Australia „when, wandering through the woods, the savage observes that the sky threatens rain, he enjoins his wife to erect a hut at the place which he thinks most fit, and where he intends to pass the night". At King George Sound the women look very miserable; they do all the work. In the Moore River District the wife who has not yams enough for her husband is severely beaten (as quoted above). The Central Australian wife is the drudge of her husband. About the natives of Port Darwin we get this information: „The only reason I know of for the practice of polygamy is that, as the

wives have to provide food for their lords and carry all their family possessions when travelling, the husband can lead a perfect life of indolence". Tasmanian women had to procure all sorts of food, except the kangaroo. Ling Roth quotes a description of a Tasmanian repast: „Hitherto we had had but a faint idea of the pains the women take to prepare the food requisite for the subsistence of their families. They quitted the water only to bring their husbands the fruits of their labour, and frequently returned almost directly to their diving, till they had procured a sufficient meal for their families". Curr, surveying the mode of life of the Australians in general, remarks: „Wives have to undergo all the drudgery of the camp and the march, have the poorest food and the hardest work". Brough Smyth enumerates as duties of the wife „building a new camp, getting firewood etc. and on journeys acting as a carrier for all the worldly goods of her husband. They are packed on her back, all excepting his war implements, which he himself deigns to carry".

This picture, surely, is very black. But, unlike Letourneau, we must not view the dark side only. We may remark, first that, as it appears from the foregoing survey, there are with regard to each of the Australian tribes but a part of the enumerated phenomena on record; the black picture is produced by blending the dark sides of each into a whole. And, secondly, the same writers relate some particulars, which prove that the life of the Australian wife is not all darkness. These too we shall arrange in the order observed above.

A. In some cases we are told, that *the girl's wishes* are to some extent *taken into consideration* as to the choice of her husband. On Herbert River the woman sometimes gets the man she loves; she is then very happy. sometimes she runs away with the beloved man. She is fonder of a handsome face than of a good figure; she prefers a wild, open face, especially as to the eyes. In N. W. Queensland, when a young man and a girl are in love with each other, and the camp-council is not opposed to it, they elope, live as husband and wife for some two months, and then return to the camp.

In N. S. Wales a girl, to escape from the betrothed man (often-times an old one), may elope with her young lover; she is then brought back and beaten by her family, „but it may be that she elopes again and again, and, if at last they see that she is determined on it, they let her have her own way”. In Tasmania the woman was stolen from her tribe, but not against her will. Most often the girl succeeded in getting from her father the man she wanted; otherwise she had to run away with him. Curr remarks: „In no instance, unless Mr. Howitt's account of the Kurnai be correct, which I doubt, has the female any voice in the selection of her husband.” This may be true, if we take „voice” in the sense of a legally recognized right; virtually, however, she sometimes has a „voice”, as appears from the instances given here. Howitt's account which Curr alludes to we have not been fortunate enough to meet with. According to Brough Smyth „a young man who has engaged the affections of a girl of a neighboring tribe, agrees with her to run away at the first opportunity that offers”. They are then persecuted by the members of her tribe, as custom and law require, but not energetically. After a few days the young man and his wife return to his tribe. Except at first some scolding and muttering his new state provokes little comment. „His young wife is treated well, and is soon familiar with all the women of the tribe, to which she has become attached”.

B. a, b Sometimes the ethnographers tell of much *affection* existing between husband and wife. At Moreton Bay there is often a great affection. On Herbert River „as a rule man and wife apparently get on very well”. Fraser remarks about the aborigines of N. S. Wales: „the *kuri* or black man is usually kind and affectionate to his *juu*, wife”, „in spite of the hardness of their mode of life, married couples often live happily and affectionately together to a considerable age”. Dawson, after describing the work imposed on women in W. Victoria (as quoted above), adds: „But notwithstanding this drudgery and the apparent hard usage to which the women are subjected, there is no want of affection amongst the mem-

bers of a family". Even Salvado, who so pities the S. W. Australian wife, remarks: „Sometimes I heard a betrothed man say: I love her and she loves me". Of the Tasmanians we are told that they „treat their women kindly". Brough Smyth makes this general statement: „It is hard to believe that even in a lower state the male would not have had the same feeling of affection for his mate and an equal jealousy of love as we see among the aborigines now".

We may add, that the Tasmanian women, though overburdened with work, are described as a merry and laughter-loving kind of people. And Curr remarks about Australian women in general: „In every way the female's looks to us a hard lot; and yet, notwithstanding, I do not hesitate to say that they are, on the whole, fairly happy, merry and contented."

c. *The husband does not always enjoy such an entire freedom of action towards his wife.*

Sometimes, for punishing and divorcing her, *he must have the consent of the tribe*. So in N. S. Wales, in case of adultery „he may complain to the elders of the tribe, and they, on cause shown, decree a divorce; but not if she has children." In W. Victoria „a man can divorce his wife for serious misconduct, and can even put her to death; but in every case the charge against her must be laid before the chiefs of his own and his wife's tribes, and their consent to her punishment obtained. If the wife has children, however, she cannot be divorced". Here we find also some slight traces of protection of the wife by her relatives: „A man is allowed to marry his brother's widow, or his own deceased wife's sister, or a woman of her tribe; but he is not permitted to do so, if he has divorced or killed his wife". In N. W. Central Queensland the wife is avenged by her family. „In the case of a man killing his own *gin*, he has to deliver up one of his own sisters for his late wife's friends to put to death, he personally escaping punishment.... A wife has always her „brothers" to look after her interests". At the initiation-feasts „each woman can exercise the right of punishing any man who may have ill-treated, abused or „hammered" her ... the delinquent not being

allowed to retaliate in any way whatsoever". If these women are slaves, they at least have their *saturnalia* ¹⁾.

We even find cases of *the wife putting a check upon her husband*, especially in a sexual respect. On Herbert River the wife is furious if her husband is unfaithful to her. In N. S. Wales „a wife may similarly complain to them [the elders of the tribe] of the conduct of her husband, and they may order both the man and her paramour to be punished". In W. Victoria „if a husband is unfaithful, his wife cannot divorce him. She may make a complaint to the chief, who can punish the man by sending him away from his tribe for two or three moons; and the guilty woman is very severely punished by her relatives". „A chief who has been married under the law of betrothal, is not permitted to marry another woman for a long time; and should he do so without obtaining the consent of his wife, there would be constant quarreling". At Port Lincoln an old, former wife sometimes forces her husband to desist from taking a young, new one.

Finally we meet with instances of *the wife having a real ascendancy over her husband*. On Herbert River the husband is sometimes led by his wife, and even beaten by her. A curious piece of information we get about W. Victoria. When a wife treats her husband with such persistent disrespect or unkindness as to make him wish to get rid of her, he goes away to some neighboring tribe and tries to bring about her death by sorcery. The wife, being informed of this, repairs thither and entreats him to return, and so a reconciliation is effected.

In Tasmania the husband could divorce his wife; but she could also force him to do so.

d. *Exchange of wives* does not seem always to take place against their will. In W. Victoria wives may be exchanged only after the death of their parents and with the consent of

1) Curr asserts that, if the husband killed his wife, „her death would be avenged by her brothers". But the information we get about the several tribes makes it probable, that this is not true regarding the majority of Australian tribes.

the chiefs, but not if one of them has children. After the exchange both couples live amicably together in one hut, each in a separate compartment. If a man knows that his wife is in love with another, and he is not opposed to it, she can be amicably transferred to the other man with the consent of the chief. At Port Lincoln the men frequently exchange wives; brothers and near relatives have their wives nearly in common. The wife calls the brothers of her husband by the name of husbands. This thus seems rather a kind of group-marriage than a bartering of wives as of commodities.

These two instances point to the possibility that in other cases too exchange of wives may be not so arbitrary an action as at first sight it seems.

As to the *lending of wives*, in some cases it appears that these offer themselves to strangers. In N. S. Wales the husband „is quite ready to bargain with a white man, and with her consent too; for a black woman considers it an honor to be thus courted by a man of a superior race”. The Cammar-ray women prostitute themselves to Europeans for almost nothing, and among themselves without any shame. In Central Australia marriage does not impose any obligation of chastity; the wives always prostitute themselves. On Moore River the wives often have connections with young men; the husbands do not seem to take much notice of it.

e. The *levirate law* sometimes appears in the character of a duty rather than a right of the deceased man's brother. Fraser (describing N. S. Wales) calls it a „refuge” to the widow. Dawson, speaking of the aborigines of W. Victoria, states: „When a married man dies, his brother is bound to marry the widow if she has a family, as it is his duty to protect her and rear his brother's children”. Salvado speaks of the philanthropy of the S. W. Australian, who takes upon himself the care of the wife of an absent friend or parent, or of a brother's widow.

C. Among the Kurnai *the man must hunt* for the sustenance of his wife and children, and fight for their protection.

The last-cited cases of levirate law, too, show that the sub-

sistence of the family does not depend on the wife only. Even the instances quoted above under C provide us with evidence that the men perform some kind of work as hunting the larger animals, making weapons and fishing-nets, getting fire by friction, etc. And what is said here about the Kurnai certainly applies to all these tribes: the husband fights to protect his wife. This being his great and indispensable function, we must not wonder at his not liking to do other work that women can perform as well ¹⁾).

The division of labour between the sexes is not always so unreasonable as at first sight it seems. Hore, speaking of the African Wajiji, very justly remarks: „Much has been said about the unfair division of labour in such circumstances, but when it is considered that a wild man finds scarcely anything to his hand, but must himself cut the wood and the grass to build his house, manufacture his spear and cooking vessels, take his part in tribal duties, and is frequently compelled to seek food in long and laborious hunting expeditions, it will be seen that he often gets his fair share of work” ²⁾). A similar division of labour is admirably described by Pinart, as existing among the Indians of Panama: „I may be allowed to make here a short digression on woman's place in the Indian family.

2) Hore, p. 11.

It is commonly said by those who have not lived intimately with the Indians, that they consider woman as a beast of burden, that to her share falls a life full of troublesome and fatiguing work, and to the man's an easy and idle existence. It may, indeed, seem strange to the superficial observer to see the woman charged with heavy burdens and the man walking before her carrying nothing but his weapons. But if the observer will only reflect a little, he will understand that, whereas the man carries his weapons only, the responsibility and the safety of his wife and children are incumbent on him. The Indian's life is indeed surrounded with dangers; when traversing a savannah, or forest, a hostile Indian may appear at any moment; a tiger, a snake etc. may throw himself upon the travellers. Therefore it is the man's task to be continually on the alert, to have his hands and his movements free, in order to be able immediately to take his arms and defend those who are dear to him. How often have not I seen the Indian, when about to traverse a river, making his family stand still, entering into the water and reconnoitring whether it was not too deep or the stream too rapid; then inspecting the opposite bank to see whether all was right there; then crossing the river again, helping his wife and children to pass through, often even carrying the burdens, and several times re-crossing the river to transport on his back his wife and children. The river being crossed, the man again takes the lead with his arms, the wife and family resume their burdens, and the little caravan continues its way in the same order" ¹⁾).

Another fact, proving that the Australian women are not in every respect considered as slaves, is the great influence they often have in intertribal matters. „The peace-making influence of the women is very great, and has often been observed among many tribes". „The peace-making function of the women is also very characteristically shown by their being employed as international ambassadors" ²⁾). Darwin justly remarks:

1) Pinart, pp. 44, 45.

2) Steinmetz, Strafe, II p. 45

„We thus see that with savages the women are not in quite so abject a state in relation to marriage, as has often been supposed”¹⁾).

The question to be settled now is this: Are these Australian wives, and accordingly all the wives that live in an abject state, to be called slaves? Remembering the conclusion we arrived at in the third paragraph, we may put the question thus: are they objects of possession? Under B a we have quoted several statements of ethnographers calling them the slaves, or the property, of their husbands. We must not, however, forget Ingram's warning against taking a rhetorical use of the word „slave” too literally. The facts recorded under B c, B d, and C are of more interest to us. The husband may do with his wife as he likes: ill-use and kill her, overtax her with work, exchange and lend her. It is but seldom that her family protect her; in but very few cases the man's power is interfered with by the chief or elders of the tribe. Therefore we cannot but admit that she is the property of her husband.

Yet there is a reason, why we are not to bring these wives under the denomination of slaves. We may refer here to the point of view we have taken in determining the nature of slavery. Slavery is an organ in the social body, that in a peculiar manner brings about a division of labour. The Australian wives share the character of this organ as an object of possession. Yet they are not the same organ; for besides being forced labourers they are wives; hence it follows that their relation towards their husbands is wholly bound up with the sexual and family life: it is their character as women, not as labourers, that prevails. We may remember here the mutual affection observed in so many cases by our ethnographers. As the mother of his children, too, the husband is likely to value his wife. We have seen (under B c) that in a few cases she cannot be divorced or exchanged if she has children.

1) Darwin, *Descent of Man*, p. 593

Besides, it is frequently stated, that the Australian aborigines are very fond of their children ¹⁾).

The Australian woman discharges the duties of a wife and a mother, and besides, to some extent, the work that among other peoples falls to the share of the slave; therefore she is not a slave. If she were, her place, in a slave-keeping society, would be entirely occupied by the slave; but no one will doubt whether in any such society there are wives. In an evolutionary sense the slave and the Australian wife differ in this: the Australian wife is a not-yet-differentiated organ, performing two functions, which at a later stage of development will be incumbent on two quite distinct organs: the peculiar function of a wife, and the labour of a slave. This reasoning is not an assertion *a priori*, by a biological parallelism, of a development that must actually have taken place; it is only intended to show the fundamental difference existing between wives however abject their condition, and slaves ²⁾).

We may even go farther and say: *Slavery proper does not exist, when there are none but female slaves* For when females only are enslaved, the reason probably is, that they are valued as women, not only as labourers; otherwise males would be enslaved too. And even where such women are not, all of them, actually treated as wives or concubines, but only kept as labourers, there is no slavery in the true sense of the word. In such cases, the husband keeps his wife or wives subjected; this leads to the keeping of numerous subjected females, who are scarcely to be called wives. But it is always women, as the weaker sex, who are subjected to the men; subjection of labourers, only in their quality of labourers, does not exist. The labourers have the name, if not the state, of wives; this proves that the subjection of labourers as such, i. e. slavery, is not yet developed.

1) See Ploss, II pp 333, 334, and Steinmetz, Das Verhältniss zwisch. Eltern und Kindern, p 613

2) Lippert (II p 535) distinguishes the wife, as mistress of the household from the slave, who has no share in the authority wielded by the master. This may be true, but it is only a small portion of the truth.

We have dwelt at considerable length on this distinction between slaves and subjected wives. There are some more distinctions to be made between slavery and kindred phenomena; but these will not occupy so much space and time.

§ 5. *Distinction of slavery from kindred phenomena.*

II. *Children subjected to the head of the family.*

There was a time, the time of the good old patriarchal theory, when the condition of children in the early stages of social life was thought to be one of complete subjection to the head of the family, the *pater familias*, who had over them an unlimited power, extending to the power of life and death. Carey, among others, holds this view, and very plainly expresses it „By nothing is the progress of mankind in population and wealth made more manifest than by the change in the relation of parent and child. In the infancy of cultivation the one is a tyrant and the other a slave ' ¹).

The adherents of the matriarchal theory have assigned to the Roman-like agnatic family its place as a later product of history; but to the question as to how children were treated in an ante-patriarchal state of culture they have not given much attention.

It is to Dr. S. R. Steinmetz that we are indebted for the first exact inquiry into primitive education. His conclusions, based upon a large amount of ethnographical materials, are these :

„With most savages rational education is out of the question, the children soon growing independent, and when young being either neglected or much petted and spoiled ²); a lesser number of savage tribes show some slight beginnings of education without or nearly without bodily chastigation; in a few cases the children are under strict discipline. In this last set of

¹) Carey, p. 275. See also Wuttke and Maine as quoted by Steinmetz, *Strafe* II pp. 180, 181.

²) Chamberlain (p. 116) justly remarks „Much too little has been made of the bright side of child-life among the lower races”

cases there is to some extent a subjection of the children. „With the power over the mother the father gradually acquired the power over the children.” „The patriarch became master of his children and, whenever circumstances required and allowed it, introduced a strict discipline over them”¹⁾. We may therefore suppose, that there will be instances of children being treated in a somewhat slave-like manner. We shall presently see that there are a few such cases on record in Steinmetz's book.

Among the Apaches the father holds unlimited sway over his children up to the age of puberty²⁾.

Tlinkit boys must render unbounded obedience to their parents and especially to their maternal uncle, to whom, according to the law of inheritance, they are almost more nearly related than to their own father. They have to perform the labour imposed upon them, without any claim to compensation³⁾.

Of the Botocudos we are told, that the father, being stronger than his children, compels them to work for him⁴⁾.

Among the Aeneze Bedouins the young girls work hard; they drive the cattle to the pasture-ground; if one out of the herd is lost, they are severely beaten by their father⁵⁾.

Among the Assja Samojedes the father has a patriarchal power, and punishes at his discretion and according to custom⁶⁾.

In these few cases only is it clearly stated that the head of the family has an arbitrary power. The value of Zu Wied's statement about the Botocudos is much lessened by the same ethnographer telling us that the children enjoy much freedom⁷⁾.

1) Steinmetz. Strafe II pp 179—253, see especially p 252 Dr Steinmetz has recently enlarged upon the same subject in an article entitled *Das Verhältniss zwischen Eltern und Kindern bei den Naturvölkern*

2) Steinmetz, Strafe II p. 190 (after Banoroff)

3) Ibid, p 194 (after Krause)

4) Ibid, p. 196 (after Zu Wied)

5) Ibid, p 199 (after Burekhardt)

6) Ibid, p 201 (after Von Middendorf)

7) Ibid, p. 196.

Considering now the state of the children in the cases referred to here, are we justified in calling it slavery?

The head of the family has power over the children; and so far as it appears from the particulars given by the ethnographers, this is a legally unlimited power, that may be called right of property, and is likely to lead to compulsory labour, as among the Tlinkits and Aeneze Bedouins it certainly does. The condition of these children may therefore be expressed by the word „possession”, our criterion of slavery.

We may even go farther. The condition of slaves is not always very bad; but however kindly treated, they are slaves, are the property of their masters. So with children too. They may not be, as in the cases mentioned above, under strict discipline; yet the father's, or in a few cases the maternal uncle's, power, however moderate a use he makes of it, may be legally unbounded, not restricted by social rules, not interfered with by the community. In such a case the head of the family may be called owner of the child, and is really called so in Roman law, so clearly distinct from Roman practice. „The *patria potestas* of ancient civil law means the full power of the father over the persons subjected to him (the child, the grand-child by the son, the wife *in manu*), the right of death and life (*ius vitae ac necis*) and the right to sell into slavery” ¹⁾. „This *potestas* originally was equal to that over the slaves” ²⁾.

We see that the term „possession” may well be used here. Yet there is a reason that induces us not to call these children slaves, a reason resembling that for which we have ex-

1) Sohm, p. 363.

2) Puchta, II p. 384. As this is not the place to enter into a systematic description of the treatment of children among savages, we have confined ourselves to mentioning the results of Steinmetz's investigations. Yet we will quote here one ethnographical record, that clearly shows the high degree of development of the *patria potestas* possible among savages. „In Flores the sons even of rich families as long as their father lives, at public feasts are dressed like slaves, and also at his funeral; this being apparently the external sign of a strict *patria potestas*, which remains in force till the funeral; until then the son is the father's slave”. Von Martens, p. 117.

cluded the subjected wives. These children may be called the property of their fathers; but this is not the whole, nor even the main part of their condition. The relation between father and child, if it includes subjection, includes much more. There is mutual sympathy and in many respects a coincidence of interest; there is respect on the side of the child; there is on the side of the father a desire to promote the welfare of the child, however much bound up with egotistical motives. There is also physical and mental superiority on the side of the father and inferiority on the side of the child¹⁾; and this in some cases may bring about a somewhat slave-like condition of the latter; but this condition is not an essential part of the relation between father and child; *a fortiori* it is not coextensive with the relation, as in the case of the slave. Biologically expressed: the child is quite another organ, with quite another function, but in some cases, performing in some degree the function of a slave; therefore it is not a slave. We may add, that the child is only temporarily subjected; one day he will be a master himself²⁾. This also bears upon the treatment of the child: the slave is brought up to servility, the child to authority. Children, too, as such can never form a subjected class.

As for adopted children, it is not always easy to distinguish them from slaves. Sometimes they are rather severely treated, especially those captured in war or kidnapped. Tanner was thus adopted by an Indian of the Shahnee tribe. The youngest son of this Indian had lately died, and his wife had told her husband, she could not live if he did not restore her the child. The husband accordingly went off, and came back with Tanner whom he had kidnapped. Tanner was adopted on the grave of the deceased boy, and given an Indian name. But the adoptive father treated him not at all as a son. He

1) Viz. as long as the child is really a child. Savage children are generally much sooner full-grown than those of civilized nations, see Steinmetz, Strafe, II pp. 245—247.

2) See Lippert, II p. 535.

had to do the hardest work, got but little food, and was often severely beaten. If the mother tried to protect him, she was beaten too. Finally the father, regardless of the mother's wishes, sold him to an old Indian woman, who now became his adoptive mother. She treated him kindly, yet made him cut wood, carry water and meat, and perform other kinds of labour, which generally were not imposed upon children of his age. However, he was not a slave. When full-grown, he was considered by the Indians one of their tribe, and married an Indian girl¹).

In the second Chapter we shall meet with more instances of captives being adopted either into the tribe or into one of the families within the tribe. As long as such persons are children, it is often not easy to see whether they are slaves or adopted children, it is not always stated, as in Tanner's case, that they are formally adopted. We must ask then, what becomes of them when full-grown. If they have still a master to serve, it is clear that they are slaves, for if they are adopted members of the community, they will be free when adult, excepting the (most often slight) moral obligations of full-grown children towards their parents. Other facts proving that the captives are slaves, are their not taking share in government affairs, when the tribe is democratically organized, and their being excluded from marriage with native-born women. With the aid of these criteria we shall try, in every particular case, to decide whether the captives are slaves or adopted members of the community. What has been said here of captives, equally applies to purchased persons.

The last two paragraphs show that there is still something wanting in our definition. Not every state of possession is slavery; those arising from family relations are to be excluded. Thus only can we come to a true understanding of the signification of slavery. For wives and children may accidentally be forced labourers and the like; the slave only is *ex*

1) Tanner, pp 8—17, 114; see also p 315.

definitione a subjected person, a forced labourer, an object of possession. Wives and children there would be, and there are in many cases, without subjection; slaves there are not where there is not subjection and compulsory labour. A society that begins to keep slaves, develops a new organ with a special, well marked function; and it is the evolution of this organ we are to trace in the following Chapters.

Our definition therefore wants an addition. We may now put it so: *Slavery is the fact, that one man is the property or possession of another beyond the limits of the family proper*

§ 6. *Distinction of slavery from kindred phenomena.*

III. *Members of a society in their relation to the head of the community.*

Bastian, after remarking that in a social community nobody is literally free, gives a great number of quotations, describing widely different kinds of subjection, and among these some few, where the subjects of a despot are called his slaves or his property. „The Siamese are all (even marked) slaves of their king” „The subjects of the king of Djagga are slaves, who may not marry without his consent.” „In Usumbara all are slaves of the king” „The absolute rulers dispose of all their subjects as their property (even without having acquired a right by the subjects having transgressed the law), and even mark with their badge the different working-guilds, as is done by the king of Siam.” „The princes and princesses on the Congo have the right to sell any one who is not a prince like themselves” 1).

What Bastian means by heaping up these various quotations, without any order or attempt at an explanation, is not clear. We, however, must not follow his example, but inquire whether the word „slave” is rightly used here, whether the subjects of a despot may be called slaves. A few moments of conside-

1) Bastian, *Rechtsverhältnisse*, pp 15, 15 note 2, 187, 187 note 2 Post (Ethn Jur 1 sp 358) also speaks of subjects being the slaves of the king

ration will show that they may not. For however great the power of the chief, the king, the despot, in a word the head of the community, over his subjects, they are not his property. „Property” supposes a power of the master, pervading the whole life, personal, domestic and social, of the slave; so great a power over his subjects a chief never has. The following reasoning will make this clear. Slavery would not be capable of much development, if it depended upon the master's personal superiority only; for slavery to become a social system, the master's power over the slave must be recognized by the society.

The slave lives in a society that regards him as a slave; slavery cannot exist where there is not a society of freemen. Therefore the despot, however great his power, is not as such a master of slaves. The slave-owner has the community on his side; the chief has subjects who themselves compose the community. Looked at from the practical side, the chief's power contains much more of voluntary submission than the slave-owner's. A chief never has the whole person of the citizens subjected in his own behalf; he may exact some performances for his personal benefit, but the restrictions put upon the subjects, encroaching on their freedom in private life, will generally be measures taken in the (real or supposed) interest of the community, and approved of by the community. These restrictions are mutual, and arise from the social connection itself; this is not, as in slavery, using one person as a means to the purposes of another definite person. This yet more distinctly appears, where not a single man imposes these rules, but the council of citizens. In a communistic society there would be an entire absence of personal freedom; yet there would be no slaves, as there would be no freemen whom they could serve.

It need hardly be said, that a chief may keep slaves like any other freeman. The public power as such, the state, also sometimes keeps slaves (e. g. the *servi publici* in Rome). But these slaves are quite distinct from the main body of citizens,

Sometimes it is stated, that the chief, or the public power.

has slaves, whereas no mention is made of any other slaves. In such cases the slaves generally become such as a punishment for some offence. Where such a state of things exists, we may not speak of a slave-keeping people. For here the power of the government is so great, that it can avail itself of the labour of the citizens; whether this is done by imposing an equal amount of labour on all of them, or by selecting a few persons for this purpose and keeping them in a slave-like state, does not matter much. Besides, slavery here cannot have the same influence on social life it generally has; for every freeman has to work for himself. This kind of slavery may be compared with the tread-mill and other kinds of penal servitude existing in more civilized societies. And we may not speak of a slave-keeping people, where the only slaves are criminals, who become the slaves of him who represents the public power, any more than we can say that slavery exists in those civilized countries, where penal servitude is still practised.

One more remark has to be added here. Hitherto we have used the terms „possession” and „property” synonymously as indicating the nature of slavery. In this paragraph it has been shown, that an essential feature of slavery is its being recognized by the community. Therefore we prefer the term „property” that, better than the other term, conveys the notion, not only of a virtual subjection, but of a subjection considered legal in those communities where it exists.

§ 7. *Distinction of slavery from kindred phenomena.*

IV. Subjected tribes, tributary provinces; lower classes; free labourers.

We shall meet with instances of tribes, the members of which are bound to perform some kind of labour for other tribes or for the members of the latter.

This is not slavery; for slavery is subjection of one individual to another, and a subjection that absorbs the whole personality of the subjected; and under such circumstances it is

not possible that the subjected lead a tribal life. Therefore, where the subjected are described as forming a separate tribe, we may be sure that they are not slaves. Ingram justly remarks that „the lowest caste may be a degraded and despised one, but its members are not in a state of slavery; they are in collective, not individual, subjection to the members of the higher classes”¹⁾. What Ingram says here of the lowest caste, often applies to subjected tribes.

That conquered districts, bound to pay a tribute in kind or money, do not consist of slaves, is clear.

The foregoing remarks would be almost superfluous, were it not that some ethnographers in such cases spoke of „slave tribes” and „slave districts”.

Lower classes can be of different kinds. Where they are only considered inferior to the upper classes, or excluded from governmental functions. it is easy to see that they are not slaves. Greater difficulties are presented by some other cases. Sometimes a lower class consists of free labourers. Now theoretically free labourers are easy to distinguish from slaves: the slave is compelled to work, the free labourer voluntarily submits to it. But the accounts of our ethnographers do not always make it clear, which of these two kinds of labourers we have to deal with in any particular case. When a labourer lives in the house of his master and is wholly dependent on him, it may be rather difficult at first sight to decide whether he is free or a slave. Sometimes the details given are sufficient to settle the question; if not, we shall have to leave it undecided.

A lower class can also consist of serfs. What they are, and what is the difference between them and slaves, will be shown in the next paragraph.

§ 8. *Distinction of slavery from kindred phenomena. V. Serfs.*

What we have said of free labourers applies also to serfs:

1) Ingram, p. 3

to draw the theoretical line of demarcation between them and slaves is not so very difficult; but practically it is not always easy to decide, whether a subjected class we get some information about consists of slaves or of serfs; sometimes even, because of the unstable terminology and the scanty information, it is quite impossible. But there are several unequivocal cases of serfdom, too, on record in history. Mentioning a few of these will suffice to give the reader a clear idea of its nature as distinct from slavery.

In Germany *Leibeigene* was, in the earliest times, synonymous with slave. The law placed the *Leibeigenen* on a level with the domestic animals. The master had the *ius vitae ac necis*, an unlimited right to sell them, the right to exact from them all possible services, to marry and divorce them. The owner of the *Leibeigene* was also owner of his goods and chattels. The lord was responsible for any damages caused by his servant, as for those caused by his horse, and might claim indemnity if any one injured his man. But gradually this slavery was mitigated into a state of subservieney. First the claim to unlimited services was waived, and on the *Leibeigene* were imposed definite *Roboten* (labour dues) and tributes. He had to work on fixed days, to perform fixed services to pay fixed sums. His earnings legally still belonged to the lord, and the latter succeeded to his goods, but from the 13th century the lord's right of inheritance dwindled into a present (*mortuarium*). From the 14th century the serfs acquired a usufruct of the soil they tilled, and so their obligations assumed more or less the character of a quit-rent. Sometimes they were even allowed to choose another lord. In the Frankish empire the lords were already forbidden to sell them abroad, from the 13th century they lost the right to kill them, and afterwards also the right to whip them. The church took away from the lord the right to divorce his serfs, if the marriage had been contracted with his consent. The *ius primae noctis* remained longer. Moreover, the relations of the serfs towards others were gradually recognized by law, at first only as to unjust acts, later on as to contracts. And so, when at

last serfdom was abolished, the only changes effected by this were: allowing of the right of emigrating, abolition of the marriage-consent and of the court-services and personal tributes.

Thus Siegel describes the development of serfdom in Germany ¹⁾. Other writers come to nearly the same conclusions. According to Brunner, there was among the Western Germans a class between freemen and slaves, called *Liten* or *Aldien*, a hereditary class, whose position was secured by law. They had the right of acquiring property and making contracts; they could by emancipation become fully free, or ransom themselves by means of their fortune. To marry they wanted the consent of their lord. They had the right of feud (*Fehderecht*), and when they were killed a *wergild* was paid, that fell partly to the lord. Their right of inheritance was originally not recognized ²⁾.

Schroder remarks, that the difference between freemen and subservients (*Horigen*) consisted in this, that the landed possessions of the latter were smaller and liable to tribute. Moreover, they had no *connubium* with freemen, nor any political rights; the *wergild* paid for them was one half of that paid for a freeman ³⁾.

In medieval France a similar state of things prevailed. There were no longer slaves, but serfs „Serfdom is a transitory stage between slavery and entire liberty. The serf of the middle ages is not, like the ancient slave, indissolubly riveted to his condition, deprived of rights by his very birth, placed on a level with the beasts of burden of his lord's estate. Public opinion is favourable to him.” „The facts agree with the doctrine” The serf has some means of acquiring property; he may marry and have legitimate descendants, who will succeed to his goods; he may give evidence in the courts; he may purchase his liberty by means of his *peculum*. By getting some profits he is interested in the cultivation of the soil.

1) Siegel, pp 291—293.

2) Brunner, I pp 101, 102

3) Schröder, p 41 He states that these *Horigen* were also called *lati* or *aldio* (l c., p. 40), so they are the same class as those described by Brunner.

Giving his labour to the land, he may expect to enjoy the fruits of it, by paying fixed tributes. By marrying his children to free women he secures the liberty of his offspring. By paying an indemnity he acquires the succession to his father's inheritance, and the right of property over his savings.... He may dispute the tributes (*tailles et cens*) which the lord levies on the tenement he cultivates, invoke an enquiry of experts who attest his means, contract to pay a fixed annuity and so know beforehand what profit he may depend upon" ¹⁾).

With these serfs may be compared the Roman *coloni*. „The *colonatus* consists in this, that men are inseparably attached to a landed property for the purpose of cultivating it.... This connection with a determinate estate, from which the *colonus* might be severed only in some cases fixed by law, brought about an approximation of the *colonus* to the slave (as *servus terrae*), but also a difference between them, a security for the *colonus*, which protects him from the lord's arbitrary power. Hence the *colonus* stands with regard to the lord on the free footing of one bound only to comply with the yearly canon, *annua functio*, a tribute fixed by contract or custom, which he has to pay to the lord, generally in products of the land" ²⁾).

The foregoing statements once more prove the sufficiency of our definition of slavery. As soon as the forced labourer is no longer entirely at the disposal of the lord, the latter being entitled to fixed services and tributes only, such a state of things is called serfdom, or *colonatus*, or subserviency, but not slavery. This agrees with our definition of slavery. The slave, as we have remarked above, is the property of his master, whose power is in principle unlimited, not restricted to fixed performances. Therefore, even if the writers referred to here called such institutions as serfdom and *colonatus* slavery, we are not to do so; but we may regard it as a corroboration

1) Gasquet, II, pp 281, 282

2) Puchta, II p 97

of the conclusion we had arrived at before, that such writers, most of whom have not made any special research into the nature of slavery, when they meet with such an institution as serfdom, feel that they are not to call it slavery.

Now let us look what our theorists have to say on the subject.

Ingram remarks: „The transition to serfdom took place in civic communities, when the master parted with or was deprived of his property in the person of the slave, and became entitled only to his services, or a determinate portion of them. In rural life, where the march of development was slower, the corresponding stage was reached when, in accordance with the fundamental principles of feudalism, the relation between the lord and serf, from being personal, became territorial” ¹⁾).

The first words here perfectly express the truth: when the master loses „his property in the person of the slave”, he is no longer a slave-owner. What follows, that the master „became entitled only to his services”, is less correct; for he who is entitled to all the services of another is his owner; just the limiting of the master’s right to „a determinate portion of them” is the change from slavery to something else. If I may require all the services a man can perform, I am his owner; if I am restricted to a determinate portion of them, I am not.

Spencer says: „As the distinctions between different forms of slavery are indefinite, so must there be an indefinite distinction between slavery and serfdom, and between the several forms of serfdom. Much confusion has arisen in describing these respective institutions, and for the sufficient reason that the institutions themselves are confused” ²⁾).

This consideration, however true, will not prevent us from drawing a theoretical line of demarcation. Not a single social institution is practically strictly separated from kindred institutions; yet we cannot understand such institutions, unless we make a distinction, and not an „indefinite” one.

1) Ingram, p. 262.

2) Spencer, Ind. Inst., p. 472.

Letourneau, after describing the state of the *colonus*, adds: „In a word, he was not an object of possession, a slave, but only a proletarian attached to the soil.” In another passage he remarks that slavery always undergoes same mitigation in the course of civilization: „Less and less is the person of the slave himself oppressed; one is contented with exploiting him, bereaving him in a larger or smaller degree of the fruits of his labour, in a word the slave becomes a serf”¹⁾.

These quotations may suffice to show that our view of the matter is held by theorists as well as by historians.

The serf, therefore, is not a slave, because he is not the property of his master, and the particulars of serfdom related by our historians provide us with means of more clearly understanding the practical meaning of this notion „property”. It means a power that, however leniently exercised in many cases, is in principle unlimited. Among many peoples the master may ill-use and even kill his slave, without the law taking any notice of it. And even where his power is restricted by social regulations, he may have a right of property, viz. if his authority be in principle unbounded, and any limitation put upon it suppose a special legal provision. Our social reformers of to-day express the desire to make a great change in the regulation of the right of property. Till now, in Roman and Romanized modern law, the proprietor has had a right to do with his property whatever he is not by special rules forbidden to do¹⁾; they will place the right of property on a level with the other *iura in re*, so that the proprietor may do nothing but what he is by law allowed to do. Now such a reform as these people intend to bring about as to property in general, has taken place wherever slavery has passed into serfdom. The slave-owner may do with his slave whatever he is not by special laws forbidden to do; the master of a serf may require from his man such services and tributes only, as the law allows him to require.

1) Letourneau, pp 423, 355, 356

2) See Dargun, p 3

The slave-owner has a right of property; the master of a serf has, so to speak, a *ius in re aliena*.

§ 9. *Pawns or debtor-slaves.*

In the course of our investigation it will be shown, that among some peoples a debtor, unable to pay a debt he has contracted, becomes the slave of his creditor. Sometimes such persons are ordinary slaves; but pawns or debtor-slaves in the restricted sense (who are of frequent occurrence in the Malay Archipelago, Dutch *pandelingen*) are a class whose slave-state is conditional; they become free as soon as the debt is paid by or for them; the creditor cannot refuse to accept the money. Because of this great difference between pawns and ordinary slaves (who generally have not a right to be ransomed), most of our ethnographers do not call the former slaves, but give separate descriptions of slavery and pawning.

The question arises, and has to be settled here, whether we for our purpose have to call these pawns slaves. We shall quote here one description of pawning. Among the Tshi-speaking peoples of the Gold Coast of West Africa „a pawn is a person placed in temporary bondage to another by the head of the family . . . either to pay a debt, or to obtain a loan When a person is pawned on account of a debt, the services of the pawn, even should they extend over a considerable number of years, count for nothing towards the liquidation of the debt; and a pawn has to serve his master, until the amount of the original debt with 50 per cent. interest, is paid by the person who pawned him”¹⁾.

Here the debtor pawns one of the members of his family; among some other peoples (e. g. in the Malay Archipelago) he pawns himself; this is not essential. The main fact is that the pawn is in „bondage”, however temporarily, that he „has to serve his master.” Therefore, as long as the debt remains unpaid, the pawn is in the same condition as a slave. He has

1) Ellis, Tshi-speaking peoples, p. 294.

not to perform a fixed amount of labour, he must serve his master without any limitation; the master has over him a power that is, in principle, unlimited. Now we have to inquire: Is this pawn a slave, i. e. is he the property of his master? In a legal sense the creditor has not a right of property over his pawn; his right agrees with a kind of *pignus* which the Romans called *antichresis*, i. e. something yielding profit was handed over to the creditor, who utilized it instead of receiving the usual interest ¹⁾. Yet the right of the holder of the pawn bore much resemblance to that of the owner: he had a *utilis in rem actio*, a *vindicatio pignoris* ²⁾. We, for our purpose, may classify the pawns among the slaves, if we can prove that sociologically a system of pawning performs the same function as a slave-system. And this certainly is the case. The same system of compulsory labor, the same subjection of the entire person exists, whether the subjected are perpetually slaves or temporarily pawns, viz in those cases where, as among the Tshi-speaking peoples, the master's power is in principle unlimited. Where pawns have a fixed amount of work to do, they are temporary serfs; but where (as is most often the case) no limit is put to the amount of work the master may exact from them, they are temporary slaves, and as long as they are slaves, take the same place as other slaves in the social system.

CHAPTER II — GEOGRAPHICAL DISTRIBUTION OF SLAVERY.

§ 1. *Introduction.*

Having now determined what is the meaning of the term „slavery”, we are about to inquire, what is its social signification, what place does it occupy in those societies where it formerly existed or still exists? But then we must first know, whether slavery exists among all savage tribes, and, if not, whether it is confined to certain races of men or to certain parts of the world; and further, whether it is found on all levels of lower culture, or on some only, and if the latter, on which. The solution of these problems requires a survey of the occurrence of slavery among wild tribes in the several parts of the globe. This survey will occupy the present chapter.

A few words have still to be said about our method of ascertaining the existence or non-existence of slavery in every particular case.

To one unacquainted with our science the task to be performed now may seem very easy. we have only to consult the ethnographical literature bearing on any tribe, and to look whether slavery is mentioned; if it is mentioned in an affirmative sense, slavery exists; if in a negative sense or not at all, slavery does not exist. But every one familiar with ethnographical literature knows that it has not to be used in such a rough-and-ready manner. The statements of our ethnographers are not to be accepted without much caution and a thorough criticism.

The observance of the following rules will, so far as we can judge, give to our conclusions the highest possible degree of probability.

1°. If it is stated that slavery exists, is this sufficient evidence of its existence? Our definition, arrived at in the first chapter, lies within the limits of ordinary language; there-

fore it is probable that our ethnographers have used the term in the same sense we attach to it. There are, however, many cases in which the words „slave” and „slavery” are applied to something quite different from their true meaning, as will be seen from our survey of the matter. Thus it is necessary to ask for more evidence than is given by the mere term „slavery”.

a. If it sufficiently appears that among some tribe there are men considered to be the property of others, we need not doubt whether slavery exists.

b. If this is not clearly proved, there is still one particular, that being mentioned makes the existence of slavery very probable, viz. the fact that people are bought and sold within the tribe, except of course women sold for wives. For other kinds of subjected persons, serfs, lower classes, and subjects of a despot, are not bought or sold, at least not within the tribe. Beyond the limits of the tribe a man may be sold without previously having been a slave. Thus some African despots sell their subjects to Arabian slave-traders; such a sale does not prove that slavery exists within the tribe. But when a man is sold within the tribe, either he was already a slave, or he becomes such, e. g. as a punishment; in both cases slavery is practised by the tribe ¹⁾.

c. If the particulars on record are quite insufficient to determine the nature of the alleged slave-state, the possibility of a mistake is much lessened by several writers, independently of each other, stating that slavery exists.

d. Finally, the general trustworthiness of the writer or writers must be taken into account.

2^o. If we are told that there are no slaves, it is very probable that slavery really does not exist, for slavery is a phenomenon rather easy to observe, and the ethnographers are

1) Sometimes, however, children are sold to adoptive parents within the tribe. Such is the case in Greenland, see Crantz I, p. 178. But these are exceptional cases, so, when no particulars are given, we may suppose that the purchased persons become slaves and not adopted children.

generally inclined to use the word in a too wide rather than in a too restricted sense. There is no need here for the extreme scepticism with which we have to receive an assertion of any people having no religion¹⁾. This does not prevent, of course, that if we find the existence of slavery denied by a writer who is generally badly informed, we may reject such an assertion.

3^o. The greatest difficulties are presented by those cases in which no mention is made of slavery. Here the utmost caution has to be observed.

a. If it clearly appears from the description, that there are people considered to be the property of others, without the word „slavery” being used, the conclusion is evident.

b. Perhaps some facts are mentioned which make the existence of slavery highly improbable. We shall see that the main source of slavery is captivity in war; so, if it is stated that no captives are made, or that the lot of the captives is something else than slavery, the non-existence of slavery is probable. But even then it is not quite certain there may still be slaves, acquired by other means. Further: if it is stated that there are no social classes, or if the classes are enumerated and slaves are not among them, there is a strong presumption that slavery does not exist. Yet here too there is no certainty; for slaves, among savage tribes, have not always the aspect of a social class. The description of the division of labour between the sexes may also suggest to us the non-existence of slavery. When we are informed that the men do some kinds of work and the women some other kinds, we are inclined to think: if there were slaves, their special work would be mentioned too. But this argument is most dangerous; for the slaves very often have no special kind of work allotted to them.

We see that none of these criteria prove quite reliable. Yet, taken together, they give a high degree of probability. And it is not even necessary that all of them can be ascer-

1) See Tylor, *Primitive Culture*, I pp. 417 sqq.

tained. If an ethnographer, known to be trustworthy, gives us an elaborate description, pretending to be a picture of the whole social life of the tribe he describes, it were a wonder if he had entirely omitted slavery, while it existed; the more so as this phenomenon is not so difficult to recognize. The same argument obtains *a fortiori*, when several such descriptions of the same tribe exist.

4^o. In doubtful cases we may take into account the state of the group to which a particular tribe belongs. It may be that in the general descriptions of a group no mention is made of slavery; that, further, all tribes belonging to this group of which we are well informed prove to have no slaves. If, then, the information we get concerning a particular tribe belonging to the same group, is not complete enough to rely upon, there is a strong presumption that this tribe will be in the same state as the rest of the group, i. e. that it does not keep slaves. Under the same conditions we may suppose that a tribe belonging to a slave-keeping group keeps slaves. The term „group” has to be taken here in a sociological, not in an anthropological or linguistic sense, and its application must be somewhat restricted. It must consist of tribes, the institutions of which closely resemble each other; e. g. Micronesia is a group in this sense, North America is not. It is almost superfluous to add, that this group-argument may be used only to strengthen existing, but insufficient, evidence.

We confine ourselves here to the phenomena of savage life; therefore we shall exclude the semi-civilized peoples. An exact distinction, however, between these two classes of peoples has not yet been made¹⁾; so we are fully aware of the possibility of mistakes, made here in this respect. As we were not able to apply any exact criterion, we have more or less followed our general impressions, paying most attention to the development of political institutions. So for instance we have excluded the Kabyls of Northern Africa, because their detailed

1) The distinction between the several stages of culture will be enlarged upon in the second Part.

legal system, as described by Hanoteau and Letourneux, proves that politically they have passed beyond the stage of savagery. And a developed political organization cannot exist without profoundly marking such an institution as slavery.

We shall find that several savage tribes have to a considerable extent been influenced by civilized or semi-civilized nations. In such cases the question arises: have we to deal here with phenomena of unadulterated savage life? This question is important and must be paid full attention to. We shall see that many savage tribes in their true aboriginal state have been acquainted with slavery, whereas many others when first discovered did not practise it; so neither the existence nor the non-existence of slavery must needs be due to foreign interference; either may be aboriginal, and must be supposed to be so wherever there is not a strong presumption to the contrary¹⁾. But there are also many cases in which foreign influence has undoubtedly been at work. It may, then, have worked in different ways; and the results it has led to are to be distinguished accordingly.

A. The disappearance of slavery under civilized or semi-civilized influence may have taken place in the following ways:

a. The savage tribe has so much coalesced with or been assimilated to the influencing nation, that it has entirely adopted the institutions of the latter. We must, then, take into consideration only the accounts, if there are such, of the social institutions of the savage tribe in its aboriginal state. What are its institutions now has no interest to us.

b. Measures have been taken by a civilized nation on purpose to abolish slavery. Then we, for our purpose, must consider the savage tribe concerned as keeping slaves, and pay attention only to the descriptions of its institutions as they were before the abolition.

1) When similar phenomena are found among different peoples, modern ethnology supposes that they have spontaneously originated among each of them, viz. as long as the contrary is not made probable. See Steinmetz, *Endokannibalismus*, pp 56, 57, and Darwin, *Descent of Man*, p 141.

c. The savage tribe has remained savage, but intercourse with foreigners has so much changed its political or economic condition, that slavery no longer exists; e.g. formerly it acquired its slaves in war, but warfare has become impossible. Such facts, if we find them, will be very valuable to us; for what has been done here by a civilized nation may in other cases have been done by savages; therefore such facts suggest to us a manner in which we may account for the non-existence of slavery in cases where we should expect to find it.

B. Slavery may have originated under civilized or semi-civilized influence in the following ways:

a. The savage tribe has coalesced with or been assimilated to the influencing nation. Here the same may be said as under A, a.

b. Foreign intercourse has so much changed its political or economic condition that slavery has become possible. Here, as long as the savage tribe remains savage, we have to deal with a phenomenon of savage life. For the same changes brought about here by intercourse with a civilized or semi-civilized nation, e. g. the accumulation of wealth by trade, may also be brought about by intercourse with other savages. The civilized nation does not here influence the savage tribe in its quality of civilized nation, but only in its quality of a foreigner having intercourse with the tribe.

Two exceptions, however, have to be made, one real and one apparent.

The real exception is this: we shall see that some Indian tribes of North America, though formerly unacquainted with slavery, in later times kept Negro slaves, purchased from the whites. Now these Negroes were in an exceptional condition, transported into a foreign continent and living among foreign races. If the same Indians had tried to keep Indian slaves, the latter would perhaps have run away; but if the Negroes had escaped, they would have been recaptured by whites or Indians. This case, therefore, has to be omitted from our survey of slave-keeping savage tribes.

The apparent exception is this: there are several tribes that keep slaves for sale only, not for their own use. If they had

no opportunity to sell their slaves, they would not keep any. But this is no true exception: for whether these slaves are sold to savages or Arabians or Portuguese, it is clear that a tribe that makes slaves only to sell them abroad is not a slave-keeping tribe in the true sense of the word. To its social organization slavery is entirely foreign.

The ensuing paragraphs will show which savage tribes keep slaves and which do not keep any. The groups into which we have divided the several tribes are mainly geographical, not intended to answer any anthropological purpose. As long as the meaning of the term „race” is so unstable as at present, we think it better not to operate with it. Our groups are nearly the same as those given by Schurtz in his *Völkerkunde*.

At the end of each paragraph its result will be mentioned. The „positive cases” are the tribes which probably keep slaves, the „negative cases” those which probably do not keep slaves. Under the head of „no conclusion” we have given the cases in which the probability that slavery exists is nearly as great, or as little, as the inverse probability. The tribes, the names of which are printed in italics, are those which afford „clear cases”, i. e. where the probability nearly amounts to certainty.

At the end of the Chapter a brief recapitulation will show the occurrence of slavery among savages in the several parts of the globe.

When, in the following paragraphs, we say: „Such a tribe keeps slaves,” or: „Such a tribe does not keep slaves,” this does not imply that the same state of things still prevails. The tribe we speak of may have died out; or, where slavery existed, it may have been abolished. When we know that such a thing has taken place, we shall use the past tense. But in many cases the only information we have got concerning some tribe dates from 50 years back or even longer; and we do not know what has become of this tribe in the meantime. Then, not to be obliged always to use such tedious formulas as: „In Mr. X.’s time slavery existed among such a tribe,” we shall simply say: „slavery exists.” Whether it

still exists may be of much interest to a philanthropist; but to us, for the purposes we have set ourselves in the present volume, it is quite immaterial.

§ 2. *North America.*

1. *Eskimos.*

Rink's account applies especially to Western Greenland at the time of the first European settlement, but may be taken as a general description of the Eskimos ¹⁾. According to him the family in the restricted sense comprehended foster-children, widows, helpless persons adopted as relatives and more or less treated as servants. They were considered as subordinate members of the family. The children were never, and still less the servants, subjected to any corporal punishment ²⁾. He then describes their social organization, but makes no mention of slavery ³⁾. The question remains whether these helpless persons are to be called slaves. This does not very clearly appear; but, happily, we have more detailed accounts of the several Eskimo tribes.

Crantz, in his beautiful description of the *Greenlanders*, gives many particulars about their servants. Mothers of illegitimate children are despised; sometimes a childless person buys her children. When a married couple have no children or no full-grown children, the husband adopts one or two orphan boys, who help him in his work and must provide the family with the necessities of life. The same is done by the wife with daughters of others or with a widow. Although the adopted youths are employed as servants, they are free from any compulsion and are considered as the future lords of the house. The adopted maid-servant or daughter can leave when she likes. A man will never beat his man-servant, and were he to touch a maid-servant, he would incur great disgrace ⁴⁾. We see that the condition of these servants is not

1) Rink, p. 5

2) Ibid., pp. 24, 25

3) Ibid., pp. 24—34

4) Crantz I., pp. 178, 186.

slavery. The boy is the future lord of the house, the girl may leave when she pleases. Servants are only required to occupy the place that in a normal household is taken up by the children. Labour is not asked for. „If a man dies without leaving behind relatives or full-grown sons, nobody cares for the children, unless one wants a maid-servant." A widow must try to get lodging, in which she does not always succeed ¹⁾. It is clear that to these Greenlanders slaves would not be of any use. Nansen, too, makes no mention of slavery ²⁾.

Boas, describing the *Central Eskimos*, states that among them too children are adopted and considered by the adoptive parents as their own children; so „an elder adopted son has a preference over a younger son born of the marriage", viz. as to the right of inheritance. The following statement still more directly bears on our subject: „Sometimes men are adopted who may almost be considered servants. Particularly bachelors without any relations, cripples who are not able to provide for themselves, or men who have lost their sledges and dogs are found in this position. They fulfil minor occupations, mend the hunting-implements, fit out the sledges, feed the dogs, etc.; sometimes however, they join the hunters. They follow the master of the house when he removes from one place to another, make journeys in order to do his commissions, and so on. The position, however, is a voluntary one, and therefore these men are not less esteemed than the self-dependent providers" ³⁾. The last sentence clearly shows that these servants are not slaves. And as in no other place does Boas make any mention of slaves, it is certain that slavery does not exist.

Ribbach gives some notes on the *Eskimos of Labrador*. There is nothing on slavery in these notes. Describing their dwellings he says: „The principal family has of course the best place; the servants, widows or orphans, if there are such, have to content themselves with a place near the door, where

1) *Ibid*, pp 211, 215

2) Nansen *passim*

3) Boas, *Central Eskimo*, pp. 580, 581

the cold is most severe" ¹⁾. This agrees so much with the foregoing descriptions, that we may suppose that the same state of things prevails here.

As little mention is made of slavery in the descriptions of some other Central Eskimo tribes, as the *Frobisher Bay and Field Bay Eskimos* ²⁾, the *Kimipetu Eskimos* ³⁾ the *Tchiglit Eskimos* ⁴⁾, the *Eskimos of the Ungava district* ⁵⁾.

Bancroft says of the *Western Eskimos* (or Eskimos of Alaska): „Slavery in any form is unknown among them" Elliott makes no mention of slavery ⁶⁾.

The describers of the *Eskimos of Point Barrow*, too, have not a word about slavery. Adoption is practised to a great extent ⁷⁾. So the same state of things probably prevails here as among the other Eskimos.

Some other tribes, belonging to the Eskimo group in the wider sense ⁸⁾, may also be treated here.

Amongst the *Aleuts*, according to Bancroft, the chief „is exempt from work, is allowed a servant to row his boat, but in other respects possesses no power" ⁹⁾. No more is added bearing on our subject. Petroff, however, gives a detailed account of slavery among them. The slaves were prisoners of war and their descendants. The master could punish the slave with death, could sell and liberate him. Any attempt to escape was severely punished ¹⁰⁾. Featherman, who has not consulted Petroff, also states that the captives and their children were the property of the principal men of the tribe; the master could do with his slave what he liked ¹¹⁾.

10) Petroff, p 152

11) Featherman III (North America), p 469.

So the Aleuts had slaves.

The *Athka Aleuts*, according to Petroff, have also slaves ¹⁾.

Among the *Koniagas* or Southern Eskimos „slavery” says Bancroft „existed to a limited extent” This is affirmed by Featherman ²⁾.

2. Nootka group.

The *Tlinkits* formerly carried on slavery to a great extent. This is proved by the detailed accounts of several writers ³⁾

The same applies to the *Haidus* ⁴⁾.

Krause, in a short note, speaks of a female slave of a *Tsimshian* chief Niblack states that the *Tsimshians* acted as middlemen in the slave trade Boas describes the legends of the *Tsimshians*; in these legends slaves and their occupations are frequently spoken of ⁵⁾ Hence we may infer that slavery formerly existed among them.

Krause says of the *Bilballas*: „The chief possessed numerous wives and many slaves, also these Indians were much given to slave-stealing and the slave trade” ⁶⁾ As the *Bilballas* are reckoned by Bancroft among the *Haidas*, amongst whom, according to him, „slavery is universal”, we may suppose, that slaves are kept by them for their own use, not for export only.

Among the *Nootkas* „slavery is practised by all the tribes”, says Bancroft ⁷⁾.

The *Ahts* of Vancouver Island are a division of the *Nootkas*. Sproat gives many details of their slave system ⁸⁾

Bancroft informs us that „slaves are held by all the tribes” about *Puget Sound*, and gives several details of their slave system ⁹⁾.

6) Krause, p 321

7) Bancroft, p 195

8) Sproat, pp 89-92

9) Bancroft, p 217.

Slavery also exists among the *Fish Indian* of British Columbia ¹⁾.

3. Tinnéh group.

Niblack states that slavery existed among the *interior Tinnéh*, but they „had no hereditary slaves, getting their supply from the coast” ²⁾.

Of the *Kutchins* or *Loucheux* Jones says: „Slavery is practised among them. Any poor creature who has no friends is made a slave” ³⁾. Hardisty gives more details; he tells us: „As a rule slavery does not exist, but the orphan and the friendless are kept in servitude and treated so harshly as to be really little better than slaves, until such time as they get big enough and bold enough to assert their independence, when they are allowed to shift for themselves” ⁴⁾. Such ill treated children, who when full-grown are „allowed to shift for themselves” certainly are not slaves. Therefore we may safely infer, that slavery does not exist here, the more so, as our other authors ⁵⁾ make no mention of slaves.

Mackenzie, describing the *Chepewyans* or *Athabascas*, states that they are constantly at war with the Eskimos, and kill as many of them as they can, as it is a principle with them never to make prisoners” ⁶⁾. Neither in his notes on the Chepewyans in general, nor in those on some single tribes belonging to the Chepewyan family, as the *Slave and Dog-Rib Indians*, *Hare Indians*, *Beaver and Rocky Mountain Indians*, does our author make any mention of slavery. Nor is there a word to be found about slaves in Bancroft's account. Hearne speaks of *Northern* and *Southern Indians*, divisions of the Chepewyans. Among the Southern Indians a wife sometimes begs of her husband, who is going to war, to bring a female

5) Whymper, Kirby, Bancroft.

6) Mackenzie, I.p. 152

slave with him for her to murder. The chief Matonabee was the son of Northern Indian man and a Southern Indian slave¹⁾. Hearne does not speak of male slaves. So we may suppose that slavery proper does not exist.

On the *Taculles* Bancroft remarks: „Slavery is common with them, all who can afford it keeping slaves. They use them as beasts of burden, and treat them most inhumanely”²⁾. This is affirmed by Featherman³⁾.

Of the *Atnas* on Copper River, a division of the *Kenai*, Bancroft says: „Those who can afford it, keep slaves, buying them from the Koltshanes”⁴⁾.

Mrs. Allison informs us that among the *Similkameen Indians* of British Columbia „slaves taken in war were well treated, but always had one eye blemished to mark them”⁵⁾

4. Algonquin group.

Featherman remarks on the *Algonquins in general*: „The lowest class were those who did not belong to the tribal community by right of birth, and were either strangers themselves or descendants of aliens. Their condition in some respects resembled that of slaves. They could claim no property in the land, could not join the chief's party when travelling through the country except by express permission, and they were more or less subject to the orders of the *sannops*”⁶⁾. Nowhere is it stated that these persons were the property of individual masters; so it is very improbable that they were slaves, the more so as prisoners of war were either killed or adopted, but never enslaved⁷⁾. The other authors we have consulted⁸⁾ make no mention whatever of slaves.

Loskiel, describing the *Lenape* or *Delawares*, states that

5) Allison, p 316

6) Featherman III (N America), p 76

7) Ibid., p 79.

8) Roosevelt, Le Jeune in The Jesuit Relations Sagard, Mackenzie

captured boys and girls were received into their families, and employed as servants; sometimes, however, they were sold to Europeans. If such prisoners behaved well, they had nothing to complain of and were not overworked. If they ran away and were recaptured, they were generally killed. But the adult male prisoners, viz. those of them who were not killed, were adopted by families, instead of those who had been killed in war or had died in some other way; and from this moment were looked upon as members of the tribe to which they now belonged ¹⁾. As these men became members of the tribe, it is not probable that the captive children were made slaves; we may safely suppose that as long as they were young they had to perform menial work, but when adult were on a level with the members of the tribe. And as neither Loskiel, in any other passage, nor Brinton refers to slavery, slaves are very probably not to be found among the Delawares ²⁾.

In Le Jeune's account of the *Montagnais* no mention is made of slaves. Prisoners of war were cruelly put to death ³⁾.

The *Ojibways* or *Chippeways*, according to Keating, killed the captive warriors and old women; the marriageable women became slaves and were very cruelly treated by the women of the victorious tribe, the children were adopted and treated fairly well ⁴⁾. Jones's account is somewhat different. Most often all enemies were killed. Sometimes they made a few prisoners, who were adopted by those who had lost a relative; then the adopted prisoner became a relative or slave; if not adopted he was burned alive. The relatives of a murderer sometimes paid large indemnities to those of the victim, the murderer had then to work for them in order to pay off the debt; he was reduced to a kind of servitude ⁵⁾. In these accounts slaves and servitude are mentioned. The servitude of the murderer very probably is not slavery. He had to work; but it is not

1) Loskiel, p 195

2) Loskiel, Brinton; see also Featherman, l c. pp. 109 sqq

3) Jesuit Relations, V, pp 31, 55; VI, p 245

4) Keating, II p 168

5) Jones, Ojibway Indians, pp 131, 109.

stated that he was made a slave, i. e. the property of an individual person. The prisoners who became „relatives or slaves” were adopted; therefore they were not slaves in the proper sense of the word. And as for the female slaves Keating speaks of, we know that a slave system without male slaves is not slavery proper. We may suppose, that these female captives became an inferior kind of wives, to whom the women of the tribe were unkind through a very natural jealousy. The inference is that slavery did not exist¹⁾.

This inference is strengthened by what Tanner tells us of the *Ottawas*, an Ojibway tribe. He was adopted by an Ottawa woman, but was not at first on a level with the other children. The first few years she made him do various kinds of manual labour: he had to cut wood, fetch water and do other kinds of work, which were not generally required from children of his age. Yet when grown-up he was on a level with the Indians into whose tribe he was admitted, and married an Indian girl²⁾.

Before passing to the *Ottawas*, Tanner had been a captive amongst the *Shahnees*. He was very cruelly and ignominiously treated. Yet he was not a slave, for he had been adopted by a married couple on the grave of their youngest son, whose place he was to fill³⁾. As this agrees with the general customs of this group, in which there are no slaves, we may suppose that here also slavery was unknown.

The *Potawatomi* also very probably had no slaves; for none of their describers make any mention of slavery⁴⁾.

Amongst the *Crees* or *Knisteneaux*, according to McLean, adoption of aliens is practised. A missionary, who had unintentionally killed a Cree boy, offered himself in his stead, and was adopted. Mackenzie makes no mention of slavery⁵⁾.

2) Tanner pp. 17, 112, 114.

3) Tanner, pp. 11, 16.

4) Keating; Long, Ojibway Indians; Roosevelt.

5) McLean, p. 64, Mackenzie.

The *Cheyennes* very seldom captured adult males; when they did, they generally put them to death. Children were adopted and treated like their own children; women became the wives of their captors ¹⁾).

The *Blackfeet nation* consists of four tribes: *Piegans*, *Blackfeet*, *Bloods*, and *Gros Ventres*. We are told that once when at war against the Crows, the Gros Ventres „rushed upon them and killed the whole number” ²⁾. Grinnell, speaking of a Piegan chief, says: „He told his men not to kill the captured women. They also captured . many children. The chief selected a wife for himself from among these women.” As a rule they spare none of their enemies, killing alike men, women and children. Sometimes they spare a captive for his bravery or from dread of sorcery; he is then provided with victuals and dismissed to his home ³⁾. These particulars being given, and no mention made of slavery by any of our authors ⁴⁾, we may safely infer that slavery does not exist among these tribes.

Hoffmann, in his description of the *Menomini Indians*, referring to Grignon, says that he does not know whether they had captive slaves; but certainly they had purchased slaves. Our author saw 6 male and 8 female slaves, most of whom had been enslaved when young. The female slaves had been sold for 100 dollars each. The slaves were called Pawnees, though some of them belonged to other tribes ⁵⁾. This statement sufficiently proves, that in the time of this description the Menomini had slaves. But in Hoffmann's time they were already very much under the influence of European civilization. Whether at the more remote period from which most of our information on the Algonquin tribes dates slavery existed among them, we do not know.

5. Iroquois group.

The *Iroquois* had no slaves. This is stated by Morgan, who was intimately acquainted with them. „Slavery”, says Morgan „which in the Upper Status of barbarism became the fate of the captive, was unknown among tribes in the Lower Status in the aboriginal period.” And the Iroquois are his typical instance of this „Lower Status”: „When discovered the Iroquois were in the Lower Status of barbarism.” Captives were either put to death or adopted ¹⁾. Charlevoix states, that „most of their captives are condemned to death, or to a state of abject slavery in which they were never certain of their lives” ²⁾. But he gives no more particulars about this slave state, nor do our other authors ³⁾. On the contrary, Lafitau informs us, that the condition of prisoners, whose life is rather hard amongst the Algonquin tribes, amongst the Iroquois and Hurons is very easy ⁴⁾. The descriptions given by our authors of the fate of captives justify Morgan’s statement: they were either killed or adopted ⁵⁾, and though Lafitau calls the prisoners „*esclaves*”, he evidently does not mean to say, that they are kept in a slave-like state. So we may safely infer, that slavery did not exist among them, and that Charlevoix’s above quoted statement is false.

The *Tuscaroras*, who later on joined the league of the Iroquois, according to Featherman (who refers to Lawson and Wyth) had slaves. „Slavery was a legal institution, but the slaves, who were principally recruited from prisoners of war, were well treated and were never overburdened with work”. „When the captive was allowed to live, and was treated as a slave, they stripped off the skin from the root of the toe to the middle of the foot, and the wound thus made

1) Morgan, *Anc Soc*, pp 80, 69

2) Charlevoix *Nouv France*, III p 245

3) Lafitau and Loskiel Loskiel’s account of the Delawares applies equally to the Iroquois, see Loskiel, p 1

4) Lafitau, II p 308

5) Lafitau, III pp. 264—290, Charlevoix, I c pp 242—252; Loskiel, p. 195

was wrapped in the skin until it was healed. By this means they rendered the escape of their slaves most difficult, for wherever they went, their peculiar footmark could easily be traced" ¹⁾). Morgan's statement about the Iroquois in general tends to weaken this assertion of Featherman's very much. Yet Featherman's account may be true, without these captives being slaves. It is not stated that they belonged to individuals, nor that they did menial work. On the contrary, we are informed that „those who, from want of capacity or deficiency of force of character, were cowardly and lazy and had no personal qualities that would entitle them to lay claim to respect and consideration as expert hunters and brave warriors, occupied an inferior social position in the community. They were compelled to perform all the hard labour and attend to the common drudgeries. They were the cooks, they worked the fields, and collected the bark for the houses" ²⁾). From this it appears that social rank did not depend on birth, but on personal qualities. Therefore we may safely infer, that these so-called slaves were in reality adopted prisoners.

Among the *Hurons* or *Wyandots*, according to Powell, the captives were either killed or adopted ³⁾ Lafitau's and Charlevoix's accounts of the fate of captives among the Iroquois apply also to the Hurons. So it is probable that they had no slaves.

6. Choctaw - Muskoghe group.

Adair, speaking of the *Katahba*, *Cherokee*, *Muskoghe*, *Choctaw* and *Chickasaw* Indians, states that they burned their prisoners. Only if a prisoner succeeded in escaping to the house of the high-priest or some other place of refuge, he was not burned; but what his fate was in such a case we are not told. Young prisoners were not killed; but it is not stated what became of them. If warriors had offended a neighbouring tribe, and the chiefs wished to prevent war, they

1) Featherman III (N America) pp. 130, 132

2) Ibid., pp. 130, 131

3) Powell, *Wyandot Gov.*, p 68

sacrificed either one of the offenders belonging to a weak family or some unfortunate prisoner, who had been incorporated into a declining tribe¹⁾. The last sentence seems to show, that the custom of adopting prisoners prevailed here too. At any rate, no mention is made of slaves.

Rocheftort remarks that among the *Apalaches* (who, according to Roosevelt, included the *Cherokees*, *Chickasaws*, *Choctaws*, *Creeks* and *Seminoles*²⁾) an enemy who surrendered during the fight, was taken to the conqueror's home with his wife and children, held in an honourable freedom and treated with as much leniency and care as their own servants³⁾. Whether such persons were slaves does not clearly appear from this statement. But Adair's record tends to prove that slavery did not exist, at least as far as the three former divisions of the *Apalaches* are concerned

Loskiel relates that a prisoner was once condemned to death by the *Cherokees*. He had already been tied to the stake, when a Cherokee woman arrived. She brought a basketful of commodities, which she deposed at the feet of him to whom the prisoner belonged, and bade him leave this prisoner to her, a childless widow, who wanted to adopt him as a son. This was done⁴⁾.

Bartram tells us that the *Creeks* formerly tortured their captives to death⁵⁾.

The *Seminoles*, too, used to burn their prisoners. According to Featherman „young boys and girls were adopted by the various families to take the place of those who had been killed in the hostile encounter”⁶⁾.

Natchez warriors delivered their captives to the families of those who had fallen in battle. The captives were always burned⁷⁾.

1) Adair, pp 303, 304, 287

2) Roosevelt, I p 50

3) Rocheftort, p 412.

4) Loskiel, p 197

6) Roosevelt, I pp 63, 64, Featherman, III (N America), p 178.

7) Charlevoix, *Nouv France*, III pp. 426, see also *Lettres édif*, XX pp 132, 133.

Strachey describes the *inhabitants of Virginia* (several tribes). He makes no mention of slaves. It is stated in his account, that children and foreigners were sacrificed¹⁾; if there had been slaves, these probably would in the first place have been the victims. One of the objects of their wars was to capture women and children. Before the commencement of the battle it was announced that the conquered „upon their submission or coming in, though two daies after, should live, but their wives and childrene should be prize for the conquerors”²⁾. Probably they made the women their wives or concubines, and adopted the children, as is done by so many Indian tribes; but we are not quite sure about it.

7. Dacotah group.

Owen Dorsey, describing the *Dacotahs or Sioux*, says: „There are no slaves among the Siouan tribes”³⁾. This assertion is strengthened by our other authors⁴⁾ making no mention of slaves. Mrs. E. G. Eastman tells us, that captive women and children were well treated and restored on the conclusion of peace; but often they preferred to remain with their new husbands and adopted parents⁵⁾.

Mathews informs us, that the *Hidatsas* generally adopt the children captured in war, and treat them like their own. When grown-up they sometimes return to their own tribe, but most often remain where they are⁶⁾.

Owen Dorsey informs us that among the *Omahas* „Slavery was not known” „Captives were not slain by the Omahas and Ponkas. When peace was declared, the captives were sent home, if they wished to go. If not they could remain where they were, and were treated as if they were members

5) Eastman, Indian Wars, p 412

6) Mathews, p 47

of the tribe; but they were not adopted by any one" ¹⁾. This positive statement is not weakened by James's assertion about captive women becoming slaves ²⁾.

Hunter states that among the *Osage* and *Kansas Indians* prisoners are adopted into the conquering tribe, as husbands, wives and children ³⁾. Featherman also tells us, that among the *Osages* „prisoners are never reduced to slavery, and whenever they are adopted they are kindly treated and regarded as members of the family" ⁴⁾.

Of the *Assiniboms* we are told: „Chiefs never receive a gift, considering it a degradation to accept anything but what their own prowess or superior qualities of manhood acquire for them. Their hearts are so good and strong that they scorn to take anything, and self-denial and the power to resist temptation to luxury or easily acquired property is a boast with them" ⁵⁾. Where even the chiefs rely only on their own prowess, the existence of slavery is improbable.

8. Oregon group

Gibbs describes the *tribes of Western Washington and North-Western Oregon* in general. Though the principal of these tribes are the *Chinooks* and the tribes about *Puget Sound*, there are probably some other tribes included in his general description; therefore we shall regard them as a separate case. „Slavery," says Gibbs, „is thoroughly interwoven with the social polity of the Indians of the coast section of Oregon and Washington Territory. East of the Cascades, though it exists, it is not so common . . . Southward it ceases, so far as my observation has gone, with the *Siskiyou Mountains*, which divide Oregon from California" ⁶⁾

„By the *Flatheads*," says Bancroft, captives are generally

6) Gibbs, p 188

killed by their sufferings." McLean, speaking of their wars, remarks: „When one 'party lost more than the other, compensation was made in slaves or some other kind of property" ¹⁾). This statement does not, however, prove that slavery existed among them; these „slaves" might be members of the tribe, delivered up either to be killed or adopted. Featherman reports: „Slavery exists among the Salish ²⁾ to a very limited extent; for as slaves are neither bought nor sold, and their children being adopted as members of the tribe, their number is very small" ³⁾). But as no more particulars are added, and we do not know from what author Featherman got his information, we are left in doubt as to the existence of slavery.

The *Chinooks* have slaves. „Slavery, common to all the coast families, is also practised by the Chinooks; . . . the slaves are obliged to perform all the drudgery for their masters, and their children must remain in their parents' condition, their round heads serving as a distinguishing mark from freemen" ⁴⁾).

„The *Shushwaps*," Bancroft remarks, „are said to have no slaves" ⁵⁾). Among the *Okanagans*, a division of the Shushwaps, according to Ross, „there are but few slaves . . . and these few are adopted as children, and treated in all respects as members of the family" ⁶⁾). Where all slaves are adopted as children, slavery proper does not exist.

Another division of the Shushwaps are the *Atnahs* on Fraser River (not to be confused with the Atnas on Copper River). Mackenzie describes a division of Indians, whom he does not mention under a separate name; but they seem to be akin to the Atnahs. „The Atnah and Chin tribe," says Mackenzie, „as far as I can judge from the very little I saw of that people, bear the nearest resemblance to them." On these

1) Bancroft, p. 269; McLean, p. 54

2) Selish or Salish, identical with Flatheads

3) Featherman, l. c. p. 366

4) Bancroft, p. 240.

5) Ibid., p. 276

6) Ross, as quoted by Bancroft, l. c.

Indians he remarks: „The strangers who live among these people are kept by them in a state of awe and subjection” ¹⁾. These strangers perhaps are slaves; but the lack of further details prevents our arriving at any positive conclusion.

Bancroft, after describing the manner in which some tribes put their prisoners to death, adds: „Among the *Sahaptins* some survive and are made slaves.... The Nez Percé system is a little less cruel in order to save the life for future slavery” ²⁾. So the *Sahaptins* or Nez Percés seem to have slaves, though we should wish for some more particulars that would exclude all doubt.

Powers states, that female slaves are more numerous among the *Shastika* than among the Californians ³⁾. This short note is the only evidence we have been able to collect on the subject.

9. Californians

Of the *Northern Californians* Bancroft tells us: „Although I find no description of an actual system of slavery existing among them, yet there is no doubt that they have slaves.” „Illegitimate children are the life-slaves of some male relative of the mother, and upon them the drudgery falls; they are only allowed to marry one in their own station, and their sole hope of emancipation lies in a slow accumulation of *allicochoick* (shell-money), with which they can buy their freedom” ⁴⁾.

Powers gives some more particulars about two North Californian tribes. Among the *Karoks* it is thought ignominious for a man to have connection with a female slave. When the purchase-money for the wife has not been paid, the children are looked upon as bastards; they live as outcasts and marry none but persons of their own condition. Among the *Hupas* a similar system prevails. A bastard is much despised; when

1) Mackenzie, II pp 217, 263

2) Bancroft, p 269

3) Powers, p 248

4) Bancroft, pp 349, 351.

old enough he is taken from his mother and becomes the property of one of her male relatives; he is not a slave, and yet has no share in the privileges of the family. The produce of his labour belongs to his master; he may marry only a person of his own condition, and is treated with ignominy. What he wins by gaming is his own; when this amounts to 15 or 20 dollars, he is free. His children are of the same rank ¹⁾.

Although these bastards present a close resemblance to slaves, Powers explicitly says that they are not slaves. Probably they are only a despised class; for social status, among these tribes, depends largely upon wealth. The chief „obtains his position from his wealth, and usually manages to transmit his effects, and with them his honours, to his posterity” ²⁾. „The ruling passion of the savage seems to be love of wealth; having it he is respected, without it he is despised” ³⁾. We may therefore suppose, that these bastards are despised because penniless, and as soon as they possess 15 or 20 dollars, respected for their wealth. And as we „find no description of an actual system of slavery existing among them,” slavery probably does not exist ⁴⁾.

Gatschet, describing the *Klamath* Indians, makes mention of slaves. Once they attacked the Pit River Indians, „killed the men, abducted the women and children to their homes, or sold them into slavery at the international bartering place at The Dalles.” According to Judge E. Steele „they had been selling to whites and others Indian children of their own and other tribes, and also squaws, the latter mainly for the purpose of prostitution” ⁵⁾. Whether all slaves were sold abroad,

1) Powers, pp 22, 75, 76

2) Hubbard as quoted by Bancroft, p 348

3) Bancroft, p 360

4) This conclusion of ours is strengthened by the following statement of Gibbs', which we have already referred to »Southward it [slavery] ceases, so far as my observation has gone, with the Siskiyou Mountains, which divide Oregon from California.” (Gibbs p 188).

5) Gatschet, pp. 59, 62, see also pp. 60, 16.

or any slaves were kept by them, does not appear. According to Bancroft „Mr. Drew asserts that the Klamath children of slave parents, who, it may be, prevent the profitable prostitution or sale of the mother, are killed without compunction” ¹⁾. Altogether the notes given by our authors are insufficient for us to decide, whether slavery really exists here

On the *Central Californians* Bancroft remarks: „Slavery in any form is rare, and hereditary bondage unknown.” „They do not appear to have kept or sold prisoners as slaves, but to have either exchanged or killed them” ²⁾ Here „rare” is perhaps a synonym for „absent”; at any rate the existence of slavery here is doubtful

Of the *Southern Californians* „Boscana says that no male prisoners are taken and no quarter given, and Hugo Reid affirms of the natives of Los Angeles County that all prisoners, after being tormented in the most cruel manner, are invariably put to death. . . . Female prisoners are either sold or retained as slaves” ³⁾.

So they seem not to have any male slaves, therefore slavery proper probably does not exist

The *Nishinam*, according to Powers, kill their male prisoners. Women, after being flogged, are married, but sometimes they are also killed ⁴⁾. So it seems that they have no slaves.

10 New Mexicans.

On the *Shoshones* and *Utahs* we are not very well informed. „An act which passed the legislature of Utah in 1852 . . . set forth that from time immemorial slavery has been a customary traffic among the Indians.” But we are not told who bought and who sold the slaves. It is only stated that the Utahs sold their wives and children into slavery to the Navajos ⁵⁾. It is not probable that the Shoshones and Utahs

2) Ibid., pp. 388, 381.

3) Ibid., p. 407.

4) Powers, p. 322

5) Bancroft, p. 436.

themselves have slaves; for prisoners of war are killed, or in some cases dismissed unhurt ¹⁾.

Bancroft, describing the *Apache family* (including Apaches, Comanches, Navajos, Mojaves, etc), says: „All the natives of this family hold captives as slaves” ²⁾. But his account of the *Comanches* does not quite agree with this general statement: „Prisoners belong to the captors and the males are usually killed, but women are reserved and become the wives or servants of their owners, while children of both sexes are adopted into the tribe” ³⁾. According to Schoolcraft „prisoners of war belong to the captors and may be sold or released at their will”. Captive children are adopted and afterwards are on a level with the members of the tribe ⁴⁾. Gregg speaks of prisoners being enslaved and ill-treated by the conquerors. But whether he means to say that they remained slaves is not clear ⁵⁾. Cessac also speaks of slaves. „If, among the captives of the dead, one was particularly loved by his master, he is sacrificed and buried with him” „If a favourite slave is sacrificed, it is to give the master a fellow-traveller.” No more particulars about these slaves are given. In their wars against the Mexicans they spare none but the children, whom they treat as their own. „These captives forget their origin and later on, when full-grown, become an integral part of the tribe” ⁶⁾. It is not clear whether the slaves Cessac speaks of are identical with these adopted children; he would not have used then the term „slave” in its proper sense. Ten Kate, a careful observer, states that a number of Mexican captives, altogether about fifty, live among the Comanches and Kioways; they have almost entirely adopted the manners and customs of the Indians and are considered by the latter

1) Ibid., p. 433

2) Ibid., p. 510.

3) Ibid., p. 500

4) Schoolcraft, I pp. 232, 235

5) Gregg, II p. 243

6) Cessac, pp. 115-116.

as members of their tribes¹⁾. Another author tells us of a Mexican boy and girl, taken prisoners by the Comanches. The boy was afterwards sold to the Cherokees, the girl was married against her will by a Comanche. Another captive Mexican woman was married to a Comanche chief²⁾ Comparing these several statements, we may safely infer, that the Comanches do not keep slaves, but adopt their prisoners

Ten Kate's above-quoted statement applies also to the *Kioways*. Möllhausen met with two young Mexican prisoners among them, a man and a woman. The young man declared, that he did not want to exchange his present abode for another. The woman, though married to a chief and mother of a young chief, expressed the wish to return to her own country, but the chief would not let her and her child go³⁾. We may suppose, that the same state of things prevails here as among the Comanches.

Of the *Apaches* proper Bancroft (besides his above-quoted general statement) says „They treat their prisoners cruelly, scalping them, or burning them at the stake, yet, ruled as they are by greediness, they are always ready to exchange them for horses, blankets, beads, or other property. When hotly pursued, they murder their male prisoners, preserving only the females and children, and the captured cattle“⁴⁾. This is not very suggestive of slavery, and Bancroft's general statement about the Apache family appears rather strange. Schoolcraft tells us. „These [the chiefs] can have any number of wives they choose, but one only is the favourite. She is admitted to his confidence, and superintends his household affairs; all the other wives are slaves to her; next come his *peons*, or slaves, and his wife's slaves, and the servants of his concubines; then the young men or warriors, most generally composed of the youth who have deserted other tribes

3) Möllhausen, p 137.

4) Bancroft, p. 498.

on account of crimes, and have fled to the protection of the chief of this tribe Then come the herdsmen, and so on" ¹⁾). „These „slaves”, ranking even above the warriors, very probably are not slaves in the true sense of the word. As no mention is made of true slaves, we may suppose that slavery does not exist among the Apaches.

In an above-quoted passage Bancroft states that the Utahs frequently sell their wives and children as slaves to the *Navajos*. According to Bent the *Navajos* „have in their possession many prisoners, men, women and children, whom they hold and treat as slaves” ²⁾ But these statements are not sufficient for us to go upon; these prisoners may be adopted, or intended to be sold, as well as kept as slaves.

Miss Olive Oatman, detained among the *Mohaves* or *Mojaves*, says: „They invented modes and seemed to create necessities of labor that they might gratify themselves by taxing us to the utmost, and even took unwarranted delight in whipping us on beyond our strength. And all their requests and exactions were couched in the most insulting and taunting language and manner, as it then seemed, and as they had the frankness soon to confess, to fume their hate against the race to whom we belonged. Often under the frown and lash were we compelled to labor for whole days upon an allowance amply sufficient to starve a common dandy civilized idler” ³⁾. Though such prisoners are held in a slave-like state, yet evidently the object of the masters in imposing disagreeable work upon them is not to get useful labourers, but to „fume their hate”. This account may warn us against attaching too much value to statements about slavery among similar tribes, especially where the „slaves” are whites. For such tribes, as the Apaches, who are always ready to exchange their prisoners for some property, will be very apt to take prisoners, especially whites, who are likely to offer a better ransom than Indians. In such

1) Schoolcraft, V p. 210

2) Bent as quoted by Bancroft, p. 510

3) Stratton as quoted by Bancroft, p. 511.

cases the prisoners are not killed; for by killing them the Indians would lose their ransom; but they may safely, as in Miss Oatman's case, be treated as slaves by way of vengeance. But where these are the only slaves existing, a regular slave-system does not prevail. As for the Mohaves, no more particulars being given, we do not know whether they have slaves.

In Bancroft's account of the *Pueblo tribes* no mention is made of slavery. On the *Pimas* he informs us: „If prisoners are taken, the males are crucified or otherwise cruelly put to death, and the women and children sold as soon as possible”¹⁾.

In Parker Winship's article it is quoted from Mendoza's letter, that the *Cibola Pueblo* „keep those whom they capture in war as slaves”²⁾. This being the only reference made to slavery, we are unable to decide whether it really existed.

Ten Kate in his detailed account of the *Zuñ* (a Pueblo tribe) makes no mention of slavery; so they probably have no slaves³⁾.

Bancroft, describing the *Lower Californians*, has nothing about slavery. Although their battles are described at some length, no mention is made of captives; probably they take no prisoners⁴⁾. We may therefore safely infer, that slavery does not exist among them.

We may add here a short account of *Negro-slavery among the Indians.*

According to the census of 1860 several Indian tribes had Negro-slaves. Our informant enumerates the *Choctaws, Chero-*

kees, *Creeks* and *Chickasaws*. Slavery was carried on to a great extent; some owners had from 50 to 200 slaves¹⁾. We may remember that all these originally had no slaves.

The *Creeks* already in Bartram's time (1789) had slaves. He tells us of a chief who kept 15 Negroes; they were slaves until they married Indian women, and then acquired the privileges of the tribe. Schoolcraft informs us that „if an Indian should murder a Negro, the law is satisfied with the value of the Negro being paid to the owner”²⁾.

The *Seminoles* also had Negro-slaves, according to Roosevelt and Gregg³⁾. But Maccauley is not quite certain about it. He observed a few Negroes living with them. It had been said that they were slaves; but our author is not of that opinion⁴⁾. Maccauley's account, however, dates from a later period than the other statements.

The *Shahnecs* in Gregg's time also kept a few Negro slaves⁵⁾.

Amongst the *French Créoles* the rich possessed slaves, Negroes imported from Africa and Indians overcome and taken in battle

But, as has already been said in the first paragraph of this chapter, these facts present no phenomena of unadulterated savage life. These Indian tribes had already undergone great changes by contact with the whites. Moreover, the Negroes kept by them as slaves were in a very peculiar condition, living in a foreign continent amongst foreign races. So we are justified in omitting these cases from our list of slave-keeping Indian tribes.

§ 3. *Central and South America.*

About the treatment of prisoners by the *wild tribes of North*

1) Boudin, pp 826, 827 Gregg (II p 195) also states that Negro slaves were to be found among these tribes

4) Maccauley, p 526

5) Gregg, II p 196.

Mexico Bancroft remarks: „Seldom is sex or age spared, and when prisoners are taken, they are handed over to the women for torture, who treat them most inhumanly, heaping upon them every insult devisable, besides searing their flesh with burning brands, and finally burning them at the stake, or sacrificing them in some equally cruel manner. Many cook and eat the flesh of their captives, reserving the bones as trophies”¹⁾. These particulars given, and no mention being made of slaves, slavery probably does not exist among them.

Among the *wild tribes of Central Mexico* „the heads of the slain were placed on poles and paraded through their villages in token of victory, the inhabitants meanwhile dancing round them. Young children were sometimes spared, and reared to fight in the ranks of their conquerors, and in order to brutalize their youthful minds and eradicate all feelings of affection toward their own kindred, the youthful captives were given to drink the brains and blood of their murdered parents”²⁾. Whether these children became slaves is not quite clear; we should think not, as they were „reared to fight in the ranks of their conquerors”; but this may also be the case with slaves³⁾. The lack of further particulars prevents our arriving at a positive conclusion.

Bancroft's notes on the *wild tribes of South Mexico* are very scanty. They sacrificed their prisoners. The *Mayas* had female slaves⁴⁾.

Bancroft informs us that „one principal object of war among the *ancient nations of Honduras* was to make slaves; but the *Mosquito Coast* was free from this scourge, according to all accounts.” „When prisoners were taken they were usually held as slaves, after having the nose cut off.... The coast people ... usually kill their prisoners”. Wickham, who gives a detailed account of the *Woolwa* or *Soumoo* of the *Mosquito*

1) Bancroft, p. 581

2) Ibid, p. 629.

3) So for instance among the *Tlinkits*; see Niblack, p. 252

4) Bancroft, pp. 656, 663.

Coast, makes no mention of slavery ¹⁾. So the inhabitants of Honduras had slaves, whereas those of the Mosquito Coast had not.

Slavery, according to Bancroft, was in force among the inhabitants of the *Isthmus of Panama and Costa Rica*, with the exception of the Caribs. „The prisoner is the slave of the captor; he is branded on the face and one of his front teeth knocked out. The Caribs however used to kill and eat their prisoners”. Gabb, who gives several particulars about the tribes of Costa Rica, makes no mention of slavery. According to Pokalowsky the Indians of *Cocle* in Costa Rica, when conquered by the Spaniards in the 16th century, had slaves. „They cut off the heads of their prisoners and preserve them as trophies; the boys and girls of the enemies are enslaved or sacrificed to their gods. If a master dies, his slaves are killed and buried with him; this custom prevails here to a greater extent than in any other part of India” ²⁾

Bancroft's statement about the *Caribs of the Isthmus* is confirmed by the fact that Pinart, who has largely drawn upon ancient spanish literature, makes no mention of slavery ³⁾.

Rocheftort speaks of slavery existing among the *Caribs of the Antilles*. They believed, that the bravest warriors of their nation after death would live in happy islands, and have their enemies, the Arawaks, for slaves; whereas the cowards would be the slaves of the Arawaks. In their wars with the Spaniards they did not kill the Negro slaves, but took them with them and made them work. Sometimes slaves were killed after their master's death, to serve him in the other world. Male prisoners were killed and eaten after a few days. Captive women became slaves; their children were reared with those of the Caribs. Female prisoners were sometimes taken for wives; then the children were free, but the mothers remained slaves. In the isle of Saint Vincent there were in

1) Bancroft, pp 729, 723; Wickham.

2) Bancroft, pp 771, 764, Gabb; Pokalowsky, p 50.

3) Pinart, see pp 33, 48

Rochefort's time English boys and girls, captured when very young; they had quite forgotten their parents, and would not even return with them, so accustomed were they to the life of the Caribs, who treated them very kindly, just as if they were of their own nation. De la Borde makes no mention of slaves ¹⁾ Though some details given by Rochefort seem rather suggestive of adoption of captive children, there are several facts indicative of real slavery. Where it is stated that when a captive woman was taken as a wife, the children were free, this statement implies that the other children of captive women, and children taken as prisoners, were slaves.

The *Continental Caribs*, according to Gumilla, killed all their prisoners, except the young women and children, whom they sold ²⁾. So slavery probably did not exist among them.

Ling Roth, in his article on *Hispaniola* or Hayti (inhabited by Arawaks), makes no mention of slavery; but this does not prove much, as his sources of information (early Spanish literature) were very incomplete. For instance, he has not been able to find anything bearing on the division of labour between the sexes ³⁾.

The several describers of the *Indians of Guana* ⁴⁾ make no mention of slavery. The tribes most fully described are the *Arawaks*, *Warraus*, *Macusi* and *Roucouyennes*. Martius however states that the Arawaks have slaves, who work in their houses and on the fields ⁵⁾. So we are not certain about the Arawaks; but we may safely suppose that among the three other peoples slavery does not exist.

The *Salwa* of Columbia, according to Gumilla, made war in order to acquire slaves to till their lands ⁶⁾.

1) Rochefort, pp 430, 478, 512, 480, 489, 477, de la Borde

5) Martius, p 693

6) Gumilla, II p 254.

In Siever Reclus and Simons' descriptions of the *Goajiro* no mention is made of slaves¹⁾. According to De Brettes, however „slavery exists; but the slave is a member of the family, though looked upon as an inferior being that may be killed if he refuses to obey”. A few more details are added about these slaves²⁾. Sievers, reviewing De Brettes' articles, remarks that this author is generally not very trustworthy, but that the ethnographical parts are the best of his work. Speaking of a photograph of Goajiro slaves given by De Brettes, he adds: „If there can be any question at all of slavery among them”³⁾. On the same page, however, he translates De Brettes's ethnographical account of the Goajiro, in which it is stated that slavery exists, without any commentary. Whether Sievers thinks it probable that slaves are to be found here, is not quite clear; so we cannot arrive at any accurate conclusion.

The ancient *Tupinambas* had no slaves. De Lery describes at considerable length the fate of their captives, who were killed and eaten; even the child of a captive and a woman of their own tribe was not allowed to live. Though an expert hunter or fisher, and a woman well able to work, were preserved somewhat longer than the rest, all were invariably killed after a few months. Nowhere in De Lery's book does it appear, that they made slaves by capture or by any other means⁴⁾.

Martius remarks about the *Indians of Brazil* in general: „Many of these tribes keep slaves.... Captivity in war is the only cause by which one loses his freedom, especially if a male; for the husband may sell his wife and children; but this is of rare occurrence”).

The *Apiacas* (a group of the Central Tupis), according to the same author, in their wars kill all adult prisoners, male

3) Sievers, Des Grafen Josef de Brettes Reisen, pp 381, 382

4) De Lery, pp 225—242, see especially pp 225, 236. Stade gives a similar account of the treatment of prisoners, quoted by Andree pp 85—88.

5) Martius, pp. 71, 74

and female, and eat them. Children they take with them and rear them with their own; they make them work in the plantations; but when about twelve or fourteen years old these children are killed and eaten ¹⁾. Though these children may be kept in a somewhat slave-like state, a tribe that kills its slaves when fullgrown is not properly to be called a slave-keeping tribe.

The same author informs us, that the *Mundrucus* and *Mauhés* have slaves ²⁾.

Of the *Miranhas* we are told that they enslave their prisoners; but usually these prisoners are intended to be sold to the whites. It does not appear whether any of them are kept for the *Miranhas*' own use ³⁾.

Keane, von Tschudi and Ehrenreich make no mention of slavery among the *Botocudos*. According to Zu Wied „the conqueror persecutes the vanquished, and but seldom makes captives, at least among the *Botocudos*; but on the Belmonte there are said to be seen some who were used as slaves for all kinds of labour” ⁴⁾. We do not know what this last second-hand information of Zu Wied's is worth; but we are justified in inferring that the *Botocudos* in general (except those on Rio Belmonte) have no slaves.

Azara states that in his time (he travelled in South America from 1781 to 1801) the *Guaycurú* had nearly died out, only one man being left ⁵⁾. But according to Boggiani *Guaycurú* is a general name for the tribes inhabiting the Gran Chaco ⁶⁾. so this statement of Azara's seems to apply to a small division of the *Guaycurú* only. Southey and Martius give some particulars about the slave-system of the *Guaycurú* ⁷⁾; but Colini, who has taken great pains to ascertain the identity of these

1) Ibid, pp 206, 207

2) Ibid., p 71

3) Ibid, p 73.

5) Azara, II p 146.

6) Boggiani, p 80.

7) Southey III, pp 391, 392, Martius pp 232, 233, 71.

tribes, quotes these descriptions as referring to the Mbayás. Of the ancient Guaycurû he says: „In their combats they gave no quarter to the adult males; but they spared the lives of the youths, whom they educated after their customs and gave in marriage to their daughters, so as to augment the number of their tribe Full-grown women were sold to the neighbouring nations, who made them slaves”¹⁾ The only captives whom they kept among them, the youths, were not slaves, so slavery probably did not exist among them.

Two tribes inhabiting the Gran Chaco and so belonging to the Guaycurû in Boggiani's sense, are described by Thouar. Of the *Chiriguano*s he says „The prisoners are the property of their captors and must serve the mistress of the hut” In his description of the *Tobas* he makes no mention of slavery²⁾ Thouar, however, does not seem to be very reliable³⁾

The *Mbayas*, according to Azara, in his time had two kinds of slaves, the one composed of the Guanás, the other of Indian and Spanish prisoners of war. But the former were no real slave-class The Guanás „used to repair in troops to the Mbayas, to obey and serve them and till their lands without any payment Hence the Mbayás always call them their slaves. This slavery is indeed very mild, as the Guaná voluntarily submits to it, and leaves off whenever he likes” These „slaves” who lead a tribal life and come and go when they like, certainly are not slaves. The others however were real slaves. They procured the fuel, cooked the food, took care of the horses and tilled the land. When Azara once offered a present to a Mbayá, the latter would not take it himself, but ordered his slaves to receive it for him Even the poorest Mbayá had three or four slaves During the mourning-time women and slaves might not speak nor eat any meat. One place in Azara's book seems to show that they had not slaves: „They said they had received a divine command to wage war against all

1) Colini in Boggiani, p 297

2) Thouar, pp 51, 60 sqq

3) See Steinmetz, *Sfale*, I p 174 note 1

nations, kill the adult males and adopt the women and children, in order to augment their number. But where the recorded tradition and the description of the actual state of things disagree, we hold that the latter is to be accepted ¹⁾). Colini refers to Azara and Martius, and then adds: „Serra however asserts that among the Mbayás slavery proper (*la schiavitù vera e propria*) did not exist; the slaves might rather be called servants.” They fought together with the freemen and took part in the public council, even when it decided upon war and peace. They married free persons, but were themselves looked upon as slaves. On the master’s death, the sons or next relations, according to the rules of inheritance, became masters of the slaves; but these rights were only nominal. The slaves gradually merged into the tribe. Yet it was always considered as degrading to be a descendant of a slave; those who had in their ancestry none but members of the tribe were very proud of it. Generally the best slave-girls were married to their masters; the boys of greatest promise were treated as sons, whereas the others were set to do the rougher work ²⁾). This account, however, does not prove that the captives were not slaves. Some of the boys only were treated as sons; what were the rest if not slaves? And even slaves may to a certain degree be treated as sons. The slaves gradually coalesced with the tribe (though not entirely); but we are told that this change took place „through personal merits and intermarriage.” This shows that all captives were not on a level with freemen; probably it was only the most deserving prisoners, and the offspring of slaves and freemen, who attended the public council and were on an equal footing with the main body of tribesmen. Slaves may be kindly treated and yet be slaves. Our opinion is, that we have here a *schiavitù vera e propria*; the more so, as the description given by Azara, a good authority, leads to the same conclusion.

The present *Caduvei*, according to Boggiani, are the same

1) Azara II, pp 96, 108—110, 119

2) Colini in Boggiani, p 316

people as the ancient Mbayás. Very probably he is right here. Yet we have seen how much confusion there is in the application of the terms Guaycurú and Mbayás; so we are a little sceptical. Moreover, there is a great lapse of time between the early descriptions of the Mbayás and Boggiani's travels, and during that time their state of culture has greatly changed; from nomadic hunters they have in the present century become settled agriculturists ¹⁾. So we are justified in treating them separately. The Caduveí keep slaves. The slaves are well treated, but looked upon as an inferior race. The ruder kinds of work, and the tilling of the soil, fall to their share. As a rule they are kindly treated, without being allowed to forget their duties. They exchange the slaves among them for horses, cattle and various commodities ²⁾.

Pohl states, that the *Canoeiros* had captured a young man and treated him well ³⁾. Nothing more being added we cannot make out whether slavery exists.

Von den Steinen, who has visited the *tribes on the Upper Schingú* (Carib, Arawak and Tupi tribes, much of the author's attention being bestowed on the Bakairi), makes no mention of slavery. If it existed, he certainly would have observed and mentioned it.

The same applies to the *Paressu* and *Bororo*.

Also in Hensel's description of the *Coroados*, who are often identified with the Bororo, there is not a word to be found about slaves ⁴⁾.

The *Karayas* on Rio Araguaya keep captive women in a somewhat slave-like state. Prisoners of war, adopted into the tribe, sometimes are made chiefs if they have distinguished themselves ⁵⁾. This is not very suggestive of slavery; but the details given are not sufficient for us to arrive at a clear conclusion.

2) Boggiani, p 100

3) Pohl, p 163

4) Von den Steinen, Hensel

5) Ehrenreich, Beiträge, pp 28, 29

On the *Záparos* we get this scanty information. They are always at war, killing many of the men, and stealing the women, children and chattels of the enemies, the children either for use as servants or for sale. A boy or girl stolen by them is commonly sold to traders ¹⁾. Apparently the author himself is in doubt, whether any of these captives are kept as slaves.

Some savage tribes of Peru are treated of by Ordinaire. In his account of the *Campas* or *Antis* there is nothing bearing on slavery. He states that he met with a Lorenzo child living among the *Campas*; but it is not clear whether this was a slave; and the rest of his ample record makes the existence of slavery rather improbable ²⁾.

About the *Combas* and kindred tribes he remarks, that among their wives there are some slaves captured from neighbouring tribes. But as he states, that all the fatiguing work is incumbent on women, it is probable (though not at all certain), that there are no male slaves and therefore no slavery proper. Prisoners of war are killed at their feasts ³⁾.

The *Guanas* probably have no slaves. We are told that the head of the tribe „is obliged to work for his subsistence, as nobody serves him” ⁴⁾

As little does it appear that the *Yuracarés* and *Mocéténès* are slave-keeping tribes. The former live in families, and even in those subordination is unknown. The latter are not war-like ⁵⁾. It is not, however, a first-rate authority to whom we owe these particulars.

The *Chiquitos*, according to the same author, in their wild state attacked their neighbours, and made slaves, to whom they gave their own daughters as wives ⁶⁾. Whether these prisoners were slaves is not clear; we should rather think not.

1) Simson, p. 505

2) Ordinaire, pp. 287, 270 -273

3) Ibid., pp. 308, 309

4) Azara, II p. 96

5) D'Orbigny, I pp. 360, 372

6) Ibid., II p. 166.

The *Chapacuras* were very peaceable, and but seldom attacked their neighbours ²⁾ Whether slavery existed among them we are not told.

The *Moxos*, in D'Orbigny's time, had already long been civilized and christianized. What their political institutions were in their former wild state we do not know ³⁾.

The principal native people of Paraguay were the *Abipones*, described at large by Dobrizhoffer. The prisoners they made were very leniently treated. They gave the prisoners the best of their food, and tended them when ill. The prisoners had daily opportunity to run away, but they did not desire it, for they were very contented. They were never beaten, nor even reproved. They hunted and fought together with the *Abipones*. And yet they were not merged into the nation of the *Abipones*; for the *Abipone* women generally would marry only a man of their own people; and the men never married female prisoners, nor had they any connection with them. It appears that every captive was assigned to an individual master. So we have here to deal with the fact, that one man is the property of another beyond the limits of the family proper, i. e. slavery, though slavery of an extraordinarily mild character ⁴⁾.

The *Payaguas* in their wars kill all adult men, and preserve the women and children. What becomes of the latter does not appear. The *Payaguas* are absolutely free and do not recognize any difference of classes. From this it is probable, though not certain, that they have no slaves ⁴⁾.

The *Enimagas*, according to Azara, are hunters; agriculture among them is incumbent on slaves. No further particulars are given about these slaves. The *Enimagas* are said formerly to have held the *Mbayas* in a kind of slavery; but such a subjection of a tribe as a whole is not slavery in the true

1) Ibid., II p. 214

2) L. o.

3) Dobrizhoffer, II pp 148—152

4) Azara, II pp 145, 132

sense; slavery is subjection of individuals. If the „slaves” the Enimagas had in Azara’s time were of the same description, they were not slaves ¹⁾. So we cannot arrive here at any definite conclusion.

D’Orbigny remarks, that the *Charruas* when at war killed all the men, and preserved the women and children, whom they made concubines and slaves ²⁾. As Azara’s statement is quite different, I shall translate it literally, „All are equal; nobody serves another; or it must be some old woman who, having no means of subsistence, joins some family, or assists at the burying of the dead”. In their wars they „kill all they meet, preserving none but the women and children under twelve years of age. They take their prisoners along with them, and let them enjoy their freedom; most of them marry there and get so much accustomed to this mode of life, that they but rarely wish to return to their own people ³⁾. Although such kind treatment is compatible with slavery, Azara’s statement about nobody serving another is positive enough to exclude all notion of slavery. Heusser and Claraz, who seem to be well informed, make no mention of slavery ⁴⁾. This fact together with the above-quoted positive statement of Azara, who on the whole seems to us more reliable than D’Orbigny ⁵⁾, and who also treats this matter much more fully, leads us to conclude that they have no slaves. The lapse of time between Azara’s and D’Orbigny’s travels (from about 30 to 50 years) might account for the difference of their descriptions; but it seems to us that so much importance need not be attached to the latter’s short remark.

The *Minuanes*, according to Azara, resemble the *Charruas*

1) Ibid, pp 159, 157

2) D’Orbigny, II p 89

3) Azara, II pp 15, 19, 20

4) Heusser and Claraz

5) Azara travelled in South America for 20 years, D’Orbigny for only 7
The former was commissary and commandant of the Spanish frontiers in Paraguay, the latter made a journey for scientific purposes, mainly zoological

in their mode of warfare, and in acknowledging no social classes ¹⁾. We may therefore suppose them to have had no slaves.

The *Patagons* or *Tehuelches*, according to Musters and Falkner, have slaves. The same is stated by Letourneau on the authority of Guimard ²⁾. And as these authors not only assert that there are slaves, but also give some particulars about them, we may be sure that slavery really exists.

About the *Puelches* we get some information from Azara, who calls them *Pampas*. „In war they kill all adult males, preserving none but the women and young boys; these they take home and treat in the same manner as the Charruas do. It is true, that they impose some labours upon them, and use them as slaves or servants until they marry; but then they are as free as the others” ³⁾. Such men, who as soon as they marry are on a level with the members of the tribe, certainly are not slaves.

The *Araucanians*, according to D'Orbigny, kill their male enemies and enslave the women and children ⁴⁾. Molina says:

„The prisoners of war, as is the custom of all semibarbarous nations, become *tavaichi*, i. e. slaves, until they are exchanged or ransomed” ⁵⁾. In his detailed description of Araucanian social life he makes no further mention of slaves, nor do the other authors ⁶⁾. So we may suppose that the prisoners are always exchanged or ransomed, and that slavery is unknown among them.

About the *Fuegians* we have this positive statement of Hyades and Déniker: „They have no chiefs, no labourers who work for pay, and no slaves” ⁷⁾. This statement, already valuable in itself, is corroborated by the fact, that none of

§ 4. *Australia.*

The Australian tribes, on which we have been able to collect some notes, are the following:

Dieyerie,
natives of Powell's Creek,
" " *Victoria River Downs Station,*
" " *Queensland and New South Wales,*
" " *Moreton Bay,*
" *on Herbert River,*
" *of North-west Central Queensland,*
" " *N. S. Wales,*
Cammarray,
Kurnai,
natives of West Victoria,
" " *Port Lincoln,*

natives of South Australia,
 " " *South-west Australia,*
 " " *King George Sound,*
 " " *the Moore River District,*
 " " *Central Australia,*
 " " *Port Darwin and the West Coast of the*
 Gulf of Carpentaria,
Tasmanians, ¹⁾
natives on Darling River, ²⁾
Wellington tribe, ³⁾
West Australians, ⁴⁾
Narrinyeri ⁵⁾.

Nowhere in all the books and articles we have consulted on these tribes is any mention made of slaves. Here our group-argument may be brought to bear. If we had but one or two of these descriptions, we might hesitate to assert that slavery does not exist; for they are not, all of them, very complete. But here we have to deal with an isolated district, inhabited by tribes physically and psychically much resembling each other, so much so, that some ethnographers ⁶⁾ and theorists ⁷⁾ speak of the Australians as if they were one people, as if all Australians were in exactly the same state of culture. This really is erroneous: there are many differences in several respects between the Australian tribes ⁸⁾. But that they can be

1) The literature on the foregoing tribes is the same as that quoted on p 20, Chapter I. Such large divisions as for instance „natives of Queensland and N S Wales" have been treated here as single tribes, because the accounts of our ethnographers show that, though using a general term, they only describe one or a few tribes they are acquainted with

2) Curr II, Bonney, Stokes; Mitchell

3) Hale

4) Grey.

5) Taplin as quoted by Woods

6) Curr; Brough Smyth. Gerland's survey of Australian social life is much better

7) E. g. Grosse and Letourneau

8) Comp. Steinmetz' treatment of the problem of Australian chieftainship, Strafe, II p. 20—42

treated in this manner, proves that the differences are not so very great, it is inconceivable, that Grosse would have spoken in the same way of the American Indians or the Negroes. What we mean to say now is this. our information on some Australian tribes is not sufficient to prove that just in that district which each particular account relates to, slavery does not exist. But then the several accounts strengthen each other; for taking into consideration the great likeness existing between the Australian tribes, it is *a priori* unlikely that some of these tribes would have and others would not have slaves. Moreover, if in any part of Australia slavery existed, our ethnographers probably would have found this too remarkable a fact to leave unnoticed.

As little mention is made of slaves by those ethnographers who speak of the Australians in general ¹⁾. According to Brough Smyth „each of the principal men and priests seeks for his food, and ministers to his own wants (with such help as he gets from his wives); and has no one whom he can call servant” ²⁾. Gerland states that the Australians make no captives, except women sometimes ³⁾.

All this makes it sufficiently clear that the Australians have no slaves ⁴⁾. The 23 tribes we have here enumerated may therefore rank as clear cases of savage tribes without slaves.

§ 5. *Melanesia*

The *New Caledonians*, according to Rochas, have no slaves proper, but only vassals. Prisoners of war become members of the family ⁵⁾. Brainne informs us, that there are two social classes chiefs of various kinds, and serfs; the latter term probably means the common people. De Vaux and Legrand

1) Curr; Brough Smyth Gerland

2) Brough Smyth, I p 127

3) Waitz Gerland, VI p 746

4) Letourneau (pp 26, 35) arrives at the same conclusion.

5) De Rochas, p. 252

make no mention whatever of slaves ¹⁾). According to Glaumont there are four classes, of which the fourth is composed of slaves (*en-dji-dio*) ²⁾). But no further particulars are given about these slaves in his rather long article; so it is probably by mistake that he speaks of slaves. We are therefore justified in concluding that slavery does not exist.

On the state of things in the *Solomon Islands* we are well informed by several authors. Elton says: „If a man is married and has got a little money and a few slaves, he calls himself a chief, but does not exercise any power over his slaves; they do pretty well as they like” ³⁾ The notes of our other ethnographers relate to single parts of this group. Verguet states that in *St. Christoval* the slaves „are treated as adopted children; the slave cultivates the master’s fields together with the master himself; he helps him to prepare the food and accompanies him when hunting or fighting; he shares in his pleasures as well as in his labour; when the tribe celebrates a feast, the slaves are not excluded from it. When full-grown, they marry into their master’s tribe, erect their houses next to their master’s house or share the latter. Sometimes the master does not disdain to marry his slave” ⁴⁾). Codrington, whose notes mainly relate to the same parts of the group, remarks: „There is no such thing as slavery properly so called. In head-hunting expeditions prisoners are made for the sake of their heads, to be used when occasion requires, and such persons live with their captors in a condition very different from that of freedom, but they are not taken or maintained for the purposes of service. In the same islands when a successful attack and massacre enriches the victors with many heads, they spare and carry off children, whom they bring up among their own people. Such a *seka* will certainly be killed for a head or for a sacrifice before any native member of the com-

2) Glaumont, p. 74

3) Elton, p. 98.

4) Verguet, p. 205.

munity; but he lives as an adopted member, shares the work, pleasure and dangers of those with whom he dwells, and often becomes a leading personage among them. A refugee or a castaway is not a slave but a guest; his life is naturally much less valued than that of a man of the place, and useful services are expected from him, while he mixes freely and on equal terms with the common people" ¹⁾). Guppy says: „I will turn for a moment to the subject of slavery in the eastern islands of the group. In *Ugu* it is the practice of infanticide which has given rise to a slave-commerce regularly conducted with the natives of the interior of St. Christoval. Three-fourths of the men of this island were originally bought as youths to supply the place of the natural offspring killed in infancy. But such natives when they attain manhood virtually acquire their independence, and their original purchaser has but little control over them. . . . Connected in the manner above shown with the subject of slavery is the practice of cannibalism.

The completion of a new tambu-house is frequently celebrated among the *St. Christoval* natives by a cannibal feast. Residents in that part of the group tell me that if the victim is not procured in a raid amongst the neighbouring tribes of the interior, some man is usually selected from those men in the village who were originally purchased by the chief. The doomed man is not enlightened as to the fate which awaits him, and may perhaps have been engaged in the erection of the very building at the completion of which his life is forfeited." On the neighbouring small island of *Santa Anna* the natives are reputed to abstain from human flesh; but „the war-chief has acquired a considerable fortune, in a native's point of view, by following the profitable calling of purveyor of human flesh to the man-eaters of the adjacent coasts of St. Christoval. . . . I am told that there is a faint gleam of tender feeling shown in the case of a man who, by long residence in the village, has almost come to be looked upon as one of themselves. He is allowed to remain in ignor-

1) Codrington, *The Melanesians*, p. 46

ance of the dreaded moment until the last: and, perhaps, he may be standing on the beach assisting in the launching of the very canoe in which he is destined to take his final journey, when suddenly he is laid hold of, and in a few moments more he is being ferried across to the man-eaters of the opposite coast" ¹⁾.

Somerville, describing *New Georgia* (in the centre of the group) remarks: „Slavery certainly exists, but it is in so mild a form that it is scarcely possible to detect master from man. I have never been able to elicit any facts concerning its introduction, propagation or limits, or even if (in so many words) it existed at all." „I was informed that slaves are kept chiefly for their heads, which are demanded whenever any occasion necessitates them, such as the death of the owner" ²⁾. The following statement of Woodford's also relates to New Georgia: „On their expeditions it is not heads alone that they bring back, but slaves as well. These are either bought or captured alive, and it is from among these slaves that the victims are selected in case a head is required. They appear to be well treated in other ways, and to have as much liberty as they please; in fact, seem to be on a perfect footing of equality and familiarity with their captors. But any day a head may be wanted to celebrate the completion of a new canoe or other work, and one of the luckless slaves is unexpectedly called upon to furnish it. Mercifully for the victim, the blow falls from behind and unexpectedly. These slaves are often employed as guides to lead a party of head-hunters unexpectedly upon the mountain villages on Ysabel, whence they originally came" ³⁾.

Speaking of the small isle of *Treasury* (near Bougainville Island, in the North-western part of the group) Guppy says: „There are in Treasury several men and women who, originally bought as slaves from the people of Bouka and Bou-

1) Guppy, pp 35, 36

2) Somerville, *New Georgia*, pp 402, 400

3) Woodford, pp. 154, 155

ainville, now enjoy apparently the same privileges and freedom of action as their fellow islanders. It is sometimes not a matter of much difficulty to single out the slaves amongst a crowd of natives. On one occasion I engaged a canoe of Faromen to take me to a distant part of their island: and very soon after we started I became aware from the cowed and sullen condition of one of the crew that he was a slave. On inquiry I learned that this man had been captured when a boy in the island of Bougainville, and I was informed that if he was to return to his native place — a bush-village named Kiata — he would undoubtedly be killed. Although in fact a slave, I concluded from the bearing of the other men towards him that his bondage was not a very hard one; and he evidently appeared to enjoy most of the rights of a native of the common class. Sukai, however, for such was his name, had to make himself generally useful in the course of the day; and when at the close of the excursion we were seated inside the house of a man who provided us with a meal of boiled taro, sweet potatoes, and bananas, he was served with his repast on the beach outside¹⁾.

The same author gives this general description of slavery in the Solomon Islands: „In the larger islands the bush-tribes and the coast-natives wage an unceasing warfare, in which the latter are usually the aggressors and the victors — the bushmen captured during these raids either affording materials for the cannibal feast or being detained in servitude by their captors. But there prevails in the group a recognized system of slave-traffic, in which a human being becomes a marketable commodity — the equivalent being represented in goods either of native or of foreign manufacture. This custom, which came under the notice of Surville's expedition, during their visit to Port Praslin in Isabel, in 1769, obtains under the same conditions at the present time. These natives were in the habit of making voyages of ten and twelve days' duration with the object of exchanging men for „fine cloths covered

1) Guppy, p 34

with designs", articles which were manufactured by a race of people much fairer than their own, who were in all probability the inhabitants of Ontong Java. The servitude to which the victims of this traffic are doomed is not usually an arduous one. But there is one grave contingency attached to his thralldom which must be always before the mind of the captive, however lightly his chains of service may lie upon him. When a head is required to satisfy the offended honour of a neighbouring chief, or when a life has to be sacrificed on the completion of a tambu house or at the launching of a new war-canoe, the victim chosen is usually the man who is not a free-born native of the village. He may have been bought as a child and have lived amongst them from his boyhood up, a slave only in name, and enjoying all the rights of his fellow natives. But no feelings of compassion can save him from his doom; and the only consideration which he receives at the hands of those with whom he may have lived on terms of equality for many years is to be found in the circumstance that he gets no warning of his fate" ¹⁾).

We have quoted the statements of these authors *in extenso* to show the reader, how difficult it is to decide whether the „slaves" our authors speak of, are really slaves. The difficulty does not here, as in so many cases, result from want of information. It is clear that these purchased and captured persons are kept in a state bordering on slavery; but it is not easy to say, whether this is not yet slavery, or an incipient stage of slavery. Apparently the same state of things does not prevail in the whole group. In Ugi, where three fourths of the men „were originally bought as youths to supply the place of the natural offspring", it is evident that slavery does not exist; and it is of the part of the group to which Ugi belongs, that Codrington says: „There is no such thing as slavery properly so called" Woodford states that slaves in New Georgia „have as much liberty as they please," and „seem to be on a perfect footing of equality and fami-

1) Guppy, p 33

liarity with their captors"; and Somerville could not get any information, whether slavery existed at all. Its existence here is therefore doubtful. As for the North-western division of the group, Guppy's account of the „cowed and sullen condition" of the „slave", who had to take his meal on the beach, is rather suggestive of slavery; but this inference is weakened by Guppy's stating that the chief of the same island „had adopted a little Bougainville bushboy, named Sapeku, who was purchased when very young from his friends" ¹⁾. So adoption of purchased bushmen is in use here. Our conclusion is, that the state of purchased and captured persons in the Solomon Islands is not slavery, though it differs very little from slavery.

Williams, enumerating the social classes that in his time existed among the *Fijians*, states that the lowest class was composed of slaves. No more particulars are given about these slaves. Prisoners of war were barbarously tortured -). A report quoted by Spencer, also speaks of a lowest class consisting of slaves. The last class sometimes, through numbers, overcame the upper classes. „This has been the case at Amban, where the people at no distant period rose against and drove out their kings" ²⁾. This author, who uses the terms „slaves" and „the people" as synonymous, probably speaks of a class of despised and oppressed proletarians, not of slaves. Erskine describes the relation between different districts. Sometimes one had to pay a tribute to the other. „The lowest condition of all, the consequence of some late total defeat or conquest, is absolute slavery, the districts where such a state exists being called *vanua kausis* or slave lands" ³⁾. Such subjection of a district as a whole is not, however, slavery in the true sense. The above quoted author, who speaks of the slaves overcoming the upper classes, gives as the native name of these slaves *kar-si*; so they are probably identical with the inhabitants of

1) Guppy, p. 33.

2) Williams, pp. 32, 53

3) Spencer, *Descr Soc.* III. p. 12

4) Erskine, quoted by Spencer, l. c.

Erskine's „slave lands". Waterhouse makes no mention of slaves ¹⁾. So we may suppose that slavery did not exist, and that Williams has mistaken for slaves a class of proletarians or inhabitants of „slave lands".

Codrington's above quoted statement, that „there is no such thing as slavery properly so called", applies also to a part of the *New Hebrides*. Meinicke, after speaking of the chiefs, adds: „The rest of the people are free men" ²⁾. Our other authors ³⁾ making no mention of slavery, we may safely infer that it does not exist here.

Danks gives an elaborate description of marriage customs in the *New Britain Group*, in which there is not a word to be found about slaves ⁴⁾. This makes the existence of slavery very improbable. Parkinson, whose notes chiefly relate to the *Gazelle Peninsula* of *New Britain*, in his account of the labour-trade, speaks of „despised, unprotected people, slaves of the chiefs captured in their intertribal wars, or bastards, orphans, friendless persons of their own tribe" Persons of this description were sold to Europeans who wanted labourers ⁵⁾. But whether they were kept as slaves by the natives themselves, or only enslaved in order to be sold, does not appear. In his notes on war and cannibalism he makes no mention of slaves. Once, when he caught a man who had stolen something from him, two chiefs offered to buy the thief; not, however, to keep him as a slave, but to eat him ⁶⁾. Powell, too, makes no mention of slavery; he relates many cases of revenge of the natives against the whites; these whites were always killed, men, women, and children; he never speaks of their being enslaved ⁷⁾.

1) Waterhouse.

2) Meinicke, *Die Inseln des stillen Oceans*, I p 202

3) Hagen and Pineau, *Inghis*, Somerville, *New Hebrides*

4) Danks.

5) Parkinson, *Im Bismarck-Archipel*, p 27

6) *Ibid*, p 80

7) Powell, *Wanderings*, see especially pp 262—266 Powell, however, does not appear to be very reliable, see Steinmetz, *Endokannibalismus*, p. 10 note 6.

As for *New Ireland*, belonging to the same group, Romilly was present at a battle of the natives; the slain were afterwards cooked and eaten; and his minute description, in which there is not a word to be found about captives, makes the existence of slavery, here too, very improbable ¹⁾. So we may suppose that the inhabitants of this group do not keep any slaves.

In the islands of *Torres Straits*, according to Meinicke, there is no government and no social division, except the division into tribes ²⁾. Haddon, describing the western tribes of Torres Straits, says: „I never heard of slavery being practised” ³⁾. So slavery is probably unknown here.

The rest of this paragraph will be taken up with a survey of *New Guinea*.

The *Papuas of Humboldt Bay*, according to Bink, have no slaves ⁴⁾.

In the *district of Tabu* some men were observed, who had their hair cut short; according to a Dorey interpreter, they were slaves ⁵⁾. This short note is not, however, sufficient to go upon.

The inhabitants of *Servei* are much given to the kidnapping of slaves, whom they sell. Whether they keep any slaves themselves, does not appear ⁶⁾.

The natives of *Ansus* purchase many slaves, and sell slaves to Ternate traders ⁷⁾. In this case, too, we are not told, whether all the purchased slaves are sold abroad, or any of them are kept by the natives.

The aborigines of *Windessi* in their raids make prisoners „to whom they give the name of *woman, slave*” ⁸⁾. This

6) *Ibid*, p 262.

7) *Ibid.*, p 235

8) Van der Roest, p 157.

short note does not enable us to arrive at a clear conclusion.

Goudswaard says of the *Papuas of Geelvink Bay* generally: „The Papua steals men, makes them slaves, and despises them.” „The wars of the Papuas are little more than raids, in which they burn the houses of their enemies, destroy their gardens, and if possible make women and children prisoners, to restore them later on for an adequate ransom, or else to keep them as slaves or exchange them” ¹⁾).

The accounts, given by Van Hasselt and De Clercq, prove that slavery exists among the *Nuforesc* ²⁾).

The inhabitants of *Dorey* and *Roon* belong to the *Nuforesc*. Rosenberg gives some particulars about slavery in *Dorey*, and Robidé has a few short notes on slaves kept by the inhabitants of *Roon* ³⁾).

Slavery also exists among the natives of *Arfak* ⁴⁾

The *Hattamers*, however, who live in the *Arfak* mountains, have no slaves. „The *Hattamers*,” says Robidé, keep no slaves; in their wars with neighbouring tribes they do not enslave the prisoners, but cut off their heads, which they bring home as trophies”).

The *Karons*, according to Brujn, capture slaves from their neighbours, but whether they keep them for their own use is not quite clear. Another author tells us that they eat their prisoners ⁵⁾).

The existence of slavery among the *Papuas of the Gulf of Maccluer* is made probable by De Clercq's and Strauch's notes ⁷⁾. Another author observed slaves in some districts at the South-west side of this gulf; the population of these districts is a mongrel race of Buginese, emigrants from *Serang*, and *Papuas* ⁸⁾).

Slavery exists on the isle of *Adie* and along the *Gulf of Kaamani* ¹⁾.

The *Hill-tribes of Ayamdori* have no slaves ²⁾.

The *Papuas of British New Guinea* very probably are unacquainted with slavery. Thomson states, that several tribes in warfare kill alike men, women and children ³⁾. The describers of single tribes: *Motu*, *Mowat*, *Toaripi*, also make no mention of slaves ⁴⁾.

In *German New Guinea*, too, slavery probably does not exist. Vallentine explicitly states that the *Tumul* have no slaves; and Finsch says, that every Papua warrior considers it an honour to kill women and children ⁵⁾. Maclay, too, makes no mention of slaves ⁶⁾.

§ 6. *Polynesia.*

All authors agree that the *Maori* of New Zealand had slaves; and the many details they give prove that slavery really existed ¹⁾

The *Tongans*, according to Meinicke, had slaves, partly prisoners of war, partly condemned criminals ²⁾ Gerland, referring to a missionary report, speaks of slaves, *tamaweski*) But in his very minute description of Tongan government and social classes ³⁾ he gives no more particulars about these slaves, and Mariner who, according to Gerland, is very reliable ⁴⁾, makes no mention of slavery Mariner enumerates five social classes; the lowest class were the *tooas*, the bulk of the people, consisting of *a.* a few warriors, *b* professed cooks in the service of the chiefs, *c* those who tilled the soil and had no other occupation ⁵⁾ Mariner only makes mention of captive women, so it is probable that no men were taken prisoners in their wars ⁷⁾ West states that there was a monarchical despotism, supported by an hereditary aristocracy The people were divided into several, strictly separated, classes The lowest class were the *tuas*, common people, subdivided into different

trades: carpenters, fishermen, etc. The feudal principle, that the whole country belonged exclusively to the king, made the people slaves¹⁾ Such „slavery” of a whole people is not, however, slavery in the true sense of the word. Of slavery proper West makes as little mention as Mariner. We may, therefore, safely suppose that Meinicke and Gerland have been mistaken, and that slavery did not exist here.

With reference to *Samoa* Gerland speaks of two political parties who were always at war, „but they do not destroy their adversaries”, he says „nor enslave them, as frequently members of the same family belong to different parties”²⁾. According to Meinicke the prisoners were at different times differently disposed of; but among these modes of treatment slavery is not mentioned³⁾. Turner, a good authority, remarks: „Prisoners, if men, were generally killed; if women, distributed among the conquerors”⁴⁾. We are not told whether these women were married, or kept in a slave-like state; but even in the last case this would be slavery of women only, and therefore not slavery in the proper sense. These particulars being given, and slavery not being mentioned by any of our authors⁵⁾, we may safely infer that it did not exist.

Gardiner, in an excellent article on *Rotuma*, says: „Slaves as such did not properly exist”⁶⁾.

Gerland and Meinicke, enumerating the social classes on the *Rarotonga* group (or Hervey Islands, or Cook's Islands) make no mention of slaves. According to Meinicke the lowest class are the common people⁷⁾. So slavery seems unknown here.

In *Tahiti*, according to Ellis, „the lowest class included the *titi* and the *teuteu*, the slaves and servants; the former were

those who had lost their liberty in battle, or who, in consequence of the defeat of the chieftains to whom they were attached, had become the property of the conquerors. This kind of slavery appears to have existed among them from time immemorial. Individuals captured in actual combat, or who fled to the chief for protection when disarmed or disabled in the field, were considered the slaves of the captor or chief by whom they were protected. The women, children and others who remained in the districts of the vanquished, were also regarded as belonging to them; and the lands they occupied, together with their fields and plantations, were distributed among the victors. . . . If peace continued, the captive frequently regained his liberty after a limited servitude, and was permitted to return to his own land, or remain in voluntary service with his master" ¹⁾. Though the second kind of slaves Ellis enumerates, the subjects of vanquished chiefs, probably were not slaves, and the frequent liberating of captive slaves proves that slavery did not prevail to any great extent, Ellis's account shows that to a limited extent it was present.

Of *Hawaii* Ellis says: „The wives and children of those whom they had defeated were frequently made slaves, and attached to the soil for its cultivation, and, together with the captives, treated with great cruelty." Captives were sometimes spared, „though perhaps spared only to be slaves, or to be sacrificed when the priests should require human victims." But in enumerating the social classes he makes no mention of slaves. „In the fourth [lowest] rank may be included the small farmers, who rent from ten to twenty or thirty acres of land; the mechanics . . . indeed, all the labouring classes, those who attach themselves to some chief or farmer, and labour on his land for their food and clothing, as well as those who cultivate small portions of land for their own advantage" ²⁾. According to Meinicke there were slaves, but not many; they

1) Ellis, *Pol Res*, III p. 95

2) *Ibid.*, IV pp 161, 160, 413

were undoubtedly descendants of prisoners, and considered inferior even to the lowest class of freemen, from whom, however, they were not strictly separated. The conquered land was divided by the conqueror among his men; the inhabitants were made slaves ¹⁾. Marcuse in one place only makes mention of slaves: „To allure the sharks they occasionally made human sacrifices, especially among the slaves.” But he states that they spared the lives of their captives only when they intended them to be sacrificed later on to their gods ²⁾. It is not easy to decide whether the slaves our ethnographers speak of were really slaves. From Ellis's description of social classes it would seem, that the lowest class consisted of freemen; moreover, no particulars are given concerning the state of the slaves. Our opinion is, that the writers have mistaken for slaves inhabitants of conquered districts and persons intended to be sacrificed; but the lack of details prevents our arriving at any definite conclusion.

Gerland states that on the *Marquesas Islands* „slaves were rare; like the foreigners, who were always considered as enemies, they had no rights, could be quite arbitrarily treated and even killed” ³⁾. According to Meinicke, however, prisoners were either sacrificed and eaten, or spared and adopted into the conquering tribe ⁴⁾. De Rocquefeuil also states that the prisoners were eaten, unless, by the priests' intervention, they were buried; at any rate they were killed ⁵⁾. Moerenhout tells us that the sole object of their wars was to obtain a cannibal repast ⁶⁾. These several statements make it probable, that there were no slaves, and that Gerland has mistaken for slaves persons intended to be sacrificed. Letourneau holds the same view of the matter: „Everything seems to indicate, that slavery

1) Meinicke, I c, pp 303, 304

2) Marcuse, pp 116, 114.

3) Waitz-Gerland, VI p 216

4) Meinicke, I c II p 254

5) Andree, p 64

6) Moerenhout, II p 31

did not exist in the Marquesas Islands" ¹⁾. Hale also states that there were no slaves ²⁾.

The natives of *Tukopia*, according to Gerland, formerly kept slaves, who were prisoners of war ³⁾. No more details are given.

The same authority tells us, that in the beginning of the present century the inhabitants of *Anaa* (*Paumotu group*) conquered 38 islands, and brought the inhabitants as slaves to their own island. When they became Christians, in 1810, they set their prisoners free, and part of the latter returned to their island ⁴⁾. No more particulars being added, it is doubtful whether these prisoners were really slaves, the more so as a regular slave system is not mentioned.

Result Positive cases: *Maori*,
Tahitians.

Negative cases: *Tongans*,
Samoans,
Rotumians,
Rarotonga islanders,
Marquesas islanders,
Hawaiians.

No conclusion: *Tukopia islanders*,
Paumotu islanders.

§ 7. *Micronesia*.

According to Meinicke none of the describers of the *Marshall Islands* make mention of slaves. Gerland, too, does not speak of slaves ⁵⁾. Kohler, however, asserts that there are slaves. A free woman, marrying a slave, becomes the slave of her husband's master, unless the slave, on marrying, is

1) Letourneau, p. 183

2) Hale, p. 36

3) Waitz-Gerland, V, 2 p. 194

4) Ibid., VI p. 218

5) Meinicke, Die Gilbert- und Marshall-Inseln, p. 409, Waitz-Gerland, V, 2, p. 122.

set free by his master. „Regarding the slaves or serfs, we knew already, that they form a separate class of the *armij kajur*. Further details are given us now about the state of things in Nauru. The slave cannot hold any property, at least no landed property. He has to till the land of his lord, to deliver the fruits of it, getting only his livelihood. The lord had formerly a *ius vitae et necis*, and frequently inflicted corporal punishment on the slave for insubordination.” The slave is not allowed to have more than one wife. When the master allows his slave to marry a free woman, the slave becomes free”¹⁾. Kohler refers to a report of Jung (apparently an unprinted manuscript) and further to Meinicke, Hensheim, Hager and Kubary. As for Meinicke, we have seen that he thinks the existence of slavery improbable. According to Hensheim the lowest class is composed of the poor, the *armidwon* or *kajur*. They are forbidden to take more than one wife. The next class is that of the *leadagedag*, who own property, have in most instances three wives, and are provided with victuals by the *kajur*²⁾. Kubary says: „The common people are called *armij kajur* and form the greater part of the subjects. They have no property, except the land allotted to them by the chief, who can take it from them at his pleasure. Every week they have, each of them, to provide the chief with prepared food, the quantity and quality of which are determined.” These people according to Kubary, form the lowest class³⁾. Hager quite agrees with Kubary, to whom he frequently refers⁴⁾. We see, that none of Kohler's informants (except possibly Jung) make any mention of slaves. Yet Kohler refers to all these writers in order to prove the existence of slavery, but without in the least justifying his own statement, in which, in opposition to them, he calls the lowest class slaves. The accounts of our ethnographers, however, are not

1) Kohler, Das Recht der Marschall-Insulaner, pp 448, 450

2) Hensheim, p 80

3) Kubary, Die Ebongruppe, pp 36, 37

4) Hager, p 96.

very suggestive of slavery. According to Hemsheim the lowest class provide with victuals the next class (not individual members of the higher classes, who would be their masters, if they were slaves). And if we may believe Kubary, the eminent ethnographer, they are tenants, paying a rent in kind. It might be, that at least in the isle of Nauru, described by Jung, there are slaves; but this does not at all appear from what Kohler tells us. These „slaves” who own no land and are often punished, present much more the character of oppressed tenants or agricultural labourers than of slaves. When Kohler states, that the slave who marries a free woman becomes free, we may suppose that the meaning is this: the agricultural labourer, who marries a woman of the landowning class, is no more dependent on his master, the landholder. So we may safely infer, that slavery does not exist on the Marshall Islands.

Gerland, minutely describing the social classes on the several *Caroline Islands*, only in one passage speaks of slaves. According to him on the isle of *Ponape* there are three classes: chiefs, freemen, and slaves. But no other details are given about these slaves, than that the land „belongs exclusively to the two highest classes; the third class are attached to the soil on which they live”¹⁾. We may suppose that Gerland has made a similar mistake here to that of Kohler with respect to the Marshall Islands, the more so as on the isle of *Kusaie*, also belonging to the Caroline group, the common people are subjected to the higher classes who own all the land²⁾. Kubary, describing the *Mortlock Islands* (belonging to the same group) says: „Except the division in tribes, there is no social division in the Caroline Islands, such as in classes, ranks, secret societies, etc.; and I believe that all suppositions of former observers relating to such a state of things result from ignorance of tribal government. With these natives the notions of „noble”, „gentleman”, „commoner” have but a relative value; and special titles such as „king”, „chieftain”, „prince”, etc. depend

1) Waitz-Gerland V, 2, p. 118

2) Ibid., pp. 120, 121.

wholly upon the individual pleasure of the observer" ¹⁾. The same writer tells us that on the isle of *Ruk* in warfare „such captives as may accidentally be taken are killed," which statement is not very suggestive of slavery ²⁾. Graffe, compiling Tetens and Kubary's notes on the inhabitants of *Yap*, speaks of slaves: „The population is composed of three classes, chiefs, freemen, and slaves or *pomilingaus*. The latter live together in separate villages and are obliged daily to provide the freemen with agricultural products, and whenever the chiefs require it, to aid in constructing houses and canoes. All the slaves possess, even their wives and daughters, may at any time be required by the freemen and used at their pleasure. As we have already hinted, the slaves are not allowed to wear the head-ornaments that the freemen are in the habit of wearing, not even the combs worn in the hair; and when waiting upon the chiefs, they must approach them in a creeping, bowing attitude. One would, however, fail in supposing, that all labour is exclusively incumbent on the slave-class. They are only bound to definite taxes, viz. to a tribute of victuals, and of mats and other materials for house-building; and their slave-state consists rather in a low and dependent condition than in being taxed with labour" ³⁾. The last sentence sufficiently proves, that these people are not slaves, but only a despised lowest class. A slave always has an individual master, whereas these people are subjected to the higher classes *en bloc*. The above survey of ethnographical accounts leads us to the conclusion, that slavery is unknown on the Caroline Islands.

In Gerland's detailed account of government and social classes among the ancient inhabitants of the *Mariann Islands* no mention is made of slavery; and as our author uses this word in a too wide rather than in a too restricted sense, we may safely suppose that there are no slaves

1) Kubary, *Mortlock-Inseln*, p. 246

2) Kubary, quoted by Schmeltz and Krause, p. 373

3) Graffe, p. 94

4) Waitz-Gerland, V, 2, pp. 112—114

Kubary tells us, that „among the *Pelau islanders* there can be no question of a division of the people in ranks or classes, of a nobility in our sense of the word”¹⁾. In another place he tells us that a chief's wants are generally provided for by the work of dependent relatives, who are a kind of adopted children. If their work does not suit them, they leave their employer²⁾. Semper speaks of a class of bondmen (*Horigen*); but in another place he states that they work for wages; so they are neither slaves nor serfs, but a despised working class³⁾. So slavery does not exist here⁴⁾.

On the *Kingsmill* or *Gilbert Islands*, according to Wilkes, there are three classes: chiefs (*uea*), lendholders (*katoka*), and slaves (*kawa*). Slaves marry only with their master's consent, and are entirely his property. „He who has none [no land] is considered as a slave, and can hold no property whatever.’ But our informant adds that „they have no term to designate a poor man, except that of slave”; so it seems that the slaves he speaks of were not slaves in the true sense of the word⁵⁾. Meinicke enumerates the following classes: chiefs (in Tarawa: *uea* or *oamata*, in Makin: *jomata*), free landholders (in Tarawa: *katoka*, in Makin: *tiomata*), and the common people (in Tarawa: *kawa*, in Makin: *rang*); and he adds: „There are also slaves, who originally were captives, and whose children have remained so”⁶⁾. So the *kawa*, called slaves by Wilkes, are called freemen by Meinicke, according to whom there is a class of slaves still below them. Behm asserts that on Makin there are slaves besides the three other classes⁷⁾. The best description is given by Parkinson. According to him there are kings (these only

1) Kubary, Soc. Einr. der Pelauer, p. 72

2) Kubary, Die Palau Inseln, p. 232

3) Semper, Die Pelau-Inseln, pp. 36, 79

4) This is also proved (if any further proof were needed) by Kubary's detailed description of fishing and agriculture: the former is carried on by the men, the latter by the women, nowhere is any mention made of slaves. Kubary, Industrie der Pelau-Insulaner, pp. 123 sqq., 156 sqq.

5) Wilkes, pp. 88, 90, 96

6) Meinicke, Die Inseln des stillen Oceans, II p. 340

7) Waitz-Gerland, V, 2, p. 124.

on some islands); further great landholders; then the class of small landholders. Then there are two subjected classes. One is the class of the *te torre*, who live as vassals on the lands of the great landholders; they get a small piece of land for their own use; they must provide their lord with men when in war, and bring him the number of cocoanuts he desires, and what he needs for his household. The lowest class are the *te bei* or *kaungo*. They have no property, no land to live upon; they live with the great landholders by whom they are maintained; they on their part must work for their lord, i. e. fish, prepare food, etc. The lord, by giving them a piece of land, can raise them to the class of the *te torre*. These two classes have no voice in government matters; they follow their lord without grumbling; his will is their will; an offence against the lord is considered by them as a personal offence, and avenged as such. Generally no one marries outside his class. In ordinary life there is no difference between master and vassal; they often sleep on the same mat; they drink, dance and play together; they wear the same kind of dress. When a poor man dies, a wealthy inhabitant of the village generally provides for his family; but they must labour for him and are, so to speak, his slaves¹⁾. We have to examine now, whether these two lowest classes are slave-classes. We may remark, first, that, whereas most of our ethnographers make a large use of the word „slave”, Parkinson does not use it, except in the last sentence, and there with the qualification „so to speak”. Moreover, some particulars are not mentioned, which we should expect to find in such an elaborate description, if slavery really existed; e. g. it is not stated that the subjected persons are bought and sold; nor that care is taken that they do not run away; nor that the master is not at all, or only to a limited extent, responsible for his behaviour towards the person who serves him. As little does it appear, that these vassals become such in the same manner in which men generally become slaves. It is only stated that the family

1) Parkinson, *Gilbertinsulaner*, pp 98, 99, 39

of a deceased poor man fall into a state of dependence upon a rich inhabitant of the village; but it is not clear, whether they voluntarily or involuntarily join the rich man's family. The principal objects of property, says Parkinson, are houses, lands, and canoes¹⁾. Were there slaves, they would have been mentioned here too. These considerations lead us to the conclusion, that there are no slaves on the Gilbert Islands.

Result. Negative cases *Marshall islanders,*
 Caroline islanders,
 Marianne islanders,
 Pelau islanders,
 Kingsmill islanders.

Schurtz asserts that in Polynesia and Micronesia slaves are found everywhere; and Gerland is of the same opinion regarding Polynesia²⁾. Our survey of both these groups shows that these writers are wrong. In Micronesia slavery is probably quite unknown, in Polynesia absence of slavery is the rule, slavery the exception.

§ 8. *Malay Archipelago.*

I. *Malay Peninsula*

The best information on the wild tribes of Malacca is afforded by De Morgan. In his elaborate account of the *Sakays* and *Somang* no mention is made of slavery. Among the *Sakays* „the debtor and his family work for the creditor during one or two moons, according to the decision of the panghulu (village-chief)”. This certainly is a commencement of debt-slavery; but such compulsory labour, limited beforehand to one or two months, is not yet slavery in the true sense³⁾.

Vaughan Stevens too makes no mention of slavery. But

1) Ibid. p. 43

2) Schurtz p. 230. Waitz-Gerland, V, 2, p. 124

3) De Morgan, *Exploration, divisions. Linguistique* (see especially p. 17) and *Ethnographie*

most of his notes relate to religious beliefs and practices; his remarks on social institutions are very scanty ¹⁾.

Some other authors describe the *Manthras* ²⁾ and *Jakuns* ³⁾. Nowhere is it stated that slavery exists. As, however, the terminology here is very unreliable, and it is not easy to make out, whether the latter are really other tribes than those described by De Morgan, we shall consider only the Sakays and Somang as clear negative cases.

II. Sumatra and neighbouring islands.

The existence of slavery among the *Battaks* in general is vouched for by Brenner and Junghuhn ⁴⁾.

Ethnographical records, relating to separate divisions of the *Battaks*, sufficiently prove the present or former existence of slavery among the *Battaks on the Pane and Bila rivers* ⁵⁾, *Battaks of Mandheleng* ⁶⁾, *Battaks of Pertibie* ⁷⁾, *Karo Battaks* ⁸⁾, *Raja Battaks* ⁹⁾, *Battaks of Angkola* ¹⁰⁾.

Among the *Battaks of Silindung* slavery has never existed, according to Meerwaldt ¹¹⁾. Whether he means only slavery in the restricted sense, or also pawning, is not clear.

The *Toba-Battaks*, according to Meerwaldt, formerly had slaves; but now slavery is dying out under Dutch influence. Van Dijk, who visited the Habinsaran district in the Tobalands, states that in some parts of the district there were slaves, in others there were not. Whether the latter fact is to

11) L c

be accounted for by Dutch influence, does not appear from his very short notes ¹⁾).

On the *Lubus* we have found only two short articles, in which slavery is not mentioned; but this does not prove very much ²⁾).

None of the describers of the *Kubus* make any mention of slaves; so we may suppose, that slavery does not exist among them ³⁾).

De Groot gives a detailed account of slavery and pawning in the *Lampong* districts ⁴⁾).

In *Nias* slavery certainly exists ⁵⁾).

The *Mentawai* islanders very probably have no slaves. None of their describers make any mention of slavery ⁶⁾). „Their whole warfare consists of treacherous attacks, in which nobody's life is spared” ⁷⁾).

On the *Anambas*, *Natuna* and *Tambelan* islands, belonging to the *Lingga-Riouw* group, there are debtor-slaves ⁸⁾).

Most of the writers on *Engano* make no mention of slavery ⁹⁾). According to Walland the Enganese wear ornaments in their ear-laps, which are pierced for that purpose. If anybody's ear-lap is broken, he incurs great disgrace; he is no longer listened to in any deliberation, nor considered a notable in his tribe, and becomes the slave of his relatives, for whom he is obliged to work. And Rosenberg says „If a criminal does not pay the fine, this is done by his family; but if they are unable to pay, they sell him as a slave. So slavery exists; but it is

of a very mild kind, and the number of slaves is very small" ¹⁾. The fact that both authors speak of slavery only in connection with these particular cases, whereas the others do not speak of it at all, makes us doubt, whether what Walland and Rosenberg call slavery is slavery in the true sense. So we cannot come to a clear conclusion.

III. Borneo.

Among the *Hill- or Land-Dyaks* (Orang Gunong) slavery in the restricted sense and slave-trade did not exist, but, says Low: „the system of slave-debtors is carried on, though to a very small extent.' Later on this kind of slavery also disappeared ²⁾.

The *Dyaks on the Barito* have slaves and pawns ³⁾.

The *Sea-Dyaks* also keep slaves, but not many ⁴⁾.

Slavery also exists among the *Dyaks on the Rejang river* ⁵⁾, *Biadju-Dyaks* ⁶⁾, *Ot-danoms* ⁷⁾, *Olo-ngadju* ⁸⁾, *Dyaks of Tompassuk* ⁹⁾, *Kayan* ¹⁰⁾, *Muruts* ¹¹⁾, *Dyaks of Sambas* ¹²⁾, *Kindjin-Dyaks* ¹³⁾

Denison informs us that the *Dusuns* have no slaves ¹⁴⁾.

Von Dewall, in his notes on the *Dyaks of Matan or Kaping*, speaks of slaves of the chief. Whether these are the only slaves does not appear ¹⁵⁾.

Of the *Dyaks of Sempang* he says the same, and adds that pawning is unknown amongst them. Here too we cannot arrive at a clear conclusion ¹⁾).

The *Rambai- and Sebruang-Dyaks* probably have no slaves, for it is stated, that their chiefs have no privileges, only, when some accident, illness for instance, prevents them from cultivating their own rice-fields, this is done by the people ²⁾). If there were slaves, the chiefs would not have to cultivate their own rice-fields. Moreover our author in his fairly detailed description, would probably have mentioned slavery, if it existed.

IV Celebes

Slavery is proved by good authorities to exist or have existed in several parts of this island. Such is the case in the *Minahassa* ³⁾), in *Bolaang Mongondou* ⁴⁾, in *Lapu lo Holontalo* ⁵⁾), in *Buool* ⁶⁾), among the *Alifurs of Central Celebes* ⁷⁾), in the district of *Sandjai* ⁸⁾, in *Bangkala* ⁹⁾ and in *Salajer*, an island near the South Coast of Celebes ¹⁰⁾

V. Little Sumda Islands and Moluccas

Slavery on these islands seems almost universal. About the following islands and groups of islands we have been able to obtain some information. *Sumbawa* ¹¹⁾), *Sumba* ¹²⁾), *Toroes* ¹⁾), *So-*

lor group¹⁾, Boneate and Kalao²⁾, East Timor³⁾. West Timor⁴⁾, Savu⁵⁾, Rote or Rotti⁶⁾, Wetar⁷⁾, Keisar⁸⁾, Leti⁹⁾, Dama¹⁰⁾, Luang-Semata group¹¹⁾, Babai group¹²⁾, Tenimber and Timorlao islands¹³⁾, Aru islands¹⁴⁾, Kei islands¹⁵⁾, Watubela islands¹⁶⁾, Seranglao-Gorong group¹⁷⁾, Serang¹⁸⁾, Ambon and the Uluase¹⁹⁾, Sengir and Talauer islands²⁰⁾.

In all these cases it is clear that slavery either formerly existed or still exists

Slaves are also employed by the *Galila* and *Tobelorese* on Halmahera²¹⁾, and by the inhabitants of the district of *Kau* on the same island²²⁾

Riedel states, that on *Buru* there were formerly slaves, and gives some details about slavery as it was carried on here Wilken however says that there are neither slaves nor pawns²³⁾ Whether the latter means to say, that slavery did not exist

at the time at which he was writing (1875), or that it had never existed, is not clear. So we are left in doubt as to the former existence of slavery here.

VI. Philippines.

The *Tagals and Visayas*, at the time of the conquista, already practised slavery on a large scale ¹⁾).

Slavery certainly exists among the *Bagobos* ²⁾, *Manobos* ³⁾, *Maguindanaos*, and *inhabitants of the Sulu islands* ⁴⁾, and *Samales* ⁵⁾).

Among the *Subanos* slaves are sacrificed at funerals ⁶⁾. But whether these so-called slaves are really slaves, or persons captured or purchased for sacrificing purposes only, does not appear.

The *Kiangans* sell their debtors as slaves; whether within the tribe or abroad we are not told ⁷⁾.

In Blumentritt's rather short article on the *Bungians* no mention is made of slaves ⁸⁾).

Schadenberg, describing the *Bontoc people*, does not speak of slaves, and the particulars he gives make its existence improbable. They are zealous head-hunters. They take the heads of men and women; only children are spared, though what they do with these children does not appear. Sometimes they take a prisoner, who is then tied to a tree and tortured to death ⁹⁾).

The describers of the *Igorrotes* make no mention of slavery ¹⁰⁾. So its non-existence is probable, though not certain.

10) Blumentritt, *Ethnographie*; Meyer, *Igorroten*, *Jagor*, *Philippines*.

Of the several describers of the *Negritos* we have consulted, none make any mention of slavery ¹⁾. So we may safely infer that they have no slaves.

VII. Madagascar.

The Hovas and kindred tribes are considered by many investigators to be Malays. Schurtz also classifies them among the Malays in the widest sense of the word ²⁾. The anthropologists do not yet agree about the origin of the Hovas; but as the divisions of this chapter are only intended to give the reader a clear survey of the matter, and not to answer any anthropological purpose, we may treat them here as well as elsewhere.

The existence of slavery among the *Hovas* is proved by the statements of several good authorities ³⁾.

Sibree, describing the *Betsileo*, *Betsimisaraka*, *Bara*, *Tankay* or *Bezanozano*, *Sihanaka* and *Tanala*, makes no mention of slavery; but his notes are not detailed enough to make its non-existence certain ⁴⁾.

Hildebrandt and Grandidier speak of slaves among the *Antankarana* ⁵⁾. As, however, in their short notes only slaves of the king are mentioned, we may put this down as a doubtful case.

We shall add here a few notes on some Malay peoples, that have attained to a too high degree of civilization to be quoted here as instances of savages having or not having slaves. The purpose of this addition is only to complete this survey of the Archipelago, and to show those readers, who are not Dutchmen, what literature exists on these peoples.

In *Java* slavery has not prevailed for centuries. „In Mohammedan law a large place is taken up with regulations of slavery, of the rights of masters and slaves, and of the manner in which the latter can acquire their freedom. The peculiar state of the aboriginal Javanese society prevented the application of nearly all precepts relating to this matter. Before the introduction of Islam slavery proper seems to have been unknown, the universal subjection of the mass of the people, as Sudras, to the members of the higher castes, had made slavery superfluous. Nor has Islam introduced slavery into Java, for although in later times Javanese chiefs in a few cases kept slaves, this was done in imitation of the Europeans, and the legal status of these slaves depended on Roman-Dutch law, not on Mohammedan law.” The *desas* or villages, that did not accept Islam, were conquered, yet their inhabitants were not enslaved, as is generally done by the Mohammedans in their holy wars, but the whole villages *en bloc* were reduced to a subjected state: they had to pay extraordinary tributes and to perform services to the Sultans. This ancient state of things remained in force, even when gradually the whole population accepted Islam. Even the concubines of the chiefs are not captured or

purchased slaves, but women taken from among the common people; and although they are kept in a somewhat slave-like condition, they are not treated as Mohammedan law requires the female slaves, who are used as concubines, to be treated ¹⁾. This passage from Veth's book does not, however, inform us as to whether there were slaves before the Hindu invasion and some time after. In the „*Encyclopaedie voor Nederlandsch Indie*” it is stated ²⁾, that in old times Africans were imported as slaves into Java, as appears from an inscription of 800 A. D. The continued investigation of Javanese history will probably throw more light on the subject.

In *Bali* slavery certainly exists, or at least formerly existed, but, according to Liefcrinck, only the chief and his family have slaves ³⁾. Waanders however, who gives a detailed account of the Balinese slave-system, asserts that even Sudras have slaves, though he speaks but incidentally of this ⁴⁾. Perhaps the slaves kept by the common people are only debtor-slaves; for, according to Liefcrinck, debtors serve their creditors, and are sometimes sold by auction ⁵⁾. Tonkes, who has (rather deficiently) collected the literature on the Balinese, does not solve the question. At any rate, slavery here is not a fundamental institution. The chief has great power, and the Hindu caste-system prevails, so that the social classes are widely separated; the Sudras are at the mercy of the upper castes ⁶⁾. Slavery, though discountenanced by the Dutch government, still prevailed as late as 1877 ⁷⁾.

Van Eek has some notes on *Lombok*. Sasaks and Balinese of the Sudra-caste frequently become slaves of the rich, as a punishment or in payment of debts ⁸⁾. We may suppose, that

the state of things here does not differ much from that which prevails in Bali.

Van Hasselt gives a detailed account of slavery among the *Malays of Menangkabao*. In 1876 the slaves and pawns on the West Coast of Sumatra were emancipated by the Dutch government. But in the territories which are not under Dutch control slavery is still carried on to a great extent. In the little independent states a chief's power depends upon the number of his slaves, who till his lands and strengthen his force in warfare. The slaves in the restricted sense are purchased and captured persons and their offspring. Besides these there are pawns¹⁾. Several further particulars are given in Van Hasselt's valuable book.

In many other Malay districts of Sumatra slavery exists²⁾

Particular mention has to be made of *Atjeh*, where slavery prevails to a great extent³⁾.

Matthes gives some details on slavery among the *Macassars and Bugnese* of South Celebes⁴⁾

In *Tidore* slavery formerly existed, many slaves being procured from New Guinea⁵⁾ It has, however, been abolished by the Dutch government⁶⁾.

§ 9. Indo-Chinese Peninsula.

Some tribes of this group undoubtedly have slaves. These are the *Kakhyens* ¹⁾, the *Shans of Zimmé* ²⁾, the *Lawas* and the *Hill-tribes of North Aracan* ³⁾, one of these hill-tribes being the *Khyoungtha* of Chittagong ⁴⁾.

The *Lethlas* have no slaves ⁵⁾.

The *Steins*, according to Colquhoun, sometimes seize a slave in order to sacrifice him ⁶⁾. No more particulars being given, we cannot make out whether the word slave is used here in its true sense, or means a captive taken to be sacrificed.

Mason remarks on the *Karens*: „In war they kill without regard to age or sex . . . The head of the war keeps the captives a considerable time, when, if none of their friends come to redeem them, he sells them off to other districts for oxen or buffaloes if practicable, that he may have an ox or a buffalo to give to each village that came to his aid” ⁷⁾. So the Karens seem to prefer oxen and buffaloes to captives. There are, however, many debtor-slaves among the *Karen-Nees* ⁸⁾. They are also noted for their kidnapping propensities; but it seems that the kidnapped are only intended for sale abroad ⁹⁾. At any rate there are debtor-slaves, and so slavery exists.

When the *Smg-Phos* of Upper Assam were conquered by the English, the latter found in their villages numerous Assamese slaves, who as soon as possible ran away from their masters. We are not told whether they kept these slaves for

8) Colquhoun, p. 69.

9) Ibid., pp. 40, 69, 70.

their own use or for sale. Further Dalton and Rowney speak only of female slaves ¹⁾).

We may add here the inhabitants of the Andaman and Nicobar Islands in the Bay of Bengal.

Although Man does not explicitly state that the *Andamanese* have no slaves, his elaborate account of their social life sufficiently proves that they are unacquainted with slavery. Social status is dependent on relationship, on skill in hunting, fishing etc., and on a reputation for generosity and hospitality. A child captured in war „would meet with kindly treatment, in the hope of his or her being induced ultimately to become a member of the captor's tribe” ²⁾

Of the *Nicobarese* Svoboda says „All authors agree that nowhere in these islands is there subordination, all inhabitants being of the same rank. Only older and more experienced people have somewhat more influence than the rest” ³⁾ Hence we may infer that slavery does not exist.

2) Man, pp. 109-356.

3) Svoboda, p. 191

4) Cooper, p. 238, Dalton, p. 15, Spencer Deser. Soc. V p. 15

5) Shaw, p. 89

Dalton gives several particulars about slavery among the *Garos*. Eliot also affirms that they have slaves ¹⁾).

The *Kookies*, according to Macrae, „at times . . . make captives of the children, and often adopt them into their families, when they have none of their own; and the only slaves among them are the captives thus taken” ²⁾. What our author means is not quite clear. The children who have been adopted certainly are not slaves. Perhaps a part only of the captured children are adopted, the rest constituting the slave-class of the *Kookies*; but this is not clearly stated. Lewin asserts that all the hill-tribes (Toungtha, divided into Lhoosai, Tipperah and *Kookies*) formerly had debtor-slaves ³⁾; but as none of our other authorities make any mention of this, we doubt whether this general remark applies to the *Kookies*, the more so as, according to Macrae, „the only slaves among them are the captives”. So it becomes very doubtful whether the *Kookies* have slaves. Dalton’s statement that „all the enemies he [the *Kookie*] has killed will be in the happy hunting-fields in attendance on him as slaves” ⁴⁾ is not sufficient to decide the question. One thing only is clear: the *Rajah* has slaves. According to Dalton murderers and thieves become slaves of the *Rajah*. Stewart affirms the same of those guilty of theft, burglary or arson, and Butler of thieves ⁵⁾. But if only the *Rajah*, who represents the public power, has slaves, the *Kookies* are not properly to be called a slave-keeping people. Whether there are other slaves, besides those of the *Rajah*, is not sufficiently clear.

The *Todas* very probably have no slaves. Neither Metz, nor the writers quoted by Spencer, make any mention of slavery, though they fully describe their social life ⁶⁾.

The *Santals* also very probably are unacquainted with sla-

2) Macrae, p. 188

3) Lewin, p. 89

4) Dalton, p. 46

5) Dalton, p. 45, Stewart and Butler, as quoted by Spencer, l. c. p. 14

6) Metz, Spencer, Dösch Soc. V

very. According to Hunter „caste is unknown among the Santals". „The classification of the Santals depended not upon social rank or occupation, but upon the family basis." Dalton, describing the Santals, does not speak of slaves¹⁾.

The *Khonds* formerly offered human sacrifices. The victims were purchased, and often kept for many years before being sacrificed. Our author adds: „I may just allude here to another class of persons who are purchased by the *Khonds*, or procured by them for adoption into their families, as helps in household affairs, and in field labours. These are called *Possia Poes*, and are usually obtained when young. They run little or no risk of being sacrificed, and very often marry into the families of their purchasers, and in the course of time merge into the general population." In another passage these *Possia Poes* are called *serfs*: „These *serfs* are well treated, and in no immediate danger; but there is always a remote probability of their sacrifice"²⁾. As it is stated that these *Possia Poes* are absorbed into the general population, we may safely conclude that they are not slaves.

The *Lushais*, according to Dalton, enslave women and children³⁾.

Of the *Manipuris* Dalton says that „slavery is an institution amongst them", and he gives some details besides. So we need not doubt its existence, though Watt makes no mention of it⁴⁾.

Among the *Jyntias and Kasias* the *Rajah* has slaves⁵⁾. Whether there are any other slaves does not appear.

„There is no such thing as slavery among the *Oraons*" according to Dalton⁶⁾.

The *Korwas* also very probably have no slaves. In their raids they kill all they meet⁷⁾.

1) Hunter, Rural Bengal, I pp 200, 202, Dalton, pp 207 218

2) Campbell, pp 53, 79

3) Dalton, p 114.

4) Dalton, p 51, Watt

5) Dalton, p 57

6) Ibid, p. 254

7) Ibid, p 230

The *Kafirs* have slaves, according to several writers ¹⁾.

Among the *Padam Abors* slavery undoubtedly exists ²⁾.

Dalton says of the *Dophlas*: „They have normally the same Mongolian type of physiognomy, but from their intercourse with the people of the plains and the number of Asamese slaves, which they have by fair means or foul acquired, it is much modified and softened” ³⁾. Nothing more is added about slavery. Perhaps these „slaves” are simply captured women, no other slaves being ever taken. Whether slavery really exists is not clear.

The *Nagas* keep slaves, if we are to believe Grange who „saw many Muneeporees who had been thus seized whilst young, and sold both amongst Kookies, Cacharees and Nagas”. „The children of slaves are slaves.” Miss Godden, however, remarks: „Slavery was unknown among one or more tribes [of the Nagas] according to Dr. Brown.” „Among the Aos [one of the Naga tribes] it is said to have been universal” ⁴⁾.

Among the *Bodo and Dhumals* „there are neither servants nor slaves, nor aliens of any kind” ⁵⁾.

The *Veddahs* of Ceylon, according to Sarasin, are unacquainted with slavery ⁶⁾.

Result. Positive cases: *Meshmees*,
Garos,
Lushais,
Manipuris,
Kafirs,

1) Ujfalvy, Arjens, pp. 359, 359 Robertson, pp. 78, 79, Rousselet, p. 223

2) Dalton, p. 24 Letourneau (p. 305) is in doubt whether slavery really exists here, first because the Padam Abors are organized in republican and even communistic clans, in which slavery is hardly possible (why?), secondly because the young slaves live together with the young freemen in communal long houses. This last remark proves that Letourneau is not very familiar with the character of primitive slavery

§ 11. *Central Asia.*

The *Kazak Kirghiz*, according to Pallas „much preferred the securing of a slave to the killing of a man. They did not treat their slaves cruelly, as long as the latter behaved well” But the information we get from other authors shows that they were not a slave-keeping people. Boutakoff says nothing about slavery. According to Ujfalvy the poor must serve the rich; he calls this a real serfdom. But he adds that, if the poor do not wish to serve, they must borrow from the rich at 100 per cent. interest. So these poor are compelled to serve by hunger, not by any social rule. Chambers says: „They.... have well earned for themselves the title of the „Slavehunters of the Steppes” by seizing upon caravans, appropriating the goods, and selling their captives at the great slave-markets at Khiva, Bokhara, etc. Their wealth consists of cattle, sheep, horses, and camels”¹⁾. This is clear: the captives are sold abroad, and do not serve as slaves among the Kirghiz themselves; therefore they are not enumerated as forming part of their wealth. The best describer of the Kazak Kirghiz that

1) Pallas, Reise, I, p 338, Boutakoff, Ujfalvy, Expéd. scient., p 112, Chambers as quoted by Spencer, Descr. Soc V p. 15.

we know of, Levchine, agrees with Chambers. „Slavery is unknown among them.” „The Turks, the Persians, and nearly all other sectaries of Mahomed keep slaves The Kirghiz, on the contrary, have no slaves” ¹⁾. In several passages of his book, however, he makes mention of slaves ²⁾. But this will be understood, if we pay attention to two other statements of his. „They do not kill their prisoners, but sell them to the Bokharians, Khivians, and other neighbouring nations.” They buy many commodities from their neighbours, and „in exchange provide them with slaves captured on the Russian frontiers” ³⁾. So the Kirghiz in Levchine’s time made slaves; they did not, however, themselves employ them; they were only slave-traders and not a slave-keeping people. Radloff, who many years after Levchine visited the Kazak Kirghiz, supposes that they formerly kept slaves. He says: „The former serfs and slaves of the sultan, who have been for many decades emancipated, always try still to nomadise in the vicinity of the sultans, and, though at present entirely on a level with the other Kirghiz, are still called *telenguts*.” „The denominations *kul* (male slave) and *lung* (female slave) now mean male and female servant” ⁴⁾. But we may compare this with a statement of Levchine’s: „We do not arrange in a separate class the *telenguts* or servants of the khans, nor the *kuls* or slaves. The former are taken from among the Kirghiz and enjoy the same rights; the latter are looked upon as personal property or commodities and are not Kirghiz. They are Russian, Persian, Kalmuck, etc. prisoners” ⁵⁾. We see that Radloff’s „serfs or slaves”, the *telenguts*, were not slaves, and the *kuls* were captured slaves intended to be sold. Our inference is that the Kazak Kirghiz in their former independent state did not keep slaves.

2) Ibid, pp 305, 331, 368, 369, 399, 502

3) Ibid, pp 347, 430

4) Radloff, Aus Sibirien, I p 526 Finsch (West-Sibirien, p 150) speaks in the same way

5) Levchine, p 305

About the *Kara Kirghiz* we have got but little information. Radloff, in a short article on them, says: „In the regions of their winter-quarters (on the Issik-kol) they cultivate very large pieces of land, on which they leave behind labourers or slaves (of whom there are but few) whilst the tribe repairs *en masse* to the western mountains. These labourers get no wages, but a part of the produce in kind”¹). Although this receiving of a part of the produce is not incompatible with slavery, their being left behind without any supervision, and Radloff’s calling them labourers or slaves and in the latter sentence labourers only, makes us doubt whether these people are really slaves, the more so as in his book slavery among them is not mentioned²).

Koehne, in his article on *Kalmuck* law, referring to Pallas and Bergmann, asserts that the Kalmucks had slaves³). But the particulars he gives are not sufficient for us to decide, whether the so-called slaves were slaves proper or retainers of the chiefs; and if slaves, whether they were employed by the Kalmucks, or intended for sale abroad. Spencer refers to a statement of Pallas’ (but from which of his books does not appear), according to which slavery was inflicted as a punishment⁴); but whether the person so punished was kept as a slave among the Kalmucks or sold abroad, we are not told. The only book of Pallas’ to which we have access does not throw much light on the subject. „Adultery and fornication” says he „which are voluntarily [?] committed with female slaves . . . are liable to punishment”. In another place he states that the Torguts (a division of the Kalmucks) had much changed in physical appearance, probably by their intercourse with females captured abroad. As a punishment for some offences the culprit lost one or more of his children; but what was done with these children does not appear⁵). Nothing more

4) Spencer, Deser. Soc. V p. 16

5) Pallas, Reise, I pp. 264, 233, 265

definite on slavery is found in his detailed description of the the Kalmucks. In an article on the Kalmucks of the Black Irtysch Valley we read: „Horrible is the state of the unfortunate people who are reduced to slavery; they are bartered and sold like cattle”¹⁾. Here probably slaves intended for sale abroad are meant; for such horrible treatment of slaves is more common with slave-dealers than with those who employ slaves. Radloff has nothing on slavery; but his description of the Kalmucks is too short to draw any inference from²⁾. So we are left in doubt as to the existence of slavery, though we are inclined to think that it does not exist.

Much more fully than the Kalmucks proper Radloff describes the *Altaians* or *Altaiun Mountain-Kalmucks*. Slaves not being mentioned, and it being stated in many places that the menial work is done by servants and by the poor who are fed by the rich³⁾, it is certain that slavery does not exist. The word „slave” occurs in one place only, viz. in the mourning-song of the widow, who complains that „now she wears a leathern dress like base slaves; now she eats coarse food like slaves”⁴⁾. If we have not here to deal with an inaccurate translation, this mourning-song might be a reminiscence of formerly existing slavery. Slavery would then have disappeared spontaneously, not through Russian influence, for the Altaians have maintained their position in the mountain-valleys of the Southwest Altai, least accessible to Russian colonization. So we may safely consider the Altaians as a savage tribe keeping no slaves.

Radloff's notes on the *Teleuts*, *Tatars on the Kondoma* and *Abakan Tatars* are too short to draw any safe inference from⁵⁾.

Many Central Asiatic tribes have been described by Vambergy. The description of each of them fills many pages, but

1) Die Bewohner des schwarzen Irtyschthales, p 67

2) Radloff, Aus Sibirien, II pp 327—330

3) Radloff, I c I pp 270, 286, 287, 293, 295, 312, 315

5) Ibid., I pp 330—343, 353—357, 374—405

the information we get about social facts is very scanty. He seems to have made but little use of his literature, if we may judge from his paragraph on the Kazak Kirghiz, in which much more should have been derived from Levchine's valuable book. Therefore, though in most of his descriptions slavery is not mentioned, we may not infer that it does not exist. The positive cases have of course more value.

The *Usbegs*, according to Vambéry, till their land aided by Persian slaves ¹⁾. No more details being given, we may put this down as a positive case, though not a clear one.

The *Kara Kalpaks*, in the beginning of the last century, were given to slave-stealing ²⁾, whether for their own use or for sale does not appear.

The *Turkomans*, according to Vambéry, sell foreigners as slaves ³⁾. In another book the same author tells us that in their internal wars they made slaves, and he speaks of their keeping female slaves ⁴⁾. Stein and Weil make no mention of slavery ⁵⁾. According to Featherman „they are the intermediate agents for carrying on the slave-trade.” The land is tilled by a few men of the tribe „These agricultural labourers, poor and destitute as they are, are nevertheless exposed to the undue exactions of their tyrannical masters, and even the small pittance, which they may have laid up for themselves, is often fraudulently taken from them under the pretext of borrowing” ⁶⁾. Such a tribe, that captures slaves, but makes men of the tribe who are not slaves till their soil, is probably only the „intermediate agent” and not a slave-keeping tribe. Letourneau also, referring to Burnes, remarks: „The Persian captives are for the Turkomans a source of large profit; but the captors do not as a rule keep them for themselves, except sometimes the women, of whom they make concubines or wi-

5) Stein, *Weil*.

6) Featherman, *IV* p. 300

ves" ¹⁾ So we may safely infer that slavery does not exist here.

Featherman states that „formerly slavery existed among the *Tatars [of the Crimea]*, but it is now abolished. The nobility supported numerous attendants from mere ostentation and pride of rank" ²⁾. This short note is not however, sufficient for us to go upon.

The *Mongols* have hired herdsmen who tend their camels ³⁾. Whether they have any slaves does not appear.

Ujfalvy informs us that among the *Tadjiks of Hissar* slavery was recently abolished by an order from Bokhara ⁴⁾.

According to the same writer „all *Galtchas* are free; for slavery does not exist and has never existed in their inaccessible valleys" ⁵⁾.

The *Kurds of Erwan* probably have no slaves. They keep hired herdsmen. All members of the community, rich and poor, enjoy the same rights ⁶⁾.

Result Positive cases: Usbegs,
Tatars of the Crimea,
Tadjiks of Hissar.

Negative cases: *Kazak Kirghiz*,
Altaians,
Turkomans,
Galtchas,
Kara Kirghiz,
Kalmucks,
Mongols,
Kurds of Eriwan.

No conclusion: *Tuleuts*,
Tatars on the Kondoma,
Abakan Tatars,
Kara Kalpaks.

§ 12. *Siberia.*

Pallas in the last century visited many Siberian tribes; but most of his notes are too short to draw any inference from as to the existence of slavery.

Of the *Ostyaks* he gives a detailed account. They probably had no slaves; for it is stated that the chiefs, like the common people, had to live by their own labour¹⁾. But in Pallas' time they were already entirely under Russian control²⁾, so it is not certain that in their aboriginal state they had no slaves.

The *Samojedes* were not nearly so much under Russian influence. The details given by Pallas make it nearly certain that slavery did not exist. „Every Samojede keeps his reindeer and tends them himself with the help of his family, except the richest, who hire poor men as herdsmen”³⁾. Islawin and Finsch also make no mention of slavery⁴⁾. And the account of Samojede customs given by Von Stenin, who has largely drawn upon Russian literature, makes the non-existence of slavery quite certain⁵⁾.

„The *Ghiliaks*” says Déniker in a valuable article „are all equal, and never have there been slaves among them”⁶⁾.

Muller gives a somewhat minute description of the *Tunguz*, in which slavery is not mentioned, so it very probably does not exist⁷⁾.

The same author has some notes on the *Yakutes*. Though, here too, slavery is not likely to exist, the details given are not sufficient for us to arrive at any clear conclusion⁸⁾.

Steller's statements about slavery among the *Italmen* or *Kamtschadales* are not very clear. Speaking of their wars he

says: „The victorious party enslaved the prisoners, made the women and girls concubines, and slaughtered all males they could to be henceforward safe from them” In another place he states: „They do not steal anything from each other but women and dogs, which was the cause of their former wars.” In his survey of Kamtschadale history he speaks of a chief who, in order to augment his power, exacted from his enemies a tribute of girls and boys. The Italmen of the Kurile Islands attacked those of the Kamtschadale peninsula, and carried off many girls and boys into servitude. In a note he states. „The prisoners and slaves were employed in various rough and domestic labours . . . If a prisoner behaved well, he was sometimes dismissed to his home after a two or three years' imprisonment” ¹⁾. In his chapters on male and female labour and on marriage he makes no mention of slaves. In Steller's time Kamtschatka had already been brought under Russian control; so he could not any more observe their warfare and taking of prisoners, but got his information about these matters from hearsay. This probably is the reason why this information is not more clear. As he gives some particulars about slaves kept by the Italmen of the Kurile Islands, we may suppose that these at least had slaves. The author of the *Histoire de Kamtschatka*, who consulted Steller's manuscript, says: „The end of their wars was to take prisoners in order to make the men work and to take the women as concubines” ²⁾. But he adds no details.

The *Tuski* or *Tschuktschi* are to be divided into the inland Tuski, who keep reindeer, and the Tuski of the coast who are fishers. Nordenskiöld remarks: „According to some Russian authors there are slaves, undoubtedly descendants of war-captives, on the inland settlements. Amongst the natives of the coast, on the contrary, the most perfect equality prevails” ³⁾. A statement of Wrangell's, referred to by Erman, gives some more parti-

1) Steller, pp 356, 293, 235, 235 note

2) Hist. de Kamtschatka II p 156

3) Nordenskiöld, II p 124

culars. Wrangell, having lived already some time with the Tuski, perceived to his great amazement that there were serfs (*Leibeigenen*); he saw some families that did menial work; they had no property, and were not allowed to go away from the rich on whom they were dependent. They received clothing and lodging from their employers, and did the hardest work; for instance they ran by the side of the sledges to urge on the dogs. The Tuski said that this state of things had always existed. Wrangell supposes that these serfs were the offspring of war-captives. It does not appear what this supposition is founded upon¹⁾. This record is worth more than Nordenskiöld's vague reference to „some Russian authors.” But it is not easy to decide whether these subjected people are slaves. They might simply be poor men dependent on the rich without being slaves, such as are also found among the Eskimos. But the fact, that the poor Tuski are obliged to stay with their employers is more suggestive of slavery. Georgi however states that among the Tuski the poor serve the rich as herdsmen; and Dall, Hooper, and Kennan make no mention of slaves²⁾. In the *Histoire de Kamtschatka* it is stated that they made raids on the tribes subjected to Russia, „killing or taking prisoners all they meet”³⁾. But we are not told what was the fate of these captives. So we must leave this question undecided. At any rate this alleged slavery has been useful; for it led to Nordenskiöld's positive statement that among the Tuski of the coast, whom he had visited himself, slavery was unknown.

The *Koryakes* are to be divided into nomadic Koryakes and settled Koryakes. The former with their herds roam from one place to another, the latter live along the rivers. The languages of these two divisions differ so much, that they cannot understand each other. „The nomadic Koryakes consider them [the settled Koryakes] as slaves, and treat them accordingly”

1) Erman, pp 379, 380

2) Georgi as quoted by Hildebrand, *Recht und Sitte*, p 38, Dall Hooper, Kennan.

3) *Hist. de Kamtschatka*, II p 218

says our author. But we know that such slavery of a tribe as a whole is not slavery in the true sense of the word. No other mention is made of slaves. The nomadic Koryakes „before they were subjected by the Russians, had neither government nor magistrates; only the rich exercised some authority over the poor”¹⁾. So we may infer that slavery is unknown among both nomadic and settled Koryakes.

The *Ainu*, though not inhabiting Siberia, may find a place here, as they live nearer to this than to any other group. Batchelor, describing the raids which the several divisions of the *Ainu* made on each other, says: „On such occasions the whole of the male population were murdered during sleep, whilst the women and children were carried off as slaves to work in the gardens, and were called *usshui ne gurn*. The women however were kept as concubines”²⁾. Landor refers to this and some other remarks of Batchelor’s and then adds. „From my own experience — and I may add I am the only foreigner who has seen these Tokachi, or as others call them, Tokapchi *Ainu* — I came to a conclusion very different from this. I found that not only were they not cannibals, but that, taken altogether, they were the most peaceable, gentle, and kind *Ainu* I came across during my peregrinations through the land of the hairy people” „I have no wish to force my opinion on the public as the correct one. I do but describe what I have actually seen in a district in which others who have written on this subject have never set foot, and I leave it to my readers who has most claim to be heard”³⁾. Hitchcock also describes the *Ainu* as peaceable. Speaking of some cruel punishments in vogue amongst them, he remarks: „H. von Siebold has supposed from these old customs, that the *Ainos* were once a savage and warlike people. They may have been so, as one might infer from Japanese tradition, but it seems to me unsafe to make the assumption on the grounds

1) *Ibid*, pp 82, 223, 239

2) Batchelor, p 288.

3) *Savage Landor*, p. 59

suggested by von Siebold. Their present character does not sustain it in any way" ¹⁾). Lander gives another proof of Batchelor's untrustworthiness: the description by the latter of the Ainu of the Kurile Islands, whom he never visited, seems quite erroneous. „Before being so certain as to what he was stating," says Lander, „it would have been well, had the writer of the above lines visited the island in question. He would not then have committed so many blunders in so few lines" ²⁾). On the whole most writers on the Ainu do not seem to have seen much of them. „The Ainu of this bay [Volcano Bay] are poor specimens of their race, as most of them have intermarried with Japanese. They are, however, those most talked about by Europeans, for they are of easy access to globe-trotters. They are mostly half-castes, and even second and third crosses; wherefore it is no wonder that the incautious travellers who have written on the Ainu, studying only these easily-visited specimens, have discovered in them a remarkable likeness to the Japanese" ³⁾). Some other describers of the Ainu we have consulted make no mention at all of slaves ⁴⁾). Further evidence of Batchelor's untrustworthiness is given by the fact that, whereas he asserts that they make slaves to work in the gardens, several authors inform us that they subsist on fishing and do not till the soil. Lander says: „(The inhabitants of Piratori) cannot be taken as fair specimens of their race, for they have adopted several customs and habits of the Japanese, which the incautious traveller has then reported as purely Ainu customs. For instance, the pure Ainu diet consists almost entirely of fish, meat and seaweeds. Only occasionally are the roots of certain trees eaten. At Piratori I found that many grow and eat millet, and corn and bad rice are also sometimes procured from the Japanese" ⁵⁾). This is affirmed by

5) Savage Lander, p. 24

St. John and Von Schrenck ¹⁾. We have dwelt rather long on this subject; but the importance of the case justifies it; for Batchelor's description of those raids, with so many particulars and the native name of the slaves added to it, seems at first sight sufficiently trustworthy. Yet we believe that the authorities we have referred to may be considered sufficient for us to reject his whole statement, native name and all, and to conclude that the Ainu have no slaves.

Result Positive case: *Kamtschadales*

Negative cases: *Samojedes*,
Ghiliaks,
Tunguz,
Tuski of the coast,
nomadic koryakes,
settled koryakes,
Amu,
Ostyaks,
Yakutes.

No conclusion inland *Tuski*.

§ 13. *Caucasus*.

Slavery undoubtedly exists among the *Ossetes* ²⁾ and *Circassians* ³⁾.

The *Shahsewenses*, according to Radde, consist of two social classes, the nobles and the common people ⁴⁾. So they probably have no slaves.

According to Bodensiedt „every *Suane* who is not able to

1) St. John I c p 218, Schrenck III pp 452 455 Hitchcock (p 457) states that „millet is cultivated here and there ' If „here and there' means in the places where there is much intercourse with the Japanese this agrees with Lindor's observations

2) Morgan, *Ossetes* pp 374, 377 408, Klaproth, II pp 595 615, Pallas *Neue Nord Asien* VII p 69 Kovalewsky *Coutume contemp* pp 78 189, 196, 203, 347

4) Radde, pp 425, 426

provide for his daughters and sisters, may sell them as slaves" ¹⁾. This is the only reference made to slavery by any of our ethnographers ²⁾ Telfer states that the independent Suanes acknowledge neither king nor nobility, consider all men equal, despise all authority and have no laws ³⁾. Therefore it does not seem probable that they keep slaves; perhaps the daughters and sisters of whom Bodenstedt speaks are sold abroad.

In Klaproth's detailed description of the *Charatschai* no mention is made of slavery; so probably it does not exist ⁴⁾.

Chantre gives a few short notes on some Caucasus tribes.

Gourien nobles, according to him, export slaves to Turkey ⁵⁾. Whether they also employ slaves, we do not know.

Among the *Kabards* of Asia Minor the families consist of about twelve persons, slaves included ⁶⁾.

The *Abchases* were formerly slave-traders. They coupled their prisoners, and sold the children born of these unions ⁷⁾. Whether these slave-breeders kept their slaves only for the sake of reproduction or for anything beyond this, does not appear.

The *Tchetchenes* „say: We are all equal. There were never slaves among them. Only the captives were not members of the tribe; but even these often married their masters' daughters and so became their equals" ⁸⁾. These captives bear a strong resemblance to slaves; and we should be very much inclined to call them such. were it not that Chantre positively asserts that there never were slaves among this tribe The lack of further details prevents our coming to any definite conclusion.

Abchases.

§ 14. *Arabia.*

The *Aeneze Bedouins* have slaves. „Slaves, both male and female, are numerous throughout the desert; there are but few sheiks or wealthy individuals who do not possess a couple of them”¹⁾.

Doughty makes no mention of slavery among the *Fejir Bedouins*; but his description is not elaborate enough for us to infer that slavery does not exist²⁾.

The *Larbas*, a tribe of pastoral Arabs living in North Africa, have been beautifully described by Geoffroy. They keep Negro slaves³⁾.

- Result.* Positive cases. *Aeneze Bedouins*,
Larbas.

No conclusion: *Fejir Bedouins*.

§ 15. *Africa. A. Bantu tribes.*

Theal remarks about the *Bantu tribes in general* that, when first discovered by the Portuguese, the coast tribes had no slaves, but in the inland there were heartless slave-owners⁴⁾.

1) Burokhardt, I p 356, see also pp. 158, 175

2) Doughty.

3) Geoffroy, p 428

4) Theal, p. 72.

1. Kaffirs.

Tromp and Macdonald, describing the *Kaffirs in general*, make no mention of slavery ¹⁾. Waitz remarks: „The poor join the rich as their „children“, live in servitude, and are often exposed to heavy oppression and arbitrary treatment; but they are not slaves in the true sense slavery proper does not exist.” „The conquered are not enslaved, the conqueror requires only subjection; whereas often the object of their wars is the capturing of cattle rather than of men” ²⁾.

The *Ama-Xosa* are described by Fritsch. War is seldom bloody, its main object being cattle-stealing; but if the attacked defend their cattle energetically, a general slaughter ensues; women and children are killed without discrimination. Fugitive enemies are mercilessly slaughtered. When a chief has great renown, he gets many followers, who crowd towards him from all sides and contribute to the enlargement of his power; for it is a custom among the Kaffirs never to deliver up a fugitive whatever the reason of his fleeing from his native country. The chiefs punish insurgents by taking away their cattle; then they are poor men without any influence in the tribe. These particulars make the existence of slavery improbable. no prisoners are taken, fugitives and insurgents are not enslaved. In one place, however, he speaks of slaves. The Fengu, remnants of destroyed tribes, fell into the hands of the Ama-Xosa, who spared the lives of these fugitives, but kept them in wretched bondage. „In 1835, after this slave-state had lasted for more than ten years, when the Kaffirs were at war with the colony, the Fengu begged the Governor Sir Benjamin d'Urban to liberate them. The Governor, complying with the request, sent troops to enable them to depart, and so at once 16800 men, women and children with what little cattle and other property they had, established themselves in the colony” ³⁾.

1) Tromp, De Kaffers, Macdonald, South African tribes

2) Waitz-Gerland, II, pp 391, 398.

3) Fritsch, pp 79, 80, 93, 97, 147.

It is clear that these Fengu were not slaves. That they could depart in such large numbers from the country of the Ama-Xosa, proves that they lived more or less separate. They were weaker tribes subjected by a stronger one; we shall see that this occurs very often in South Africa. The tribes were subjected as tribes, not the individuals as such; therefore they were not slaves. We may safely infer that slavery does not exist among the Ama-Xosa.

In his description of the *Ama-Zulu* Fritsch makes no mention of slavery. Livingstone says. „Zulus do not usually destroy any save the old, and able-bodied men. The object of their raids in general is that the captured women and children may be embodied into the tribe, and become Zulus. The masters of the captives are kind to them, and children are put on the same level as those of any ordinary man. In their usual plan, we seem to have the condition so bepraised by some advocates for slavery. The members of small disunited communities are taken under a powerful government, obtain kind masters, whom they are allowed to exchange for any one else within the tribe, and their children become freemen. . . . The Zulus are said never to sell their captives”¹⁾. These captives who are „embodied into the tribe, and become Zulus,” and are never sold, certainly are not slaves.

The *Matabele* are a division of the Zulus, who in 1820 separated from the mother-country. Their mode of life still bears much resemblance to that of the Zulus²⁾. Livingstone remarks: „Among the coast tribes a fugitive is almost always sold, but here [i. e. among the Zulus] a man retains the same rank he held in his own tribe. The children of captives even have the same privileges as the children of their captors. The Rev. T. M. Thomas, a missionary now living with Moselekatse, finds the same system prevailing among his Zulu or Matabele. He says that „the African slave, brought by a foray to the tribe, enjoys, from the beginning, the privileges

1) Livingstone, *Zambesi*, pp. 385, 386

2) Fritsch, pp. 145, 146

and name of a child and looks upon his master and mistress in every respect as his new parents. He is not only nearly his master's equal, but he may, with impunity, leave his master and go wherever he likes within the boundary of the kingdom: although a bondman or servant, his position, especially in Moselekatse's country, does not convey the true idea of a state of slavery; for, by care and diligence, he may soon become a master himself, and even more rich and powerful than he who led him captive.' The practice pursued by these people, on returning from a foray, of selling the captives to each other for corn or cattle, might lead one to imagine, that slavery existed in all its intensity among the native Africans; but Mr. Thomas, observing, as we have often done, the actual working of the system, says very truly „Neither the punctuality, quickness, thoroughness, nor amount of exertion is required by the African as by the European master. In Europe the difficulty is want of time, in Africa, what is to be done with it. Apart from the shocking waste of life, which takes place in these and all slave forays, their slavery is not so repulsive as it always becomes in European hands”¹⁾ Kerr states, that the masters must pay for the offences committed by their slaves²⁾. Holub's account throws quite another light on the subject. The captured boys are given to warriors in order to be instructed by them in warfare; those already accustomed to the use of weapons are instantly enrolled into the army. Female captives are lent to warriors. The king used yearly to make raids on the neighbouring countries; on these occasions thousands were slaughtered. Besides the men old women no longer able to work, infants and young children were killed. When Mackenzie in 1863 visited Matabeleland, he found but a few Zulu-warriors. Most men in the prime of life were Betchuanas, whom the king had either captured or exacted as a tax. The regiments of young men consisted mainly of Makalaka and Mashona youths. In time of

1) Livingstone, Zambesi, pp 262, 263

2) Kerr I, p 20

peace they had to tend the cattle, and on their return home to exercise themselves in the use of weapons ¹⁾). Can these statements be brought to agree? It may be, that Holub's account relates to a period of strong but short-lived despotism, such as so often occurs among these tribes, and Livingstone's description to a more peaceful time. It may also be, that both relate to the same period, Livingstone not mentioning their military organization. Though Thomas (quoted by Livingstone) speaks of slaves, it is not easy to make out, whether the captives were really slaves, we should rather think not, as they might leave their masters and go wherever they liked. At any rate slavery, if it exists, is not much developed, the chief function of slaves probably being reinforcement of the tribe in warfare.

In his description of the *Betchuanas* Fritsch makes no mention of slaves. According to Holub, however, they have Makalahiri slaves ²⁾). But from some particulars it appears that these Makalahiri are rather a tribe subjected as a whole than individual slaves. „These Makalahiri have to live in the more western parts, where game is plentiful, and have to kill the game and bring the spoil to their masters, who live in parts where the water is more abundant.” They are employed as hunters or herdsmen. „If a Makalahiri servant behaves well and kills a good many ostriches for his master, he is allowed to marry a Betschuana woman” ³⁾). Conder describes the Makalahiri as „nomadic hunters, living chiefly in the west, and considered in the light of serfs of the chief” ⁴⁾). It is clear that these hunters, living away from the Betchuanas, and considered as „serfs of the chiefs” are a subjected tribe and not individual slaves. There are two other tribes subjected to the Betchuanas: the Barwa or Masarwa, and the Madenassana. That these are servile tribes and not slaves, appears still more

3) Holub in J. A. I 1881, p 10

4) Conder, p. 89.

clearly than with the Makalahiri¹⁾. The inference is, that the Betchuanas have no slaves.

The Makololo and Bakwains are considered by Schurtz as divisions of the Betchuanas²⁾. But as we have got separate descriptions of them we shall treat them here separately.

Livingstone tells us that the *Makololo* never make slaves³⁾. In another work he relates, how once a troop of Matabele was starving on an island; the Makololo finding them killed the adult people and adopted the rest. Formerly there was no slave-trade; now captured children are the object of it⁴⁾. The Makololo therefore have no slaves.

As to the *Bakwains* Livingstone speaks of a woman who as a punishment for theft, became the property of the injured party⁵⁾. But we do not know, whether she was intended to be sold abroad or to be kept as a slave. Holub speaks of Barwa and Makalahiri in a servile condition; but these are probably subjected tribes and not slaves⁶⁾.

Joest informs us that among the *Barolong* there are descendants of slaves, though not treated as such, who live with most of their families. They tend the cattle; their name „Ba-khalahari“ vouches for their western origin⁷⁾. Perhaps they are a division of the same Makalahiri we have met with as a tribe subjected to the Betchuanas. But the statement, that they live with Barolong families is more suggestive of slavery; they may, however, be free labourers. We cannot arrive here at any definite conclusion.

The *Angoni* are great slave-traders, but keep also domestic slaves. Kerr gives some particulars regarding their slave-system⁸⁾.

5) Ibid., p. 235

6) Holub, Süd Afrika I, p. 397

7) Joest, Weltfahrten, I p. 253

8) Kerr, II p. 129

Among the *Vawenda* the children of sorcerers are sold as slaves; whether at home or abroad we are not told ¹⁾. No more particulars being given, we do not know whether slavery exists here.

Theal, describing the *Makalanga* or *Makaranga*, tells us of a chief who offered female slaves to the whites ²⁾. But this short note is by no means sufficient for us to go upon.

2. South - West Bantus.

The *Ovaherero* or *Damaras*, according to Andersson, have slaves. The men are lazy; all their work is done by women and slaves. The slaves are the offspring of impoverished families, and captured Bushmen. The former are enslaved when children and mainly employed as herdsmen ³⁾. It is strange that Fritsch, who often refers to Andersson, makes no mention whatever of slavery. If he believes that the *Ovaherero* have no slaves, he should have stated that Andersson is wrong. Hahn and Haarhoff also have nothing on slavery ⁴⁾, which is very puzzling, as according to Andersson slavery holds so large a place in their social life. Probably the children of impoverished families whom Andersson speaks of are not slaves but free labourers compelled to serve only by poverty; for „among all South-African natives the rich oppress the poor, who in the hope of filling their stomachs, submit to a state of dependence that is not authorized by law” ⁵⁾. The only slaves would then be a few captured Bushmen, though the existence even of these slaves is rendered uncertain by the other authors not mentioning them.

Galton speaks of Negroes employed by Hottentots and *Damaras*; the master sometimes gives away Negroes to his friends. This is rather suggestive of slavery. But it is added that the

5) Fritsch, p. 364, see also Waitz-Gerland, II, p. 391.

Negro „complies with the transaction, as he wants a master and does not know how to live without one”¹⁾). So these Negroes are perhaps servants rather than slaves. As this statement too does not throw much light on the subject, we cannot arrive at any definite conclusion.

Among the *Batoka* the slave-trade had in Livingstone's time been lately introduced²⁾). We are not told whether they kept slaves themselves.

The *Barotse* have slaves; this is proved by the statements of several writers³⁾).

In the descriptions of the *Makulaka* no mention is made of slavery, so they probably have no slaves⁴⁾).

The *Manansa* are not fond of fighting⁵⁾), so they probably make no prisoners. They might have purchased slaves; but as nothing is told us of slavery amongst them, the probability is against this.

The *Kimbunda* have an elaborate slave-system, minutely described by Magyar⁶⁾).

The *Lovalé people* have the reputation of being harsh task-masters. Slaves are one of the articles they get by exchange from abroad⁷⁾). These short notes are all the evidence we know of, bearing on the existence of slavery among them,

The people of *Lunda* are great slave-traders. Several details given by our informants prove that they also keep slaves for their own use⁸⁾).

In the neighbouring country of *Cazembe* there are two social classes: the nobility and the Muzias or servants, including peasants, artisans, etc. Both classes are called slaves of the

8) Pogge, *Muata Jamwo*, pp 165, 134, 226, etc, Livingstone, *Last Journ* I p 237,

Muata (king); this of course is not slavery proper. All men able to fight must go to war; but this does not affect the cultivation of the land, which is carried on by the women only ¹⁾. These statements make the existence of slavery improbable.

Among the *Kioko* slavery certainly exists ²⁾.

The *Selles*, according to Magyar, have also slaves ³⁾.

3. East-African Bantus.

Macdonald remarks that the *East-Central African tribes in general* have slaves ⁴⁾.

The *Manganya* suffer much from slave-stealing tribes, but also keep slaves themselves ⁵⁾.

Slavery also exists among the *Banyai* ⁶⁾, *Wanyamwesi* ⁷⁾, *Azimba* ⁸⁾, and *Wapi* ⁹⁾.

The *Bahsa* sometimes sell their own wives and daughters as slaves. They are „dependants of the Babemba; reduced by their own slaving habits to a miserable jingly state” ¹⁰⁾. Being themselves in such a subjected state, it is not probable that they have slaves.

The *Hazaramo* have no weapons of war; warfare seems unknown among them. They formerly suffered much from the slave-trade ¹¹⁾. We do not know, whether they have slaves; probably they have not.

Peters, in his account of the *Maravis*, gives some particulars about slaves; but they are not sufficient to decide, whether there is domestic slavery or slave-trade only ¹²⁾.

11) Thomson, Contr Afr. Lakes, I pp. 102, 139

12) Peters, pp. 284, 285.

The *Wasinja* and *Wakerewe* export slaves; but slaves are also imported into their country by caravans ¹⁾. Probably the latter are kept among them; but this short note is not sufficient to draw a positive inference from.

The *Wafipa* are said never to make slaves or to sell them to traders. When a slave succeeds in arriving at the town of Kapufi, he is considered free. They never make war, though they defend themselves when attacked ²⁾.

Among the *Wanyaturu* slavery is unknown ³⁾.

Von Hohnel, visiting the country of the *Wakikuyu*, found two men, who some years before had joined a caravan and had been left behind because they were ill, from that time they had lived as slaves among the *Wakikuyu* ⁴⁾ This statement shows, that the *Wakikuyu* keep slaves for their own use, not for export only.

Slavery is also carried on by the *Bondia*. Dale gives several details ⁵⁾.

Of the *Hawira* we have a detailed description by Emin Pasha. As there is not a word about slaves in it, it is almost certain that slavery does not exist among them ⁶⁾.

Slavery is also very probably not to be found among the *Wataweta*, minutely described by Thomson, Johnston and Von Hohnel ⁷⁾.

4. Tribes on the Congo and in Lower Guinea.

Ward and De Bas, speaking of the *Congo tribes in general*, state that slavery exists ⁸⁾.

On the *Lower Congo*, according to Phillips, the family

consists of „the head man or patriarch, his wives, family proper, dependents and slaves.” There are also debtor-slaves ¹⁾).

Slavery certainly exists among the *Bihés* ²⁾, *Minungo* ³⁾, *Mpongwe* ⁴⁾, *Orungu* ⁵⁾, *Mbengas* ⁶⁾, *Apinchi* ⁷⁾, *Duallas* ⁸⁾, *Fio-tes* ⁹⁾, *Bayanzi* ¹⁰⁾, *Bangala on the Congo* ¹¹⁾, *Baluba* ¹²⁾, *Man-yuema* ¹³⁾, *Kabinda* ¹⁴⁾, *Ininga and Galloa* ¹⁵⁾, *Hangata* ¹⁶⁾, *Bondo* ¹⁷⁾, *Camas* ¹⁸⁾

The describers of the *Mundombe* make no mention of slavery; so they probably have no slaves ¹⁹⁾).

The writers on the *Quillengue* also are silent on this subject; but here the descriptions are not minute enough for us to arrive at any accurate conclusion ²⁰⁾).

The natives of *Angola* have slaves; whether for export only or also for their own use, does not appear ⁻¹⁾).

The same applies to the *Bangala on the Kuango*, who are great slave-traders ²²⁾).

The *Songo* or *Masongo* use slaves as articles of exchange, and wherever the chief goes, he is accompanied by slaves; but whether they can rightly be called a slave-keeping people, is not clear from Pogge's short notes ¹⁾).

Several authors inform us that the *Fans* have no slaves ²⁾).

Buchholz, in a short note, speaks of slavery among the *Bakele* ³⁾).

The slave-trade is almost the only trade of the *Okota*. On the death of a distinguished person slaves are killed ⁴⁾). This information is not, however, sufficient to put this case down as a clear one.

None of our authors on the *Bateke* make any mention of slavery. According to Guiral they sometimes eat their prisoners, when they find no occasion to sell them ⁵⁾). So they probably keep no slaves.

The *Wagenia* are stated to throw the corpses of slaves, and perhaps of all the dead, into the river ⁶⁾). This short note being the only evidence, we are not certain that slavery really exists.

Among the *Warua* at the funeral of a chief slaves are killed ⁷⁾). But this does not prove that slavery is a social institution here.

The *Bakuba* have slaves, according to Wissmann ⁸⁾). But the same author states in another place, that male slaves are bought only to be killed at funerals ⁹⁾). So slavery proper probably does not exist.

When Wissmann visited the *Tuchilangue*, they had no male

9) Wissmann, Zweite Durchquerung, p. 115.

slaves; but on a later visit he found that male slaves had been introduced among them. Pogge also observed male slaves ¹⁾. So at present slavery exists here.

Of the *Tupende* we are told, that slaves have for two hundred years been exported from their country. They buy female slaves, and make them their wives ²⁾. Probably they keep no male slaves; but it is not certain.

The *Aduma* and *Oschebo* are slave-traders; but of domestic slavery no mention is made ³⁾.

The same applies to the *Hollo* ⁴⁾ and *Milembue* ⁵⁾

5. Natives of the Wahuma states.

Among the *Waganda* slavery is carried on to a great extent ⁶⁾

The describers of the *Wanyoro* ⁷⁾ make no mention of slavery; but their notes are not detailed enough to infer that it does not exist.

5) Ellis, *Ewe-speaking peoples*, pp. 218—221.

these especially the *Ewe*¹⁾ and the *inhabitants of Dahomey*²⁾), *Geges and Nagos* of Porto-Novo³⁾), *Yoruba-speaking peoples*⁴⁾ (especially the *Yorubas*⁵⁾), *Tshi-speaking peoples* of the Gold Coast⁶⁾ (and amongst these especially the *inhabitants of Ashanti*⁷⁾), *Fanti*⁸⁾, *Liberia-tribes*⁹⁾. (and amongst these especially the *Croos*¹⁰⁾, *Gallinas*¹¹⁾ and *Mandingos*¹²⁾), *Wolofs*¹³⁾, *Saracolays*¹⁴⁾, *Bambaras*¹⁵⁾ and *Toucouleurs or Torodos*¹⁶⁾).

„The Bobo” says Tautain, „make no slaves; they hold slavery greatly in abhorrence It seems that the Bobo are very industrious; as they have no slaves, they probably have to work much harder than the Mandingos and other neighbouring peoples”¹⁷⁾

Corre informs us that „slavery exists among the *Sereres*. However, the inhabitants of Fadiouth are said to have had captives during the last few years only, imitating what they saw amongst the Wolof traders, most of whom are subjects of France. Independent persons, such as a woman without a husband or family, may sell themselves to any one who is willing to buy them”¹⁸⁾. This case may well be called a dubious one.

2. Haussa states.

The notes we have been able to collect relate to one people only of this group, viz. the *Haussa*. Staudinger's account clearly proves that they have slaves ¹⁾

3. Central Soudan.

We have not been able to collect many notes on the *Negro* tribes of the Central Soudan; moreover some tribes had to be excluded, as they could not properly be called *savages*.

The *Borgu* certainly have slaves ²⁾.

Lander relates that a former king of *Atta* had 500 domestic slaves ³⁾. This being the only information, we cannot arrive at a clear conclusion.

4. Upper Nile.

Chaillé Long tells us that among the *Chillooks* the sheikh of each tribe detains as slaves those who do not possess at least one cow ⁴⁾. No more particulars being given about slavery, we may put this down as a very dubious case.

The *Diour* tribes make raids on each other. A large number of slaves are carried off every year by the Arabian slave-traders ⁵⁾. Whether domestic slavery exists or not, we are not told.

Among the *Dinka* every man has on an average three head of cattle, but there are also poor people, who are the slaves or servants of the rich ⁶⁾. These „slaves or servants” very probably are not slaves. We may not, however, infer hence that slavery does not exist here; for the notes our authors ⁷⁾ give on their social life are very short.

1) Staudinger, pp 570 574

2) Lander, II pp 128, 129, 198

3) Lander, III p. 115

4) Chaillé Long, p 29

5) Wilson and Felkin, II pp 163, 162

6) Schweinfurth, I p. 164.

7) Schweinfurth, Junker

The *Bari* are themselves victims of the slave trade¹⁾. Whether they keep slaves, we are not told.

Very minute descriptions are given in Stuhlmann's book of the *Latuka*²⁾, *Alur*³⁾ and *Lendu*⁴⁾. No mention being made of slavery, we may be sure that it does not exist among them.

Junker speaks of a chief of the *Abukaja* or *Amadi*, who made raids and divided the booty, consisting of captured women and girls, with the allied chiefs and his subjects. Such is the custom, says Junker, and therefore the men like to go to war. In another place he speaks of captured women with children and infants, and girls⁵⁾. Whether these captured persons are kept among the *Abukaja* or exported, and if the former, whether they are made slaves, we do not know.

The same author speaks of slaves among the *Makaraka*; but it is not clear, whether they keep these slaves or sell them to the Arabians, who carry on the slave-trade on a large scale in these regions⁶⁾.

The *Niam-Niam* in their wars capture many women. Schweinfurth supposes, that they retain the captured women as slaves, but kill the men. Junker also speaks of female slaves. According to him male slaves are sometimes sacrificed; but it is not clear, whether the latter are ordinary slaves or only bought or captured to be sacrificed⁷⁾. Our information does not admit of any accurate conclusion.

Schweinfurth's description seems to show, that the *Mombuttus* have male slaves. Junker speaks only of female slaves⁸⁾. Our information is rather scanty.

Burrow's notes on the *Niam-Niam* and *Mombuttus* do not throw much light on the subject.

1) Junker, I p. 531, Wilson and Felkin, II p. 96

2) Stuhlmann, pp. 774 sqq. (by Emin Pascha)

3) Stuhlmann, pp. 492—529

4) *Ibid.*, pp. 530 sqq.

5) Junker, II pp. 477, 462.

6) Junker, I pp. 331, 411, 428.

7) Schweinfurth, II pp. 164, 190, Junker, III pp. 4, 292.

8) Schweinfurth, II pp. 45, 82, Junker, II pp. 265, 263, 317, III p. 123.

The *Wagungo* proper, says Junker, do hardly any work themselves; they leave it all to their slaves, the Schuli and Tschappu ¹⁾. These Schuli and Tschappu seem to be subjected tribes rather than slaves; but as further particulars are wanting, we feel unable to decide.

Among the *Warundi* slavery is unknown ²⁾.

The same applies to the *Wafomi* ³⁾, *Wataturu* ⁴⁾, and *Wambugwe* ⁵⁾. Johnston's account of the *Wachaga* shows, that they also have no slaves ⁶⁾.

The several describers of the *Bongos*, who give many details of their social life, make no mention of slavery; hence we may infer that it does not exist among them ⁷⁾.

5. Appendix. African Islands.

The *Boobies* of Fernando-Po, according to Compiègne, have numerous slaves. Hutchinson states, that in their wars they spare neither age nor sex ⁸⁾. So the slaves are probably purchased foreigners.

Sibree, describing of the *Sakalavas* of Madagascar, speaks of a kind of temple, which slaves may not enter, for should they do so they would become free ⁹⁾. According to Hildebrandt the occupations of the *Sakalavas* are not multifarious. The men tend the cattle and now and then sell a beast, and sometimes help the women in the little plantations. In the rice district of North Sakalavaland, where rice is cultivated for export, there is more labour on the fields to be done; therefore in this district many slaves are kept ¹⁰⁾. It is not clear, whether our

§ 17. *Africa C. Light-coloured South Africans and African pigmy-tribes.*

Fritsch, at the beginning of his description of the *Hottentots* or *Koi-Koin*, states that in his time these tribes had already been much changed from their aboriginal state; so he had to rely on the statements of ancient writers, several of which bear a rather fantastic character¹⁾

Of the *Namaqua* he says, that the state of women is not so bad as among most South African tribes. The men assist their wives in the hard work; moreover a class of servants or slaves exists here. „This lowest class of people — one might object to our calling them „slaves”, as there is no established law distinguishing slaves from freemen — among the Namaqua mainly consists of individuals belonging to the despised tribes of Mountain-Damara and Bushmen. These people are looked upon as inferior by their very birth, and (like the *Vaalpenz* among the Betchuanas) regard bad treatment as inevitably connected with their origin, without being slaves by law. Serfs (*Leibeigenen*) in the proper sense of the word may be defined as those only who, as prisoners of war, or by surrendering at discretion (like the *Fingu* among the Kaffirs) become subjected to mightier persons; of these there

1) Fritsch, p. 261.

are but few among the Namaqua tribes, but among all South African natives the rich tyrannize over the poor who, in the hope of filling their stomachs, comply with a state of dependence which is not authorized by law." According to Th. Hahn he who ill-treats or even barbarously murders a slave, is not punished¹⁾. This statement is not very clear. Fritsch speaks here of three kinds of „servants or slaves”: *a.* poor dependent on the rich; these certainly are servants and not slaves; *b.* individuals belonging to despised tribes; of these Fritsch says, that they are not slaves by law, and as no more details are given, we cannot make out what they are; *c.* prisoners of war and those who have surrendered at discretion. These, according to Fritsch, are the only *Leibeigenen* in the proper sense; but he compares them to the Fingu, who, as we saw in § 15, are subjected tribes rather than slaves. Galton's above-quoted statement about Negroes among the Hottentots and Damaras being „given away” by their masters, also throws but little light on the subject²⁾. So we cannot here arrive at any definite conclusion.

In his description of the *Griqua*, *Korana*, and *Colonial Hottentots* Fritsch makes no mention of slavery. Holub remarks: „Where a well-to-do *Korana* can afford to keep some Makalahiri and Masarwa as servants and slaves, the soil is tilled to a small extent”³⁾. We have before met with these Makalahiri and Masarwa as tribes subjected to the Betchuanas; this makes us doubt, whether the „slaves” Holub speaks of are not divisions of the same tribes subjected to the Korana, rather than slaves in the proper sense; the more so as he speaks of „servants and slaves.”

There is no evidence therefore of slavery existing among the Hottentots. Yet, bearing in mind Fritsch's above-quoted warning and Galton's dubious statement, we must conclude, that its non-existence is far from certain.

1) Fritsch, p 364,

2) See above, pp 145, 146.

3) Holub, Sud-Afrika, I p 112.

The describers of the *Bushmen* ¹⁾ make no mention of slavery. Fritsch tells us that they adopted parts of the declining Hottentots into their hordes ²⁾, so we may safely infer that slavery did not exist among them.

None of the describers of the *Akkas* ³⁾ make any mention of slavery. Burrows tells us that they „purchase their implements, such as spears, arrow-heads, and knives, from their neighbours, in exchange for dried meat, or for captives they have taken in the bush.” But as the same writer states that „each village is ruled by a chief or head man, but among the people there is no variation of rank” ⁴⁾, we may safely suppose that they sell abroad all captives they have made, and do not keep any of them as slaves.

Of the *Abongos* we know little, far too little to make out whether slavery exists among them ⁵⁾.

The *Mucassequere*, according to Serpa Pinto, sell the captives they make in their wars as slaves to the Ambuelia, who transmit them to Bihé caravans ⁶⁾. We may therefore suppose that they do not keep slaves.

Result. Negative cases: *Bushmen*,

Akkas,

Mucassequere.

No conclusion *Namaqua*

Griqua,

tribes, all of which practise slavery: *Beduan*¹⁾, *Takue*²⁾, *Marea*³⁾, *Beni Amer*⁴⁾, *Barea and Kunama*⁵⁾, *Bogos*⁶⁾.

The *Gallas* practise slavery to a great extent⁷⁾.

The *Somal* and *Danakil* also have slaves, though not so many as the *Gallas*⁸⁾.

Amongst the *Massai* slavery is unknown⁹⁾.

The *Wandorobo* have been described by several authors¹⁰⁾. Nowhere is any mention made of slaves. They are themselves subjected to the *Massai*¹¹⁾. We may safely conclude that they have no slaves.

The *Wakwafi* also probably have no slaves; for none of their describers¹²⁾ say a word about slavery.

The *Fulbe* or *Fulah* certainly have slaves¹³⁾.

Among the *Moors of Senegambia* also slavery certainly exists¹⁴⁾.

Duveyrier's book on the *Tuareg* was not accessible to us; but Letourneau, referring to Duveyrier, gives many particulars which sufficiently prove that the *Tuareg* keep slaves¹⁵⁾.

Several North-African peoples, being semi-civilized rather than savages, have been excluded here, the *Kabyls* among others.

What Letourneau says about the *Kabyls* affords a curious instance of the manner in which he treats his subject. From the fact that the creditor has a right of imprisonment, he concludes, that there were formerly debtor-slaves. But he makes no mention at all of the passage, in which his authorities explicitly state that the *Kabyls* had Negro-slaves, until their country was conquered by the French¹⁾.

§ 19. *Recapitulation*

In the preceding paragraphs we have tried to find, which savage tribes have, and which have not, slaves. But we suppose that our enumeration of positive and negative cases has not yet given the reader a clear idea of the occurrence of slavery in the several geographical districts; probably he does not see the wood for trees. So we shall take here a short survey, serving, so to speak, as a map and showing in which parts of the globe slave-keeping savage tribes are found.

1) Letourneau, p. 255, Hanoteau et Letourneux, II p. 143

In *North America* slavery exists along the Pacific Coast from Behring Strait to the Northern boundary of California (15 clear positive cases). Beyond this district it seems to be unknown (42 clear negative cases).

In *Central and South America* we find 9 positive and 18 negative cases¹⁾. The positive cases are scattered over the whole continent; there are no large positive or negative districts. Such, at least, is the result we arrive at with the aid of our rather incomplete literature; a better literature would perhaps show that such districts exist.

In *Australia* slavery is unknown (23 negative cases).

In *Oceania*, i. e. Melanesia, Polynesia and Micronesia, slaves are only to be found in Tahiti, New Zealand, and the Western part of New Guinea (altogether 7 pos. cases). In the rest of this group (except a few dubious cases) slavery does not exist (23 neg. cases).

In the *Malay Archipelago* slavery very frequently occurs (62 pos. cases). The 7 negative cases are scattered over the group.

India and the *Indo-Chinese Peninsula*, taken together, afford 12 positive and 11 negative cases, the former being found in the Northern parts of both groups.

In *Central Asia* and *Siberia* slavery seems to be unknown, except among the Kamtschadales (in Central Asia 4 neg. cases, in Siberia 1 pos. case and 7 neg. cases).

The *Caucasus* yields 3 positive cases, 1 negative case, and several dubious cases. Our literature on this group is rather scanty.

The *Arabian Aeneze Bedouins*, as well as the Arabian Larbas who live in North Africa, keep slaves (2 positive and no negative cases).

As for *Africa*, the Northern part of this continent, being inhabited by semi-civilized peoples, is excluded from our survey. Among the savage Africans slavery very frequently oc-

¹⁾ In this paragraph we speak of „positive” and „negative cases”, meaning only the clear cases.

curs. There are only two districts, in which no clear positive cases are found, viz. South Africa to the South of the Zambesi, and the country about the Upper Nile, to the South-West of Abyssinia. Large agglomerations of slave-keeping tribes are found on the Coast of Guinea, and in the district formed by Lower Guinea and the territories bordering the Congo. A few negative cases, however, are interspersed among the members of both groups, especially of the latter. There are altogether 65 pos. and 28 neg. cases in Africa.

PART II. — THEORETICAL.

CHAPTER I — METHOD AND DIVISIONS

§ 1. *Method.*

The results of the first Part will be utilized in this. We have seen that slavery exists or formerly existed among many savage tribes, whereas many others have always, as far as we know, been unacquainted with it. The present Part will be taken up with an inquiry into the causes of these phenomena. We shall try to find out, what kinds of tribes have slaves, and what kinds have not.

To this end it would seem best to divide the several tribes according to their general culture, and then to inquire at which stages of culture slavery is found. But such a division cannot be made here incidentally; for it would require years of labour. And a good division, that we could adopt, has not yet been made. Morgan distinguishes three periods of savagery, three of barbarism, and one of civilization¹⁾. But his system rests on the unproved supposition, that the stage of culture a people has attained to entirely depends on its tech-

1) Morgan, *Anc Soc.*, see especially, pp. 10—12.

nical ability in the arts of subsistence. Vierkandt has recently made another distinction. Besides the civilized and semi-civilized peoples he has two categories: migratory tribes (*unstete Völker*), and primitive peoples proper (*eigentliche Naturvölker*). The former are the Australians, Tasmanians, Andamanese, Veddahs, Negritos, Kubus, Bushmen, African pigmy-tribes, Fuegians and Botocudos; the latter the American Indians, Arctic races, Northern Asiatics, Caucasus tribes, hill-tribes of India, Negroes to the South of the Soudan, inhabitants of the Malay Archipelago and Oceanic Islands ¹⁾. But this division cannot be of any use to us. It is not the result of an extensive and accurate examination of the facts; the writer himself admits that he has followed his general impressions ²⁾. His *unstete Völker* are simply those generally known as the „lowest type of man”, whether justly or unjustly we do not know ³⁾. And his *eigentliche Naturvölker* comprehend savages of widely different degrees of development. Moreover, although he says his criterion is the psychical state of man, the economic side of social life comes always prominently into view ⁴⁾; but the author does not even try to prove that the psychical state of man depends upon the stage of economic development. His characterization of the psychical difference between primitive and civilized man is very valuable; but, like so many sociologists, Vierkandt makes some ingenious remarks, and leaves the difficult work, the careful examination of the facts, to others ⁵⁾.

Yet, as it can be easily done here, we may inquire whether Vierkandt's *unstete Völker* have slaves. It will be seen from the second Chapter of our first Part that all of them are un-

1) Vierkandt, pp. 67, 69

2) Vierkandt, p. 61

3) Peschel (pp. 144, 145) has already given nearly the same list. Vierkandt adds to Peschel's list the Negritos, Kubus and African pigmy-tribes. Why does he exclude the Ainu and the inhabitants of the Californian peninsula?

4) Vierkandt, pp. 67, 69, 71, 72. His distinction of nomadic and settled half-civilized peoples is entirely an economic one.

5) See Steinmetz, *La Méthode de la Sociologie*

acquainted with slavery ¹⁾. This conclusion, however, is not of much use to us, as we do not know whether they have been justly or unjustly classified under one category.

No other attempts have been made, as far as we know, to classify the savages according to their general culture ²⁾. So the method of investigation that would seem the best is not applicable here. Therefore we are also unable to ascertain whether, as some writers assert, slavery at a certain stage of social development is universal. Bagehot says of slavery: „There is a wonderful presumption in its favour; it is one of the institutions which, at a certain stage of growth, all nations in all countries choose and cleave to” ³⁾. Grünberg expresses the same view: „No people has always and in all phases of its development been unacquainted with slavery” ⁴⁾. According to Spencer „observation of all societies in all times shows that slavery is the rule and freedom the exception” ⁵⁾. And Tourmagne exclaims: „This almost universal scourge, going back to the very origin of the nations and affecting all of them, is it not to be regarded as a social stage that every people has to traverse, as an evolution which it is obliged to undergo, before it can attain to the higher degrees of civilization” ⁶⁾? If we had an ascending series of stages of culture, we might inquire whether, within the limits of savagery (for the civilized and semi-civilized peoples fall beyond the scope of the present volume) there is a stage at which slavery is universal. But, as we have already remarked, this is not yet possible.

The best method we can use now will be to take into view one prominent side of social life, that may reasonably be sup-

1) We may leave out of the question Zu Wied's dubious statement about the Botocudos. Of the pigmy-tribes we do not know very much, but nowhere is it stated that any of them have slaves.

2) Sutherland's „Classification of Mankind” (Sutherland, I pp. 103 sqq.) does not appear to rest upon a solid basis.

3) Bagehot, p. 72.

6) Tourmagne, p. 3.

posed to have much influence on social structure, especially on the division of labour; and to inquire whether this one factor may entirely, and if not to what extent it may, account for the existence or non-existence of slavery in every particular case. Here the economic side of life comes in the first place into consideration. We are not among the adherents of the materialistic theory of history; it is quite unproved and seems to us very one-sided. But we may suppose that the division of labour between the several social groups within a tribe, and therefore also the existence or non-existence of slavery, largely depends on the manner in which the tribe gets its subsistence. Whether, and to what extent, this supposition is true, will be shown by the examination of the facts. If this hypothesis fails to account for all the facts, we shall try, with the aid of other hypotheses, to explain the rest.

The opinion that the existence of slavery mainly depends on the mode of subsistence is also held by many theorists. According to Morgan „slavery, which in the Upper Status of barbarism became the fate of the captive, was unknown among tribes in the Lower Status in the aboriginal period” This Lower Status of barbarism begins with „the invention or practice of the art of pottery”. Anterior to the art of pottery was „the commencement of village life, with some degree of control over subsistence”. It ends with „the domestication of animals in the Eastern hemisphere, and in the Western with cultivation by irrigation and with the use of adobe-brick and stone in architecture”¹⁾. So slavery, according to Morgan, does not exist before a rather advanced period.

Several writers assert that hunters and fishers never have slaves. According to Schmoller „no people unacquainted with cattle-breeding and agriculture has slaves”²⁾. Ingram expresses the same view: „In the hunter period the savage warrior does not enslave his vanquished enemy, but slays him; the women of the conquered tribe he may, however, carry off and

1) Morgan, *Anc Soc.*, pp 80, 10, 13, 11

2) Schmoller, p 1010.

appropriate as wives or as servants, for in this period domestic labour falls almost altogether on the female sex. In the pastoral stage slaves are captured only to be sold, with the exception of a few who may be required for the care of flocks or the small amount of cultivation which is then undertaken. It is in proportion as a sedentary life prevails, and agricultural exploitation is practised on a larger scale, whilst warlike habits continue to exist, that the labour of slaves is increasingly introduced to provide food for the master, and at the same time save him from irksome toil. Of this stage in the social movement slavery seems to have been a universal and inevitable accompaniment." But he makes an exception in the case of those communities where „theocratic organisations established themselves" ¹⁾. Flügel says: „Hunting tribes can neither feed nor employ the prisoners; generally they kill them" ²⁾. According to Schurtz „among tribes of migratory hunters there is no room for slavery" ³⁾. Whether he means here all hunters or only Vierkandt's *unstete Völker* is not clear.

Pastoral nomadism especially is considered favourable to the growth of slavery. The nomadic herdsman, who had learned to domesticate animals, began also to domesticate men, i. e. to enslave them. According to Lippert slavery „first arises in the patriarchal communities of pastoral peoples". „They [the slaves] were the object of an appropriation entirely similar to the appropriation of the domestic animals" ⁴⁾. Lamprecht also asserts that the prisoners, who formerly were either sacrificed or adopted into the community, in the pastoral stage were enslaved, because many hands were wanted to tend the cattle ⁵⁾. Dimitroff says that originally the captives were instantly killed like the game, as was the case amongst the hunting tribes of America, Australia and Africa. But as

1) Ingram, pp 1, 2

2) Flügel, p 95

3) Schurtz, p 110

4) Lippert, II pp 522, 535

5) Lamprecht, I p 165

soon as man began to tame animals, he also learned to employ the captives as labourers¹⁾.

A few theorists, however, who are more familiar with ethnographical literature, know that it is not only among pastoral and agricultural tribes that slavery is to be found. So Peschel states. According to him hunters cannot employ slaves. Fishers, however, sometimes do so, as on the Northwest Coast of America, amongst the Koniagas, Koloshes, and Ahks of Vancouver Island. But only at the agricultural stage is slavery practised on an extensive scale²⁾. Wagner is of the same opinion: „In the earliest economic state of society slavery is quite or nearly unknown; generally speaking slavery is coeval with a settled and agricultural life. This is to be accounted for by economic causes; for only in the agricultural stage can slave labour be of any considerable use. Therefore slavery is unknown among hunters, and occurs but seldom among fishers. Bondage (*Unfreiheit*) presents itself already under several forms among nomadic herdsmen; but only among settled agricultural peoples does it attain to its full development”³⁾. Tylor remarks that slavery exists, as soon as the captives are spared to till the soil; but he adds that even among savage hunters and foresters absolute equality is not always to be found⁴⁾. Spencer says: „Tribes which have not emerged from the hunting stage are little given to enslaving the vanquished; if they do not kill and eat them they adopt them. In the absence of industrial activity, slaves are almost useless, and indeed, where game is scarce, are not worth their food. But where, as among fishing tribes like the Chinooks, captives can be of use, or where the pastoral and agricultural stages have been reached, there arises a motive for sparing the lives of conquered men, and after inflicting on them such mutilations as mark their subjection, setting

1) Dimitroff, p 88

2) Peschel, p 253 „Koloshes” is the Russian name for Tlinkits.

3) Wagner, p 375

4) Tylor, *Anthropology*, p 434

them to work" ¹⁾). Bos is also aware of the fact, that the Tlinkits and similar tribes have slaves. He explains this in a curious way: slavery does not agree with the nature of hunting tribes; therefore it is probable that these tribes formerly were agricultural to a small extent ²⁾). Felix remarks that slavery already exists at the beginning of the agricultural stage ³⁾). Mommsen, however, asserts that in the oldest times (until when does not appear) slavery did not prevail to any considerable extent; more use was made of free labourers ⁴⁾).

Letourneau expresses his opinion very prudently: slavery was not carried on on a large scale before men applied themselves to cattle-breeding and especially to agriculture ⁵⁾). At the end of his book on slavery of over 500 pages he contents himself with this vague conclusion

We see that the theories disagree very much. Whether any of them agree with the facts will appear from the investigation we are about to undertake.

§ 2. *Distinction of economic groups.*

This investigation will be carried on in the following manner. The tribes that afforded clear cases in the second Chapter of the first Part will be divided into several groups according to their economic state. It will be seen then how many positive and how many negative cases there are in each group; and we shall try to explain why the result is such as we shall find it. Perhaps we shall be able to account for this result entirely by economic causes; if not, we shall inquire what other causes there may be.

The following economic states will be distinguished:

1°. *Hunting and fishing,*

1) Spencer, *Ind Inst*, p. 459.

2) Bos, p. 191

3) Felix, II p. 250

4) Mommsen, I p. 191

5) Letourneau, p. 491. See also Sutherland I p. 379

- 2°. *Pastoral nomadism,*
- 3°. *First stage of agriculture,*
- 4°. *Second stage of agriculture,*
- 5°. *Third stage of agriculture*

It has to be remarked that this is *not an ascending series of stages of economic development*. What the economic evolution has been we do not exactly know. Little credit is given to-day to the old division into the three successive stages of hunting, pastoral nomadism, and agriculture. This was not yet so in 1884, when Dargun could still write: „The evolutionary stages of hunting, pastoral, and agricultural life are so well established in science as stages of human evolution in general, that it seems rather audacious to object to this division. Taken in general, however, it is false; on the greater half of the globe pastoral life was not a transitory stage from hunting to agriculture; therefore the people concerned had not to pass through any regulation of property peculiar to herdsmen. They learned agriculture without having been pastoral. This phenomenon comprehends two parts of the world — America and Australia-Polynesia — completely, and two other parts — Asia and Africa — to a great extent, as the Malay Archipelago and the territory of the Negro tribes across Africa also are included. Therefore it will be necessary to leave off considering the three stages of hunting, pastoral and agricultural life as a rule of human progress. Moreover, nearly all pastoral tribes carry on agriculture, however negligently; and it is not at all certain that the origin of the latter does not go back to a more remote period than cattle-breeding; it is even probable that it does, for nomadic herdsmen are on the whole more civilized than the rudest agricultural tribes; cattle-breeding therefore is posterior to primitive agriculture”¹⁾. This view of Dargun’s is now generally accepted. But a new ascending series that has any scientific value does not yet exist. And so we can only distinguish economic states, not stages of economic development.

1) Dargun, pp 59—61.

A few remarks must still be made on each of our groups. These remarks will also serve to justify our division.

I. Hunting and fishing.

This group comprehends those tribes only that are entirely unacquainted with agriculture and cattle-breeding. Sometimes agriculture is carried on to such a small extent, that the tribe subsists almost entirely on hunting, fishing and gathering wild vegetable food. Such tribes bear much resemblance to true hunters; but if we called them hunting tribes it would be very difficult to draw the line of demarcation between them and other agricultural tribes; moreover, such tribes are not exactly in the same economic state as true hunters. So we have classified them under the agricultural groups.

Such tribes as use animals (especially horses) only as a means of locomotion, are hunters, viz. if they are unacquainted with agriculture; at any rate they are not pastoral tribes. This is the case with several tribes of North and South America.

II. Pastoral nomadism.

The tribes belonging to this group subsist mainly on the milk and meat of their cattle. Most of them also undertake a small amount of cultivation (see the above-quoted passage of Dargun's), whereas many agricultural tribes rear cattle. We shall draw the line of demarcation thus: this second group will contain those tribes only that depend so much on their cattle, that the whole tribe or the greater part of it is nomadic; whereas those who, although living for a considerable part on the produce of their cattle, have fixed habitations, will be classified under the agricultural groups.

III, IV, V. Agriculture

Grosse makes a distinction between lower and higher agriculture; but as the former comprehends nearly all agricultural savages, this distinction cannot be of any use to us ¹⁾ Hahn,

1) Grosse, p. 28.

in his book on the domestic animals, distinguishes hoe-culture (*Hackbau*), agriculture proper (*Ackerbau*) and horticulture (*Gartenbau*)¹⁾. But hoe-culture is carried on by nearly all agricultural savages; besides, this division is purely technical and therefore cannot serve our purpose. What we want is a division according to the place agriculture occupies in social life. We must ask to what extent a tribe is occupied in and dependent for subsistence on agriculture. For on this, and not on the form of the agricultural implements, it will depend whether slaves are wanted to till the soil. A slave may be set to handle the hoe as well as the plough. We might even say, the ruder the agricultural implements, the more disagreeable it is to till the soil, and the more likely that a man does not want to do it himself if he can get a slave to do it for him.

Perusing the ethnographical literature, we found such great differences between the several savage tribes in this respect, that we have thought it best to distinguish three stages of agriculture²⁾. The principle according to which the distinction will be made is, as we have already hinted, the extent to which a tribe depends upon agriculture for its subsistence. The *first* agricultural group will contain those cases, in which agriculture holds a subordinate place, most of the subsistence being derived from other sources, viz. hunting, fishing or gathering wild-growing vegetable food³⁾. The tribes of the *second* group carry on agriculture to a considerable extent, but not to the exclusion of hunting etc. The *third*, or highest, agricultural stage is reached, when agriculture is by far the principal mode of subsistence, and hunting etc. hold a very subordinate place, so much so that, if the latter were entirely wanting, the economic state would be nearly the same.

1) Hahn, Die Haustiere, pp 388 sqq

2) Whereas our 5 economic groups are not an ascending series, these 3 agricultural groups are. Primitive agriculture must be anterior to a more developed state of agriculture

3) This group is nearly identical with Dargun's *Jägerbauern*, see Dargun, p 60 note 1.

But our information is not always very complete; and so it is not always clear to what extent subsistence is derived from agriculture. In such cases we shall make use of some *secondary characteristics*. Some facts may be recorded from which we can more or less safely draw conclusions as to the place agriculture occupies. The facts indicative of the first stage of agriculture are: 1. Women only are occupied in agriculture ¹⁾, 2. The tribe is very mobile, habitations are often shifted. Those indicative of the second stage are: 1. The tribe has fixed habitations (except where this is due to an abundance of fish or fruit-bearing trees), 2. The lands are irrigated. Those indicative of the third stage are: 1. The lands are manured, 2. Rotation of crops is carried on, 3. Domestic animals are used in agriculture, 4. Agricultural products are exported.

It is not, of course, necessary that in every case a whole set of characteristics is found. Sometimes a part of them only are mentioned. Besides, there is much overlapping: a characteristic of the first stage may be found connected with one of the third. In all such cases we must not forget that these secondary characteristics have only signification as indications of the place occupied by agriculture, so they have not a fixed value; in every particular case the manner in which they are mentioned, the place they hold in the whole of the description etc. will decide what importance we are to attach to each of them.

Hitherto we have supposed that agricultural tribes did nothing else besides tilling the soil, except hunting, fishing and gathering wild vegetable food. But it may also be that they subsist partly on agriculture, partly on cattle-breeding or trade ²⁾. In these cases we cannot apply the same principle of division. A tribe that subsists partly on agriculture, but

1) See Dargun, p. 110, and Hildebrand, *Recht und Sitte*, p. 44

2) Under «trade» we shall also comprehend industry. Industry as a mode of subsistence, not of a few individuals, but of a whole tribe, has but little significance where the manufactured goods are not exchanged abroad.

chiefly on trade is not to be classified under the same category as a tribe that subsists partly on agriculture, but mainly on hunting. The latter is not yet agricultural, the former has perhaps passed beyond the agricultural stage. Here we may regard only the technical ability attained to in agriculture. Where agriculture is technically little developed, we have probably to deal with former *Jagerbauern* who have become traders. Where agriculture has reached a high perfection, but trade is one of the chief modes of subsistence, the tribe has probably passed through the higher stages of agriculture. What we say here of trade equally applies to cattlebreeding.

There are a few tribes that afforded clear cases in the second Chapter of our first Part, but about the economic state of which we are not sufficiently informed. These will be left out here.

The literature used is the same as in Part I Chap. II ¹⁾. We have not thought it necessary to quote the pages relating to each tribe. In most ethnographical records the mode of subsistence occupies a conspicuous place, so any one wishing to verify our conclusions may easily find the passages concerned.

§ 3. *Hunting and fishing, pastoral, and agricultural tribes in the several geographical districts*

We shall give here a list of the tribes that afforded „clear cases” in the second Chapter of Part I, stating, after the name of each tribe, the economic condition in which it lives. As we have said before, we shall omit a few tribes, about the economic state of which we are not sufficiently informed.

It will not perhaps be superfluous to remind the reader that, as our list contains only „clear cases”, it gives no evidence as to the economic state of each geographical group. If, for instance, in our list some geographical group contains as many hunting as agricultural tribes, this does not prove that

1) About the Malay Archipelago we have also consulted De Hollander, and about Africa, Ratzel

in this group hunters and agriculturists are equally divided; for the group may contain many more tribes, which in our second Chapter have not afforded „clear cases”; and what is the economic state of these tribes does not appear from our list.

Among the agricultural tribes we have separately noted those, among which subsistence depends largely either on cattle-breeding or on trade, in addition to agriculture.

We shall make use of the following abbreviations.

h means hunting or fishing; the tribes so marked are hunters or fishers.

c means cattle-breeding; the tribes so marked are pastoral tribes.

a^1 , a^2 , a^3 means first, second, third stage of agriculture.

$a^1 + c$ means an agricultural tribe of the first stage, among which subsistence depends largely on cattle-breeding; similarly $a^2 + c$ and $a^3 + c$.

$a^1 + t$ means an agricultural tribe of the first stage, among which subsistence depends largely on trade; similarly $a^2 + t$ and $a^3 + t$.

$a^2 + c + t$ means an agricultural tribe of the second stage, among which subsistence depends largely both on cattle-breeding and trade; similarly $a^3 + c + t$.

CHAPTER II — HUNTERS AND FISHERS

§ 1. *Why slaves are not of much use to hunters.*

Among the „clear cases” of the second Chapter of our first Part the following are hunting and fishing tribes.

Positive cases. North America: Aleuts,
Athka Aleuts,
Koniagas,
Tlinkits,
Haidas,
Tsimshian,
Bilballas,
Nootkas (including Ahks),
tribes about Puget Sound,
Fish Indians,
Taculhes,
Atnas,
Simulkameem,
tribes of W. Washington and
N. W Oregon,
Chinooks.

South America: Abipones,

Tehuelches.

2

Siberia: Kamtschadales.

1

18.

Negative cases. North America: the 9 tribes of Eskimos proper,
 Kutchins,
 Chepewyans,
 Montagnais,
 Ojibways,
 Ottawas,
 Shahnees,
 Crees,
 Blackfeet nation,
 Sioux,
 Osages,
 Assiniboinis,
 Hupas,
 Lower Californians

22

South America. wild tribes of North Mexico,
 Botocudos,
 Charruas,
 Minuanes,
 Puelches,
 Fuegians.

6

Australia: the 23 Australian tribes

23

Malay Archipelago: Kubus,
 Negritos.

2

Indo-Chinese peninsula: Andamanese,
 Southern Nicobarese.

2

India: some Santal tribes,

| | | |
|------------------|--|----------|
| | Veddahs. | <u>2</u> |
| Siberia: | Ghiliaks, Tuski of the Coast, settled Koryakes, Ainu. | <u>4</u> |
| Pigmies, etc.: | Bushmen, Mucassequere, Akkas. | <u>3</u> |
| Hamitic peoples: | Wandorobo. | <u>1</u> |

65.

So the great majority of the 83 cases we have got are negative. This fact agrees with the opinion of those theorists who assert that this economic state is unfavourable to the development of slavery. The existence of 18 positive cases, however, shows that those are wrong who hold that no people unacquainted with agriculture and cattle-breeding ever has slaves.

We have to explain now, why most hunters and fishers do not keep slaves. In a few cases the fact that they are inclosed between superior peoples and reduced to a dependent, powerless state, might afford sufficient explanation. So the Wandorobo, according to Thomson, are considered by the Massai as a kind of serfs; and Johnston calls them a helot race¹). But with most of our hunters and fishers, who do not keep slaves, this is not the case, as is proved by their being often at war with their neighbours. It has been shown that the Ojibways, Sioux, Osages in North America, the Charruas, Minuanes and Puelches in South America either kill or adopt their prisoners, that the Andamanese also sometimes adopt captive children, that the Montagnais generally tortured their prisoners

1) Thomson, *Through Massailand*, p. 448, Johnston, p. 402

to death, that warfare is also known among the Botocudos¹⁾. And the most striking evidence is afforded by the Australians, an isolated group consisting entirely of hunters, in which slavery is altogether unknown. So the non-existence of slavery among the great majority of the hunters and fishers must be due on the whole to more general causes; and only if the latter fail to account for the absence of slavery among the Wandarobo or any other tribe in a similar subjected state, may we have recourse to an explanation by this state.

What general causes may there be? Spencer, speaking of hunters, says: „In the absence of industrial activity, slaves are almost useless; and, indeed, where game is scarce, are not worth their food”²⁾. It is true, where food is more plentiful than it is among most hunters, slaves can be of more use; but we cannot think that the only cause why slavery does not exist, is that the slave is „not worth his food”, i. e. that the produce of a man's labour cannot much exceed his own primary wants. For we meet with several instances, among these tribes, of people whose wants are provided for by the labour of others. In our first Part we saw, that the Australian men depend largely for their subsistence on the work of their wives. Some other statements are indicative of a similar state of things. Dawson says of the natives of the Western District of Victoria: „Great respect is paid to the chiefs and their wives and families. They can command the services of every one belonging to their tribe. As many as six young bachelors are obliged to wait on a chief, and eight young unmarried women on his wife; and as the children are of superior rank to the common people, they also have a number of attendants to wait on them Food and water, when brought to the camp, must be offered to them first, and reeds provided for each in the family to drink with, while the com-

1) See above, pp 53, 59, 60, 76, 81, 82, 122 The Montagnais seem also sometimes to have adopted prisoners Le Jeune observed a young Iroquois, whom they had adopted Jesuit relations, VI p 259

2) Spencer, Ind Inst., p 459

mon people drink in the usual way. Should they fancy any article of dress, opossum rug, or weapon, it must be given without a murmur" ¹⁾). And of the chiefs of the Andaman islanders we are told: „They and their wives are at liberty to enjoy immunity from the drudgery incidental to their mode of life, all such acts being voluntarily performed for them by the young unmarried persons living under their headship" ²⁾).

So there are people here whose wants are provided for by the work of others; therefore scarcity of food cannot be the only cause why slavery does not exist, and we have to examine what other causes there may be ³⁾).

The reader will remember, from the details given in the first Part that slaves are frequently acquired from without the community to which the slave's owner belongs, by war, kidnapping or trade. It may be convenient to give this phenomenon the technical name of *extratribal slavery*, whereas we shall speak of *intratribal slavery* in those cases where the slave remains within the same community to which he belonged before being enslaved, e g. a debtor-slave. Now the keeping of extratribal slaves must be very difficult to hunters. Hunting supposes a nomadic life; and the hunter, who roams over vast tracts of land in pursuit of his game has not much opportunity to watch the movements of his slave, who may be apt to run away at any moment. And if the slave himself is set to hunt, the difficulty amounts nearly to impossibility. Moreover, the hunting slave will be much more inclined to run away than a soil-tilling slave; for the latter, during his flight, has to live in a make-shift way on the spontaneous products of nature; whereas the former continues hunting, as he has always done; his flight has not the character of a flight.

Another cause is the following. Primitive hunters generally

1) Dawson, p 5

2) Man, p 109

3) Another instance of people providing for the wants of others is the marriage by service, the young man serving the parents of his bride, sometimes for several years. This even occurs among the Anu, Bushmen, and Fuegians, see Westermarck, pp. 390, 391.

live in small groups. „Even now” says Westermarck „there are savage peoples of the lowest type, who live rather in separate families than in tribes, and facts indicate that the chief reason for this is want of sufficient food”¹⁾. Hildebrand gives several instances. „The Nilgala Veddahs are distributed through their lovely country in small septs or families.” The Kubus of Sumatra live in small hordes or families. Among the Negritos each family holds communication only with a few neighbouring families. The Woguls in their woods live in families. The Indians of Upper California „living on acorns, wild chestnuts and the seeds of various plants, cannot form large communities.” The Indians of the Rocky Mountains „exist in small detached bodies and single families”. „The Indians of the thick woods, of necessity, from the scarcity of animals, camp only in small numbers.” To the north of the Amazon River there are tribes consisting of one or a few families, and living in complete isolation from their neighbours. The Fuegians „appear to live in families and not in tribes”. Among the Bushmen a horde generally consists only of the members of one family²⁾. And Sutherland remarks „The middle savages, on the average of six races, reach about 150 as the social unit.” „The upper savages, as typified by the North American Indians, would average about 360 to an encampment”³⁾ Now it is easy to understand, that such small communities would not be able to develop much coercive power over slaves introduced into the tribe from foreign parts. A fugitive slave would be very soon beyond the reach of the tribe; and a comparatively small number of slaves would be dangerous to the maintenance of power by the tribesmen within the tribe.

But the nomadic life of hunting tribes does not prevent the existence of intratribal slavery; such slavery might even be

1) Westermarck as quoted by Hildebrand, *Recht und Sitte*, pp 1, 2.

2) Hildebrand, *Recht und Sitte*, pp 2, 3

3) Sutherland, I p 360

compatible with living in small groups. There are however other, more internal causes.

If there were slaves, i. e. male slaves, for slavery proper does not exist where all slaves are women, they would have to perform either the same work as free men, or the same work as free women. One might object, that sometimes slaves have separate kinds of labour assigned to them, which are performed by slaves only. This is true; but when slaves began to be kept it must have been otherwise. It is not to be supposed that men, convinced of the utility of some new kind of labour, began to procure slaves in order to make them perform this labour; or that, finding some work tedious, they invented slavery to relieve themselves of this burden. Modern psychology does not account for psychical and social phenomena in such a rationalistic way ¹⁾. Differentiation of slave labour from free labour cannot have existed in the first stage of slavery. Therefore two problems are to be solved ^{1°}. why are there no slaves performing men's work? ^{2°}. why are there no slaves performing women's work?

Men's work, besides warfare, is hunting. Now hunting is never a drudgery, but always a noble and agreeable work. Occupying the whole soul and leaving no room for distracting thought; offering the hunter a definite aim, to which he can reach by one mighty effort of strength and skill; uncertain in its results like a battle, and promising the glory of victory over a living creature; elevating the whole person, in a word intoxicating; it agrees very well with the impulsiveness of savage character ²⁾. Therefore it is not a work fit to be imposed upon men who are deprived of the common rights of freemen and are the property of others.

For, first, good hunters are highly respected. This appears from several statements. Ottawa women respect a man who is

1) Social institutions are sometimes made, but this is the exception generally they grow

2) See Ferrero's beautiful exposition of this character.

a good hunter¹⁾. Tasmanian fathers took care to give their daughters to the best hunters²⁾. Among the Dumagas (a Negrito tribe) a man who wishes to marry must show his skill in shooting³⁾. Ojibway parents try to give their daughters to good hunters. If the husband is lazy the wife may leave him⁴⁾. In Western Victoria „if a chief is a man of ability, exhibiting bravery in battle or skill in hunting, he is often presented with wives from other chiefs”⁵⁾. Among the Andaman islanders social status is dependent „on skill in hunting, fishing etc. and on a reputation for generosity and hospitality”⁶⁾. Le Jeune tells us of a Montagnais, who was laughed at because he was a bad hunter. This was a great disgrace among the savages; for such men could never find or keep a wife⁷⁾. A describer of Kamtschatka says of the dangerous sea-lion hunting: „This chase is so honourable, that he who has killed most sea-lions is considered a hero; therefore many men engage in it, less for the sake of the meat, that is looked upon as a delicacy, than in order to win renown”⁸⁾. In W. Washington and N. W. Oregon „a hunter is, in fact, looked upon with respect by almost every tribe in the district”⁹⁾. Even among the pastoral Colonial Hottentots those who had killed a savage animal were highly respected by their countrymen¹⁰⁾. Personal qualities, among such tribes, are the only cause of social differentiation. Wealth does not yet exist¹¹⁾; and hereditary nobility is unknown. And so a good hunter cannot be considered by public opinion as a slave, the more so as a good hunter is also a good warrior; and without the aid of public opinion

the master is not able to keep him subjected. And a bad hunter would be of little use as a hunting slave¹⁾.

This prevents the growth of intratribal slavery: no member of the tribe is so superior to any other member, that he can reduce him to a state of complete subjection; except perhaps where the latter is physically or psychically much weaker; and then he would not be of any use as a hunting slave. But it also prevents extratribal slavery. Enemies are hated, but not despised. In Central North America prisoners are either killed or adopted, and in the latter case entirely considered and treated as members of the tribe. Sometimes a captive is spared for his bravery; he is then provided with all necessities and dismissed to his home²⁾. Even those who are intended to be killed, are in the meantime treated with all due honours, sometimes even provided with wives³⁾. Enemies, if allowed to live, are on a footing of equality with the tribesmen; another state of things is not yet thought possible.

But even if the idea of subjecting tribesmen or enemies had entered the minds of these hunters, hunting slaves would not be of any use. For hunting requires the utmost application of strength and skill; therefore a compulsory hunting system cannot exist. If a man is to exert all his faculties to the utmost, there must be other motives than mere compulsion. It is for the same reason that in countries where manufactures are highly developed, a system of labour other than slavery is required „It remains certain” Stuart Mill remarks, „that slavery is incompatible with any high state of the arts of life, and any great efficiency of labour. For all products which

1) Members of despised classes are often excluded from the occupations considered noble by the community. So the Jews in the Middle Ages were not allowed to hold real property (except in some periods in the South of France and Spain), nor to enter into corporations and trades (Nys. p. 136). The expulsion of Jews from the army in certain modern states belongs to the same order of things.

2) Grinnell, p. 123.

3) See Charlevoix, *Nouv. France* III p. 246 (about the Hurons and Iroquois), Lery, p. 225 (about the Tupinambas). These tribes are not hunters proper, but *Jägerbauern*, but this is rather a proof *a fortiori*.

require much skill, slave countries are usually dependent on foreigners.... All processes carried on by slave labour are conducted in the rudest and most unimproved manner" ¹⁾). And Cairnes says that the slave is „unsuited for all branches of industry which require the slightest care, forethought, or dexterity. He cannot be made to co-operate with machinery; he can only be trusted with the coarsest implements; he is incapable of all but the rudest forms of labour" ²⁾). Kruijt, describing the natives of Central Celebes, speaks in the same way: „The free Alifur works as hard as his slave and even harder; for during the hours that there is nothing to do in the gardens, the freeman has to mend the furniture, plait baskets, and cut handles from wood or horn, etc. all which work the slave does not understand" ³⁾). A freeman may give his whole mind to his work, because he knows he will enjoy the fruits of it, and still more because he will win a reputation by it among his fellow-men. The slave has not these motives; he works mainly on compulsion ⁴⁾). And as both hunting and higher industrial labour require much personal application, neither can be well performed by slaves. Here extremes meet, if hunting and manufactures are to be considered as extremes, which we are inclined to doubt, at least regarding those tribes that have brought the art of hunting to a high perfection; such hunting probably supposes more development of cerebral power than the lowest stage of agriculture ⁵⁾). But there is a difference between hunting and manufactures. In manufacturing countries, where slavery exists, it does not disappear as soon as the arts of life are so much developed that free labour is more productive than slave labour. In such countries, besides the higher kinds of labour, there is still ruder work to be done, that can be done by slaves as well. But the main cause is

1) Mill, p 302

2) Cairnes, p 46

3) Kruijt, N Z G XXXIX p 122

4) See Wagner, p 389

5) See Bücher, p 9, and Fritsch's beautiful description of Bushman hunting, Fritsch, pp 424 sqq

this: slavery has passed into the laws and customs; social life is based upon it; and so it remains for a long time after its economic basis has fallen. Slavery in such cases, by a gradual mitigation, is made to agree with changed economic conditions: the slave is given a proportionate share in the produce of his labour; he is allowed to buy his freedom by means of his savings; or his obligations are restricted to fixed tributes and services, and so the slave becomes a serf¹⁾. But our Australians and other hunting tribes have not probably ever done anything but hunting; and so neither present wants induce them to make slaves, nor do the traditions of the past maintain slavery²⁾. We may add, that supervision of the work of a hunting slave would be nearly impossible. An agricultural slave can work in the presence of and surveyed by his master; but hunting requires rather independent action.

So slaves cannot be employed in hunting. They might, however, be set to do women's work, i. e. „erecting habitations, collecting fuel and water, carrying burdens, procuring roots and delicacies of various kinds, making baskets for cooking roots and other purposes, preparing food, and attending to the children”³⁾. But, first, nomadic life and the requirements of the work would, in this case too, very much facilitate the escape of the slave. Moreover, the men are not likely to take the pains of procuring slaves for the benefit of their wives only. We must also take into consideration, that these small tribes are very much in need of the forces of every man in hunting and still more in warfare; therefore an able-bodied boy will be brought up to be a hunter and warrior, rather than given to the women as a slave. And finally,

1) See the excellent exposition of the causes and development of this mitigation by Wagner, pp 390—405

2) The assertion of some writers (e g Waitz-Gerland, VI pp, 767, 796), that the Australians have declined from a higher state of culture, seems to us quite unfounded

3) This description given by Dawson (p 37) of female labour in Western Victoria, may be taken as a fair type of female labour among hunters in general.

where war is frequent, such slaves, not being able to fight, would soon be eliminated in the struggle for life, whereas women are often spared because they are women¹⁾. Therefore it is only among tribes which either live in peaceful surroundings, or are so powerful as not to have to fear their neighbours very much, that men performing women's work are to be found. Crantz speaks of a young Greenlander who was unable to navigate, because when a child he had been taken too much care of by his mother. „This man was employed by other Greenlanders like a maid-servant, performing all female labour, in which he excelled”²⁾. Among the Central Eskimos, according to Boas, „cripples who are unable to hunt do the same kind of work as women”³⁾. Tanner tells us of an Ojibway, who behaved entirely as a woman, and was kept as a wife by another Ojibway. He excelled in female labour, which he had performed all his life. Such men, according to Tanner, are found among all Indian tribes; they are called *agokwa*⁴⁾. But in all these cases the men who perform female labour are not slaves. Crantz's young Greenlander probably was glad to earn his livelihood in this way. Female labour among the Greenlanders is not so much valued, that it was worth while to compel him to work. Widows and orphans are sometimes taken as servants; but this is done rather as a favour; for else they would have to starve⁵⁾. Among the Central Eskimos only those who are unable to hunt do the same work as women; a man able to hunt will never be compelled to do female work. And the men of Tanner's narrative are entirely treated as women and somehow perform the sexual functions of wives; the performing of domestic labour only would not probably be sufficient for them to get their sub-

sistence ¹⁾). Only where either peaceful surroundings or a fighting power much superior to that of the neighbours makes the existence of men performing female labour possible, and where at the same time female labour is so much valued that the more labourers can be got to do it the better, can there be male slaves performing women's work ²⁾). Whether these requirements are fulfilled in any of our positive cases, will appear from our investigation of these cases.

The non-existence of slavery among most hunters and fishers now being accounted for, we shall proceed to an inquiry into the causes of the existence of slavery among 18 hunting and fishing tribes.

§ 2. *The slave-keeping tribes of the Pacific Coast.*

Going on to account for our 18 positive cases, we may remark in the first place, that what we have said about the causes preventing the existence of slavery, applies much more to hunters than to fishers. Fishers are not necessarily so nomadic as hunters; and where a sedentary life prevails, there is more domestic work to be done, and the slaves cannot so easily escape. Moreover it is not so very difficult to control a fishing slave, who is in the same boat with the master. The slave may also be used to row the boat. Therefore it may be of some use to inquire, how many hunting and how many fishing tribes are to be found among our positive and negative cases. Fishing in our sense includes the killing of water-animals besides fish: whales seals, etc. Where a tribe lives by hunting and fishing, we shall call it a hunting or a fishing tribe, according to the predominating mode of subsistence.

One difficulty arises here. Some tribes, especially Austra-

1) Such men, treated as wives and performing female labour, were very numerous in Kamtschatka, see Steller, p. 350 note

2) Sutherland (I p 379) remarks that «when a slave has to be led by the huntsman skill of his master, he is a burden rather than a help, and amid roving habits it is difficult to see how there can be enough of drudgery to make it convenient to feed him »

lian, subsist largely on wild fruits, roots, berries, grasses, etc., shell-fish and lower land-animals, such as beetles, lizards, rats, snakes, etc.; so that neither hunting in the true sense nor fishing prevails ¹⁾). For our purpose it will be most convenient to classify them under the head of hunters; for the peculiar features of fishing tribes which we have enumerated: fixed habitations, easy supervision of the work of slaves, drudgery such as rowing, are not found among them. Moreover, the gathering of wild-growing vegetable food and the catching of the lower animals, in Australia too, are chiefly incumbent on women, whereas the men hunt; to the division of labour is the same as among other hunters regarding the quality of the work of each sex; only the quantity of male labour is less and of female labour greater here.

Of our positive cases the following are hunters: some tribes about Puget Sound, Atnas, Similkameem, Abipones, Tehuelches. The rest are fishers.

Of our negative cases the following are fishers: Eskimos (9 tribes), Hupas, Fuegians, Southern Nicobarese, Tuski, Ghiliaks, Koryakes, Ainu. The rest are hunters, with the exception of the Chepewyans, of whom Bancroft says: „Their food consists mostly of fish and reindeer, the latter being easily taken in snares. Much of their land is barren, but with sufficient vegetation to support numerous herds of reindeer, and fish abound in their lakes and streams” ²⁾). So we are not able to ascertain whether hunting or fishing predominates among the Chepewyans.

So 5 hunting and 14 fishing tribes have slaves; 48 hunting and 16 fishing tribes have no slaves ³⁾). In other words: *of the hunting tribes 9½ per cent., of the fishing tribes 47 per cent. have slaves.*

1) The Germans call such people *Sammler*

2) Bancroft, p 118, see also Mackenzie, I p 151

3) The positive cases here are $5 + 14 = 19$, instead of 18, because the Indians about Puget Sound count double, some of them being hunters and others fishers. The negative cases are $48 + 16 = 64$, instead of 65, because we have omitted the Chepewyans

We may say now, that hunting is very unfavourable, and fishing not nearly so much so, to the existence of slavery. But it remains to be explained, why a few hunting tribes keep slaves, and why among the fishers the tribes with and without slaves are nearly equally divided

Now it is worth noticing, that the great majority of our positive cases (all except the Abipones, Tehuelches and Kamtschadales) belong to one geographical group: they all live on or near the Pacific Coast of North America, from Behring Strait to the Northern boundary of California. Therefore we may suppose that the existence of slavery among all these tribes is due to the same or nearly the same causes; and a survey of the economic state of this group will probably enable us to find these causes. We shall examine then, whether slavery among the three tribes outside this group can be accounted for by the same causes, or if special causes are at work there.

The circumstances that may be considered as favouring the existence of slavery on the Pacific Coast are the following:

1^o. *Abundance of food*. The Aleuts eat only the best parts of the dried fish; the rest is thrown away ¹⁾ Bancroft tells us that „although game is plentiful, the Haidas are not a race of hunters, but derive their food chiefly from the innumerable multitude of fish and sea animals, which, each variety in its season, fill the coast waters” ²⁾. The Tacullies, „are able to procure food with but little labour” ³⁾. Our author also speaks of the „abundant natural supplies in ocean, stream, and forest” of the Puget Sound Indians ⁴⁾ About the tribes of W. Washington and N. W. Oregon Gibbs remarks. „With all these sources of subsistence, the greater part of which is afforded spontaneously by the land or water, nothing but indolence or want of thrift could lead to want among a population even

2) Bancroft, p. 161

3) Ibid p. 122

4) Ibid, p. 213

greater than we have reason to believe at any time inhabited this district" ¹⁾. The salmon fishery „has always been the chief and an inexhaustible source of food for the Chinooks, who, although skilful fishermen, have not been obliged to invent a great variety of methods or implements for the capture of the salmon, which rarely if ever have failed them" ²⁾. Several other tribes on the Pacific Coast have fixed habitations and live together in large groups, as we soon shall see; therefore amongst them too food must be abundant, though this is not explicitly stated.

The consequence is, that the produce of labour exceeds the primary wants of the labourer much more than for instance in Australia, and the use of slaves is greater.

2^o. Most of these tribes *live chiefly by fishing* (see above). Moreover, there is a *great variety of food*. The Koniagas catch salmon, haddock, whales, seals, deer, reindeer, waterfowls, a small white fish and grizzly bears ³⁾. The Tlinkits eat fish, various kinds of meat and plants, and shell-fish; formerly they also killed whales ⁴⁾. The Haidas have abundance of game and fish. They eat also birds, and various kinds of vegetables. Shell-fish are gathered by the women ⁵⁾. Of some tribes about Puget Sound we are told. „Fish is their chief dependence, though game is taken in much larger quantities than by the Nootkas" ⁶⁾. The Ahts eat fish, roots and berries, and hunt the deer ⁷⁾. The Tacullies eat fish (chiefly salmon), herbs and berries and small game ⁸⁾. The Similkameem eat fresh and dried game of all kinds, the seed of the sunflower, various roots, edible fungi, berries, wild onions ⁹⁾. The tribes of W. Wash-

ington and N. W. Oregon live on fish, roots, berries and a little game. „The roots used are numerous.” „Besides the salmon sturgeon is taken in the Columbia, and a variety of other fish.” Seals and whales are also occasionally killed „Shell-fish in great variety exist in the bays and on the coast” ¹⁾. The basis of the Chinooks' food is salmon; but besides this they eat sturgeon, wild-fowl, deer, rabbits, nuts, berries, wild fruits and roots ²⁾.

We do not attach very much importance to this circumstance; for even the Australians have a great variety of food, and yet they are poorly off ³⁾. But together with the other causes it may have some influence; for where various kinds of food are available, there is a good chance, that the procuring of one or more of them will be a work fit to be performed by slaves.

3^o. They generally have *fixed habitations* and live in *rather large groups*; they are enabled to do so by *preserving food* for winter use. The Koniagas „build two kinds of houses; one a large, winter village residence, . . . and the other a summer hunting hut. . . Their winter houses are very large, accommodating three or four families each.” „The *kashim* or public house of the Koniagas is built like their dwellings, and is capable of accommodating three or four hundred people” ⁴⁾. The Tlinkits during the winter dwell in villages, regularly built and consisting of solidly constructed houses. The greater houses lodge up to 30 persons. „For winter they dry large quantities of herring, roes, and the flesh of animals” ⁵⁾. Haida houses are similar to those of the Tlinkits, but larger, better constructed and more richly ornamented „Fish, when caught, are delivered to the women, whose duty it is to prepare them for winter use by drying” ⁶⁾. Among the Nootkas „each tribe

6) Krause, p. 307, Bancroft, p 163

has several villages in favourable locations for fishing at different seasons". Each house accommodates many families. Fish and shell-fish are preserved by drying; some varieties of seaweed and lichens, as well as various roots, are regularly laid up for winter use ¹⁾. In W. Washington and N. W. Oregon acorns, some kinds of berries, and especially salmon and whale-blubber, are stored for winter use ²⁾. About Puget Sound „the rich and powerful build substantial houses". „These houses sometimes measure over one hundred feet in length, and are divided into rooms or pens, each house accommodating many families." „In the better class of houses, supplies are neatly stored in baskets at the sides" ³⁾. „During a portion of every year the Taculies dwell in villages." „In April they visit the lakes and take small fish; and after these fail, they return to their villages and subsist upon the fish they have dried, and upon herbs and berries" ⁴⁾. The Chinooks do not move about much for the purpose of obtaining a supply of food. They have permanent winter dwellings. „Once taken, the salmon were cleaned by the women, dried in the sun and smoked in the lodges; then they were sometimes powdered fine between two stones before packing in skins or mats for winter use" ⁵⁾. Similar accounts are given of the Ahts and Similkameem ⁶⁾.

These circumstances greatly tend to further the growth of slavery. A settled life makes escape of the slaves more difficult ⁷⁾. Living in larger groups brings about a higher organization of freemen, and therefore a greater coercive power of the tribe over its slaves. And the preserving of food requires

1) Bancroft, pp 183—187

2) Gibbs, pp 194—196

4) Ibid, p 123

5) Ibid, pp 231, 233

6) Sproat, p 37, Allison, p 309

7) Gibbs remarks „East of the Cascades, though it [slavery] exists, it is not so common, the equestrian habits of the tribes living there probably rendering it less profitable or convenient than among the more settled inhabitants of the coast." (Gibbs, p. 188)

additional work; and this work is very fit to be performed by slaves, as it does not require overmuch skill, and has to be done in or near the house, so that supervision of the work is very easy. Moreover, the hope of partaking of the stored food is a tie that binds the slave to his master's house, in much the same manner as a modern labourer is bound by having a share in the insurance fund of the manufactory.

4^o. *Trade and industry* are highly developed along the Pacific Coast. Among the Aleuts „whalefishing is confined to certain families, and the spirit of the craft descends from father to son”¹⁾. The Koniagas are „adapted to labour and commerce rather than to war and hunting”²⁾. Among the Tlinkits there are professional wood-carvers, smiths and silver-smiths. The women are very skilful in plaiting. Very good canoes are made. Formerly they hunted whales with harpoons. Trade was already highly developed before the arrival of the whites; they traded even with remote parts of the coast and with the tribes of the interior. The trade in slaves was formerly carried on on a large scale³⁾. The large and ingeniously built canoes of the Haidas are widely celebrated; they often make them for sale. They have a standard of value: formerly slaves or pieces of copper, now blankets. Their houses are richly ornamented. They are „noted for their skill in the construction of their various implements, particularly for sculptures in stone and ivory, in which they excel all the other tribes of Northern America”⁴⁾. The Tsimshian formerly acted as middlemen in the slave-trade. The southern tribes kidnapped or captured slaves, sold them to the Tsimshian, and these again to the Tlinkits and interior Tinnah. „Each chief about Fort Simpson kept an artisan, whose business it was to repair canoes, make masks, etc.”⁵⁾. The Atnas „understand the art

1) Bancroft, p 90

2) Ibid, p 86.

3) Krause, pp 159, 173, 184, 183, 186

5) Niblack, p 252, Bancroft p 166

of working copper, and have commercial relations with surrounding tribes". They buy their slaves from the Koltshanes ¹⁾. Gibbs states that in W. Washington and N. W. Oregon the Indians of the interior preserve some kinds of salmon, „which after a stay in the fresh water have lost their superfluous oil, and these are often actually traded to those Indians at the mouth of the river or on the Sound. The Dalles was formerly a great depot for this commerce". Some wild-growing roots „were formerly a great article of trade with the interior". The slave-trade is carried on here too. „Many of the slaves held here are . . . brought from California, where they were taken by the warlike and predatory Indians of the plains, and sold to the Kallapua and Tsinuk." „Many of them [the slaves] belong to distant tribes" ²⁾. The tribes about Puget Sound have canoes, beautifully made, painted and polished. The houses of the rich are made of planks split from trees by means of bone wedges. „In their barter between the different tribes, and in estimating their wealth, the blanket is generally the unit of value, and the *hiqua*, a long white shell obtained off Cape Flattery at a considerable depth, is also extensively used for money, its value increasing with its length. A kind of annual fair for trading purposes and festivities is held by the tribes of Puget Sound at Bajada Point." „Slaves are obtained by war and kidnapping, and are sold in large numbers to northern tribes" ³⁾. Of the Nootkas Bancroft says: „Trade in all their productions was carried on briskly between the different Nootka tribes before the coming of the whites." „The slave-trade forms an important part of their commerce." Harpooners are a privileged class ⁴⁾. The several divisions of the Ahts mutually exchange the fish that each of them catches. They also sell mats and baskets manufactured by the women ⁵⁾.

1) Bancroft p 135

2) Gibbs, pp 195, 193, 188, 189

3) Bancroft, pp 211, 216—218

4) Ibid., pp 192 187, 194

5) Sproat, pp 38, 97

Among the Makah (a Nootka tribe) the whale-oil „is used as an article of food as well as for trade The Makah were till lately in the habit of purchasing oil from the Nittinat also, and have traded in a single season, it is said, as much as 30,000 gallons”. A division into different trades also exists among them. „A portion of them only attain the dignity of whalers, a second class devote themselves to halibut, and a third to salmon and inferior fish, the occupations being kept distinct, at least, in a great measure”¹⁾. Among the Tacullies *hiaqua* shells up to 1810 were the circulating medium of the country²⁾. The Chinooks „were always a commercial rather than a warlike people, and are excelled by none in their shrewdness in bargaining. Before the arrival of the Europeans they repaired annually to the region of the Cascades and Dalles, where they met the tribes of the interior, with whom they exchanged their few articles of trade — fish, oil, shell and Wapato — for the skins, roots and grasses of their eastern neighbours”. „Their original currency or standard of value was the *hiaqua* shell.” They obtain their slaves „by war, or more commonly by trade”³⁾.

This development of trade and industry furthers the growth of slavery in several ways:

a. The slave-trade facilitates the keeping of slaves. Prisoners of war usually belong to a neighbouring tribe; they have much more opportunity to escape to their native country than purchased slaves, who have been transported from a great distance. The latter, if escaping from their masters, would instantly be recaptured by some other slave-keeping tribe of the Pacific Coast. So among the Nootkas „a runaway slave is generally seized and resold by the first tribe he meets”⁴⁾.

b. Where the fishing implements are brought to a high perfection (canoes, nets, harpoons), fishing becomes more remu-

1) Gibbs, p. 175

2) Baneroff, p. 122

3) Ibid, pp. 238—240

4) Ibid, p. 195.

nerative; the produce of a fishing slave's labour exceeds his primary wants more than where fishing is carried on in a ruder manner.

c. The more the freemen devote themselves to trade and industry, the more need there is for slaves to do the ruder work (fishing, rowing, cooking, etc.). The trade itself may also require menial work: carrying goods or rowing boats on commercial journeys, etc.¹).

d. Another effect of intertribal trade, together with a settled life and abundance of food, is probably this, that these tribes are not so warlike as most hunters. So they need not employ all available forces in warfare; they can afford to keep male slaves who do not fight. We have seen that the Koniagas are „adapted to labour and commerce rather than to war and hunting”, and that the Chinooks „were always a commercial rather than a warlike people”. Regarding the other tribes it is not clearly stated, whether war is very frequent²); but our impression, on perusing the ethnographical literature, is, that it is not nearly so frequent as among the Sioux, Ojibways, and similar tribes.

5°. *Property and wealth* are also highly developed. Among the Koniagas „when an individual becomes ambitious of popularity, a feast is given”³). Among the Thinkits private property comprises clothes, weapons, implements, hunting territories and ways of commerce. Nobility depends on wealth rather than on birth⁴). Of the Haidas Bancroft says: „Rank and power depend greatly upon wealth, which consists of implements, wives and

1) Trading itself is not a drudgery, but a highly agreeable occupation. «Most of the Africans» says Livingstone (Zambesi, p. 50) «are natural-born traders, they love trade more for the sake of trading, than for what they make by it» Bucher decidedly underrates the significance of trade among savages

2) So Bancroft (p. 91) says of the Aleuts: «Notwithstanding their peaceful character, the occupants of the several islands were almost constantly at war» This is far from clear for we can hardly imagine peaceful people being always at war with each other

3) Bancroft, p. 84

4) Krause, pp. 167, 122

slaves. Admission to alliance with medicine-men, whose influence is greatest in the tribe, can only be gained by sacrifice of private property." Swan speaks of wooden pillars, placed before the houses of the rich. They are elaborately carved at a cost of hundreds of blankets, and fetch up to 1000 dollars. Only the very rich are able to purchase them ¹⁾. Among the Nootkas „private wealth consists of boats and implements for obtaining food, domestic utensils, slaves, and blankets". „The accumulation of property beyond the necessities of life is only considered desirable for the purpose of distributing it in presents on great feast-days, and thereby acquiring a reputation for wealth and liberality" ²⁾. A wealthy Fish Indian may also win renown by giving away or destroying property ³⁾. Among the Makah „the larger class of canoes generally belong to a single individual and he receives a proportionate share of the booty from the crew" ⁴⁾. Among the Tacullies „any person may become a *muty* or chief who will occasionally provide a village feast" ⁵⁾. Of the tribes of W. Washington and N. W. Oregon Gibbs says: „Wealth gives a certain power among them, and influence is purchased by its lavish distribution." They have pretty clear ideas about the right of property in houses and goods. The men own property distinct from their wives. The husband has his own blankets, the wife her mats and baskets ⁶⁾. Bancroft tells us of the Puget Sound Indians: „I find no evidence of hereditary rank or caste except as wealth is sometimes inherited" ⁷⁾. Among the Chinooks „individuals were protected in their right to personal property, such as slaves, canoes, and implements". Each village was ruled by a chief „either hereditary or selected for his wealth and popularity" ⁸⁾.

3) Mayne, p. 263

4) Gibbs, p. 175.

5) Bancroft, p. 123

6) Gibbs, p. 185, 187

7) Bancroft, p. 217

8) Ibid, pp. 239, 240.

The effects of this development of property and wealth are:

a. Social status depending mainly upon wealth, a slave may be a good hunter or fisher and valued as such, and yet be despised as a penniless fellow.

b. The accumulation of property beyond the necessities of life requires more labour than would otherwise be wanted. Moreover, slaves are the more desired, as the keeping of many slaves is indicative of wealth and therefore honourable

The five causes we have enumerated here are not at work independently of each other. Abundance of food enables a tribe to have fixed habitations, to live in larger groups, to preserve food. Any greater development of trade and industry would be impossible if food were not abundant; for else all time and energy would be occupied by the seeking of food; and a settled life tends greatly to further the growth of industry. Wealth would scarcely exist if there were no trade and industry. The industrial development again facilitates the procuring of food. What is the primary cause of this high state of economic life is not easy to say, and an investigation into this matter falls beyond the scope of the present volume.

It must also be remembered, that this economic state is not only the cause, but also to some extent the effect of slavery.

The development of trade and industry, of property and wealth, is undoubtedly much furthered by slavery. By imposing the ruder work upon slaves, the slave-owner can give more of his time and mind to trade and industry. „Leisure” as Bagehot remarks „is the great need of early societies, and slaves only can give men leisure”¹⁾. And that the keeping of slaves furthers the accumulation of wealth need hardly be said. The slave-trade, which enriches the traders, is even quite impossible where slavery does not exist. Hence we may infer that slavery must already have existed here at a somewhat lower stage of economic life.

On the other hand, there is a circumstance tending to accelerate the growth of slavery on the Pacific Coast. These tribes

1) Bagehot, p. 72

form a somewhat homogeneous group, and have much intercourse with each other. So we may suppose that some of them, that were not yet in such an economic state as spontaneously to invent slavery, have begun to keep slaves, imitating what they saw among their neighbours; the more so, as the slave-trade made this very easy. For our group is not quite homogeneous. The picture we gave of their highly developed economic life does not equally apply to all these tribes. The summer and winter dwellings of the Similkameem are rather primitive. They depend on hunting for a large portion of their food. Trade and industry, property and wealth are not mentioned; it is only stated that at a later period they had horses and cows¹⁾. Niblack tells us that the Tsimshian sold slaves to the Tlinkits and interior Tinneh; but „the last-named had no hereditary slaves, getting their supply from the coast”²⁾. No more particulars are given; but we may suppose that among these interior Tinneh slavery existed in a rather embryonic state, and would not have existed at all but for the slave-trade. The early ethnologists overrated the influence of imitation and derivation of social institutions; but we must not fall into the other extreme and underrate it. An institution may be derived and thereby its growth accelerated, of course within restricted limits.

If the information we have got on the *labour imposed on slaves* were more complete, it would perhaps be better first to survey this information, and thence to infer what place slavery occupies among the tribes of the Pacific Coast. But the statements of our ethnographers regarding slave labour are rather incomplete. A survey of them may, however, be of some use. In the first place it will be seen, whether they can be brought to agree with the exposition given above of the causes of slavery, and, secondly, our survey will perhaps provide us with new valuable data, which may give us a clearer understanding of the significance of slavery on the Pacific Coast.

1) Allison, pp 309, 306, 315

2) Niblack, p. 252

The occupations of slaves mentioned by our ethnographers are the following:

1^o. In a few cases the *slaves strengthen their master's force in warfare*. Aleut slaves always accompany their masters, and have to protect them ¹⁾. „Kotzebue says that a rich man [among the Tlinkits] purchases male and female slaves, who must labour and fish for him, and strengthen his force when he is engaged in warfare” ²⁾. We may suppose that the last part of this sentence applies to male slaves only. Tsimshian slaves guard the house, when the master is absent ³⁾.

This military function of slavery, as we shall see, also exists among several pastoral and agricultural peoples. The industrial part of society, in such cases, is not quite differentiated from the military part. As for the Tlinkits and Tsimshian, the employing of slaves for protecting the master or his property is facilitated by the slave-trade: a purchased slave, brought from a great distance, may be made to fight, where it would not be safe to employ in warfare a slave captured from a neighbouring tribe; for the latter will probably be much inclined to go over to the enemies, who often are his own kindred. But the example of the Aleuts, whose slaves are prisoners of war and their descendants ⁴⁾, shows that even captive slaves may be employed in warfare. We shall not very much wonder at this, if we take into consideration, that prisoners of war are sometimes soon forgotten, and even repelled, by their former countrymen. So „if a Mojave is taken prisoner he is forever discarded in his own nation, and should he return his mother even will not own him” ⁵⁾. The expectation of such treatment may induce captive slaves to fight on their masters' side against their own tribesmen rather than join the latter.

2^o. Slaves are sometimes employed in *hunting, fishing and work connected with fishing*, such as rowing, etc. From a state-

2) Bancroft, p. 108, see also Niblack, p. 252

3) Boas, Die Tsimshian, p. 244

4) Petroff, p. 152

5) Bancroft, p. 499.

ment of Dunn's, quoted by Niblack, we learn that at Fort Simpson, British Columbia (in the country of the Tsimshian) „a full-grown athletic slave, who is a good hunter, will fetch nine blankets, a gun, a quantity of powder and ball, a couple of dressed elk skins, tobacco, vermilion paint, a flat file, and other little articles”¹⁾. And Boas tells us, that Tsimshian slaves row the boats, bring the killed seals to land, and cook them²⁾. Thinkit slaves, as it appears from Kotzebue's above-quoted statement, must fish for their masters. Among the Nootkas „the common business of fishing for ordinary sustenance is carried on by slaves, or the lower class of people; while the more noble occupation of killing the whale and hunting the sea-otter is followed by none but the chiefs and warriors”³⁾.

Dunn's statement about hunting slaves is very valuable. It proves that hunting is here no longer the chief and noble occupation of freemen. Among the Ojibways a good hunter is held in high esteem, not bought at a high price as a valuable slave. What we have said in the last paragraph about hunting not being fit to be performed by slaves, is not impaired by this statement; for hunting among these traders is not the most honoured occupation; moreover, the abundance of game along the Pacific Coast makes it very easy; it does not require nearly so much skill and application as among the Ojibways and similar tribes. This statement also contains a most striking refutation of Bos' assertion, that slavery here exists only as a reminiscence of a hypothetical former agricultural state⁴⁾. If this were true, there might be traces of an ancient slave system; slaves might even still be kept by rich men as a luxury; but the slave's ability in hunting would not enter as a determining factor into his price. Slavery exists here in full vigor, and is not in any way, as Bos will have it, foreign to the economic state in which these tribes live⁵⁾.

1) Niblack, p. 252

2) Boas, *Die Tsimshian*, p. 237

3) Moares as quoted by Bancroft, p. 188

4) See above, p. 172

5) Letourneau also seems to consider slavery foreign to the way of life

What Meares tells us of the Nootkas is also instructive. The drudgery for daily sustenance, fishing, is left to the slaves; whereas the chiefs and warriors reserve to themselves the less productive and (partly therefore) more noble occupation of killing whales and sea-otters. It is remarkable that fishing is carried on by „the slaves or the lower class of people”. Those who cannot afford to buy slaves must themselves perform the drudgery that others leave to slaves. The formation of social classes among freemen is furthered by slavery.

3^o. We are often informed, that slaves do *domestic work*. Tsimshian slaves cook the killed seals and cut wood ¹⁾. Among the Nootkas „women prepare the fish and game for winter use, cook, manufacture cloth and clothing, and increase the stock of food by gathering berries and shell-fish; and most of this work among the richer class is done by slaves”. Our author speaks also of „the hard labour required” from the slaves ²⁾. Among the Ahts slaves serve the family. When a man of rank is going to remove, the new house is prepared in advance by his slaves ³⁾. Among the Fish Indians old women and slaves prepare the food ⁴⁾ Chinook slaves „are obliged to perform all the drudgery for their masters But the amount of the work connected with the Chinook household is never great” ⁵⁾. The last sentence here proves that „drudgery” means household labour.

Some general expressions we find on record with our eth-

of these tribes He has not, however, recourse to a hypothetical former agricultural state, but to the great ethnological *pons asinorum*, derivation (pp 132, 134) But he does not inform us whence slavery can have been derived Perhaps from the inland tribes who, as Letourneau himself proves to be aware, have no slaves? Or from the Siberians, who are rather in a lower than in a higher economic state as compared with the Indians of the Pacific Coast? Or from the Hindus or any other mythical early visitors of America?

4) Mayne, p 253

5) Bancroft, p 240,

nographers seem to bear the same meaning. For instance Tlinkit slaves, according to Kotzebue (quoted above), must „labour” for their masters; and Niblack, evidently referring to the same statement, says that „slaves did all the drudgery” ¹⁾. The Tacullics use their slaves „as beasts of burden”, which perhaps also means imposing household labour upon them ²⁾. And Niblack remarks about the Coast Indians of Southern Alaska and Northern British Columbia in general. „When slavery was in vogue, this class performed all the menial drudgery” ³⁾.

It is remarkable, that slaves in so many cases are stated to perform household, i. e. female, labour. These statements are even more numerous than those about fishing and similar work; so it would seem (we may not speak more positively, as our materials are rather scanty), that household labour is the chief occupation of slaves along the Pacific Coast. Now it is easy to understand, that fixed habitations and the preserving of food for winter use require a large amount of domestic labour. But this does not solve the question, why slaves are employed for this work; why the men purchase or capture slaves not for their own private use, but in order to relieve their wives of a part of their task. In Australia women are overworked, and beaten into the bargain; why are the men of the Pacific Coast so anxious to give the women assistance in their labour?

It might be, that female labour is valued by the men, because articles of trade are prepared by the women. Unfortunately our ethnographers most often content themselves with remarking that a brisk trade is carried on, or that some tribe is commercial rather than warlike, without specifying the articles of commerce. Yet a few statements tend to verify our hypothesis. The articles of trade of the Chinooks before the arrival of the Europeans were fish, oil, shells and Wapato

1) Niblack, p. 252

2) Bancroft, p. 124

3) Niblack, p. 253

„The Wapato, a bulbous root, compared by some to the potato and turnip, was the aboriginal staple, and was gathered by women”¹⁾. „Dried and pounded salmon, prepared by a method not understood except at the falls, formed a prominent article of commerce, both with coast and interior nations”²⁾. And as we are told that „the women prepare the food which the men provide”³⁾, the trade proves to depend largely on female labour. The Tlinkits export to the interior basket-work, dancing clothes, train-oil prepared from the *ssag* (a kind of fish), a sort of cakes made of *Alaria Esculenta* (a sea-weed). The women manufacture basket-work, dancing clothes, moccasins and other clothes. In the fishing season they are from morning to night engaged in preparing the fish. In the autumn they gather berries, bark, leaves and other vegetable by-meats; in other seasons they gather shells and sea-urchins on the beach⁴⁾. Here all articles of trade are products of female labour. Among the Ahts baskets and mats, manufactured by the women, are sold; the women may keep the proceeds, and also get a little portion of their husbands’ earnings. Our informant, speaking of the several divisions of the Ahts mutually exchanging the fish that each of them catches, probably also means fish prepared by the women⁵⁾. In W. Washington and N. W. Oregon the *kamas*, a root which was „formerly a great article of trade with the interior,” is dug by the women⁶⁾. What articles are exported by the other tribes we do not know.

There is another fact strengthening our hypothesis: women are often consulted in matters of trade. Among the Tlinkits „the men rarely conclude a bargain without consulting their

6) Gibbs, p 193

wives" ¹⁾. Nootka wives too „are consulted in matters of trade" ²⁾. About Puget Sound the females „are always consulted in matters of trade before a bargain is closed" ³⁾. And Chinook women „are consulted on all important matters" ⁴⁾, which matters, among these commercial people, necessarily include the trade.

This need not, however, be the only cause; for women here enjoy a rather high position; so it might be that the men wish to alleviate the task of their wives, quite apart from the occupation of the latter in preparing the articles of commerce. Aleuts, if not addicted to drinking, are good husbands, and help their wives in everything ⁵⁾. Among the Tlinkits, according to Krause, „woman's position is not a bad one. She is not the slave of her husband; she has determinate rights, and her influence is considerable" ⁶⁾; and Bancroft remarks that „there are few savage nations, in which the sex have greater influence or command greater respect" ⁷⁾. Nootka wives „seem to be nearly on terms of equality with their husbands, except that they are excluded from some public feasts and ceremonies" ⁸⁾; and Sproat tells us that among the Ahts slaves only are prostituted; women are not badly treated; a wife may leave her husband with the consent of her relatives ⁹⁾. In W. Washington and N. W. Oregon, according to Gibbs, „the condition of the woman is that of slavery under any circumstances." But the particulars he gives prove that the women here are not so very badly off. In their councils „the women are present at, and join in the deliberations, speaking in a low tone, their words being repeated aloud by a reporter.

9) Sproat, p. 95.

On occasions of less ceremony, they sometimes address the audience without any such intervention, and give their admonitions with a freedom of tongue highly edifying. In a few instances, matrons of superior character, „strong minded women”, have obtained an influence similar to that of chiefs.” The men own property distinct from their wives. „He has his own blankets, she her mats and baskets, and generally speaking her earnings belong to her, except those arising from prostitution, which are her husband’s.” Sometimes „the courtship commences in this way — the girl wishing a husband, and taking a straightforward mode of attracting one.” „The accession of a new wife in the lodge very naturally produces jealousy and discord, and the first often returns for a time in dudgeon to her friends, to be reclaimed by her husband when he chooses, perhaps after propitiating her by some presents” ¹⁾. Yet the condition of women seems not to be quite as good as among the other tribes. „A man sends his wife away, or sells her at his will.” „An Indian, perhaps, will not let his favourite wife, but he looks upon his others, his sisters, daughters, female relatives, and slaves, as a legitimate source of profit” ²⁾. But we must take into consideration, that Gibbs gives a general description of inland tribes and coast tribes together. That among the latter the condition of women is not so very bad, is proved by Bancroft’s statements about the tribes on Puget Sound and Chinooks. About Puget Sound „women have all the work to do except hunting and fishing, while their lords spend their time in idleness and gambling. Still the females are not ill-treated; they acquire great influence in the tribe” ³⁾. And among the Chinooks „work is equally divided between the sexes. . . . Their [women’s] condition is by no means a hard one. It is among tribes that live by the chase or by other means in which women can be of little service, that we find the sex most oppressed and cruelly

1) Gibbs, pp. 198, 185, 187

2) Ibid., p 199

3) Bancroft, p 218.

treated' ¹⁾). The Tacullies „are fond of their wives, performing the most of the household drudgery in order to relieve them” ²⁾ Mackenzie, speaking of an Indian tribe, probably related to the Atnahs on Fraser River, amongst whom strangers are kept „in a state of awe and subjection,” states that they live upon the products of the sea and rivers and are to be considered as a „stationary people” „Hence it is that the men engage in those toilsome employments, which the tribes who support themselves by the chase leave entirely to the women” ³⁾

Our information, here again, is not very complete, but as far as it goes it tends to prove that the condition of women on the Pacific Coast is not a bad one

This good condition of women here, as compared with for instance that of Australian women, may for a great part be due to the settled life of these tribes. While the men are on fishing, hunting, or trading expeditions, the women enjoy much liberty, whereas Australian women are continually marching along with their husbands ⁴⁾ The men must also be aware that domestic comfort, worth much in these cold regions, depends on the women. As militarism does not prevail here to any great extent, women are not so much in need of male protection. And village life makes conspiracy of women possible. So among the Aleuts „a religious festival used to be held in December, at which all the women of the

1) *Ibid.* p. 242

2) *Illiott* p. 164

3) *Mackenzie II* p. 268

4) A writer of the 18th century tells us of the women of the Dutch isle of Ameland (the men being fishers and mariners) „They are generally somewhat imperious and by their foolish cleanliness most men are hardly ever allowed to have a fire on the grate during winter time. The cause of this imperious behaviour of Ameland women is not difficult to detect as the men are at home only in the winter the women rule for the greater part of the year and are not inclined to part with their authority in winter-time. Therefore most men so to speak board at their wives' and if they want to keep peace have to put up with female ascendancy. *Tegenwoordige Staat der Vereenigde Nederlanden XIV* pp. 363, 364

village assembled by moonlight, and danced naked with masked faces, the men being excluded under penalty of death" ¹⁾). Last but not least, the preparing and preserving of food for the time of scarcity makes subsistence largely dependent on female labour.

We have only enumerated some causes tending to bring about a good condition of women. It is not the place here to expatiate upon this point any further. But it is worth while to emphasize the fact itself, that women are on the whole well treated among these tribes. A German writer, Dr. Grosse, has recently tried to prove, that among the „higher hunters” (*hohere Jager*) as well as among the „lower hunters” (*niedere Jager*) woman's state is a bad one. As all our tribes belong to Grosse's „higher hunters” ²⁾, we shall attempt to find out, why his conclusion is so diametrically opposed to ours. He quotes several ethnographical statements, which are to afford a basis for his inference ³⁾. We shall examine whether this is a sound basis. Grosse does not always exactly specify which tribe each quotation applies to; but as he most frequently quotes Bancroft, we can easily find it out. He first quotes this statement of Bancroft's about the Shoshones: „The weaker sex of course do the hardest labour, and receive more blows than kind words for their pains” ⁴⁾. But the very next sentence: „These people, in common with most nomadic nations, have the barbarous custom of abandoning the old and infirm the moment they find them an incumbrance,” which Grosse does not quote, shows that these Shoshones are not at all to be compared to the Tlinkits and similar tribes; their mode of life is decidedly rude and little comfortable. Then he refers to some passages of Bancroft's, proving that unfaithfulness of the wife is punished with death, whereas the husband has the right to prostitute his wife to strangers. These passages

1) Bancroft, p. 93

2) Grosse, p. 65

3) Ibid., pp. 74—78

4) Bancroft, p. 437

apply to the Southern and Northern Californians as well as to the Shoshones. But about the former it is also stated: „If a man ill-treated his wife, her relations took her away, after paying back the value of her wedding presents, and then married her to another” ¹⁾. And of the Northern Californians we are told: „Among the Modocs polygamy prevails, and the women have considerable privilege. The Hoopa adulterer loses one eye, the adulteress is exempt from punishment” ²⁾. Moreover, „although the principal labour falls to the lot of the women, the men sometimes assist in building the wigwam, or even in gathering acorns and roots” ³⁾. Another statement of Bancroft’s, quoted by Grosse, applies to the Chepewyans: „The Northern Indian is master of his household. He marries without ceremony, and divorces his wife at his pleasure. A man of forty buys or fights for a spouse of twelve, and when tired of her whips her and sends her away” ⁴⁾. This statement is corroborated by a report of Hearne’s. But why Grosse calls the Chepewyans „higher hunters” we do not understand. „Altogether they are pronounced an inferior race.” „The Chepewyans inhabit huts of brush and portable skin tents.” „Their weapons and their utensils are of the most primitive kind” ⁵⁾. The next quotation applies to the Kutchins, whose wives „are treated more like dogs than human beings.” But this is only stated of the Tenan Kutchin, „people of the mountains,” „a wild, ungovernable horde, their territory never yet having been invaded by white people.” „The Kutcha Kutchin, „people of the lowland,” are cleaner and better mannered.” And of these „better mannered” Kutchins Bancroft says: „The women perform all domestic duties, and eat after the husband is satisfied; but the men paddle the boats, and have even been known to carry their wives ashore, so that

1) Ibid., p. 412

3) Bancroft, p. 351

4) Ibid., p. 117

5) Ibid., pp. 117—119.

they might not wet their feet" ¹⁾). As for the Nootkas, women being „somewhat overworked" (Grosse does not mention that among the richer class most female work is done by slaves), and excluded from some public feasts, Grosse concludes that their state is a bad one. We have quoted above some facts proving the contrary. Then Grosse asserts that, according to Bancroft, Haida husbands prostitute their wives for money. Bancroft, however, says literally: „While jealousy is not entirely unknown, chastity appears to be so, as women who can earn the greatest number of blankets win great admiration for themselves and high position for their husbands" ²⁾); which is not exactly the same. The Thinkits, according to Grosse, are the only, unaccountable exception to his general rule. Finally he attempts to prove, that the alleged gynecoeracy in Kamtschatka does not signify so very much; but that Kamtschadale women are badly treated, even he does not assert.

What remains now of Grosse's evidence? Thinkit and Kamtschadale women be himself admits not to be badly off. What he says of Nootkas and Haidas proves nothing at all. About the Northern and Southern Californians we have got statements that impair Grosse's argument very much. Only among the Shoshones, Chepewyans, and Tenan Kutchin is the state of women decidedly bad; but these are not on a level with the other tribes; they are migratory and little advanced in the arts of life. And of the Tenan Kutchin we know very little, „their territory never yet having been invaded by white people" ³⁾).

Grosse derives most of his evidence from Bancroft's book; but he uses it in a rather strange way. Sometimes he quotes one sentence, where two successive sentences taken together would give quite another view of the matter. Several state-

1) Ibid., pp. 131, 132.

2) Ibid., p. 169

3) Some other writers, however (whom Grosse does not refer to), speaking of the Kutchins in general, state that women are badly treated, see Kirby, p. 419, Hardisty, p. 312, Jones, Kutchin tribes, p. 325

ments of Bancroft's (such as about the tribes on Puget Sound, Chinooks, Tacullies) he omits altogether; whereas just the tribes of the N. W. Coast of North America are, according to him, among the most typical „higher hunters”¹⁾. And he can only give a semblance of truth to his inference by classifying under „higher hunters” Shoshones and similar tribes, which are not more advanced in the arts of life than some Australians, and decidedly much less than the Eskimos and Aleuts whom he calls „lower hunters”. This is not the way in which a sociological investigation should be carried on.

Returning to our chief subject, we may remark, that our survey of slave labour leads to the same conclusion we arrived at before, viz. that the preserving of food, a settled life, and the high development of trade, industry and wealth, are the main causes which have brought about, that slavery so largely prevails here. As additional causes we may now name the high position of women, which induces the men to relieve them of a part of their work by giving them the help of slaves; and, in a few cases, the want of fighting men, who are to strengthen their masters' force in warfare.

We shall now briefly examine, which are the causes of slavery among the slave-keeping hunters and fishers outside the Pacific Coast

Among the *Abipones* the function of slavery is beyond any doubt reinforcement of the tribe. The slaves are very leniently treated. „I know of many people” says Dobrizhoffer, „who, being released by their friends and brought back to their native country, voluntarily returned to their masters, the Abipones, whom they follow in their hunting and fighting expeditions; though Spaniards themselves, they do not hesitate to stain their hands with Spanish blood.” „The liberty to go where they like, the abundance of food and clothing procured without any labour, the possession of many horses, the freedom to idle and run into debauchery, the lawless impunity they enjoy, bind the Spanish captives so much to the Abipones, that they

1) Grosse, p. 65

prefer their captivity to liberty." „The Abipones, though considering polygamy allowed, very seldom take several wives at a time; the captives do not often content themselves with one wife, but marry as many female prisoners, Spanish or Indian, as they can" ¹⁾).

The reason for taking prisoners here is the same as among the Iroquois and similar tribes, where they are adopted; with this sole difference, that the Abipones seem to have a sexual aversion (that cannot be accounted for here) to all men and women outside their own people; therefore they do not adopt their prisoners, nor have they any sexual connection with them. Slavery as a system of labour does not exist here.

As for their economic life, this is much inferior to that on the Pacific Coast. They subsist on the spontaneous products of nature and on game. Food is abundant; yet their mode of life requires frequent migrations. All their journeys are performed on horseback ²⁾).

The information we get about the *Tehuelches* is not very clear. Falkner states, that the female relatives of the cacique have slaves, who perform most of their labour ³⁾). According to Featherman, in their wars they spare „only the young girls to make them their wives, and the children to serve as slaves in their household, and as herdsmen to guard their cattle and horses" ⁴⁾). But none of the other ethnographers we have consulted make any mention of cattle. The confusion is augmented by Charlevoix telling us that the *Tehuelches* grow some corn ⁵⁾). And Musters makes no mention of slavery. So we cannot arrive at any definite conclusion.

In *Kamtschatka* slaves were employed for various domestic labours, such as fetching wood, feeding the dogs, making axes and knives from stone and bone ⁶⁾). The *Kamtschadales* were

6) Steller, p. 235 note.

not so far advanced in the arts of life as the tribes of the Pacific Coast. They think only of the present, says Steller; they are not ambitious to become rich. They do not like to work more than is needed for their own and their families' subsistence. „When they have got as much as they think to be sufficient, they do not collect any more food; they would not even do so, if the fish came on land and the animals into their dwellings." A rather brisk trade was, however, carried on by them and was largely dependent on female labour ¹⁾. They also had fixed habitations ²⁾.

Speaking of the tribes of the Pacific Coast, we concluded that slavery must have already existed among them at a somewhat lower stage of economic life. The Kamtschadales afford a proof of this. They were not so far advanced in the arts of life as the tribes of the Pacific Coast; yet slavery already existed among them, though it does not seem to have prevailed here to any great extent.

§ 3. *Experimentum crucis: Australia.*

In the last paragraph we have shown that in the economic and social life of the slave-keeping hunters and fishers (especially those on the Pacific Coast) there are some features which account for the existence of slavery. But there is still something wanting in our argument. It might be that the circumstances which we have called causes of slavery were equally found among the hunting and fishing tribes that do not keep slaves; in that case the foregoing argument would prove false. Therefore we shall apply here the *experimentum crucis*; we shall attempt to prove that the economic and social life of the slave-keeping tribes differs from that of the other tribes in several respects. This investigation, besides corroborating the conclusion we have arrived at in the last paragraph, may be instructive in another way. It might be, that of the supposed

1) Ibid, pp 245, 286, 286 note, 317, 318

2) Ibid, pp 210 sqq

causes of slavery some were found among non-slave-keeping as well as among slave-keeping tribes, whereas others existed among none but slave-keeping tribes; then the latter causes only would be decisive. Or perhaps we shall find that each of these causes exists among one or more non-slave-keeping tribes; but that the combination of all the causes is found nowhere but among slave-keeping tribes. It were also possible, that a combination of the same causes existed among non-slave-keeping tribes, but that among these there were other circumstances neutralizing the former. Whether any of these possibilities is a reality, will appear from the ensuing investigation.

We do not, however, think that it is necessary to give a survey of the economic and social life of all non-slave-keeping hunters and fishers. For we have seen that among the tribes of the Pacific Coast the growth of slavery is much furthered by their forming a somewhat homogeneous group. Accordingly slavery among the few slave-keeping tribes outside the Pacific Coast seems to be little developed. Now there are many non-slave-keeping hunting and fishing tribes, either living quite isolated (e. g. Andaman Islanders, Fuegians) or surrounded by mightier, agricultural or pastoral, tribes (e. g. Bushmen, African pigmies, Negritos). That such a position is very unfavourable to the existence of slavery is evident. We shall therefore confine ourselves to a survey of the three great groups of hunters and fishers outside the Pacific Coast: the Australians, the Indians of Central North America, and the Eskimos. Australia and the regions where the Eskimos live are inhabited by hunters and fishers only. In Central North America a few agricultural tribes of the lowest stage (hunting agriculturists) are found; but these differ so little from hunters proper, that we may speak here of a group of hunters, not inclosed between superior peoples. Perhaps the hunters and hunting agriculturists of Brazil, Paraguay, etc. form a similar group; but the literature on these tribes accessible to us was rather scanty.

We shall inquire now, whether the several circumstances

furthering the growth of slavery on the Pacific Coast, are found among each of these groups.

In the first place we shall regard *Australia*.

1°. *Abundance of food*. Food in Australia is by no means abundant and often very scarce. The Australians are omnivorous in the widest sense of the word; they eat even mice, rats, lizards, beetles, etc. In some parts of Australia, especially on the West Coast and in the interior, the natives are continually suffering from hunger¹). We shall soon see that scarcity of food compels them to live in very small groups.

2°. *Variety of food*. There is a great variety. Concerning S. W. Australia Gerland enumerates 6 kinds of kangaroos, 29 of fish, two of seals; and further wild dogs, emus and other birds, tortoises, opossums, frogs, shell-fish, grubs of beetles, bird's eggs, mice, rats, snakes and lizards; roots, mushrooms, resins and various fruits²). But this list, including (as Gerland remarks) everything eatable, proves only that they live very poorly. And as for fishing, though fish enters for a large part into the subsistence of the coast tribes, there are no fishing tribes in the higher sense in Australia, like those of the Pacific Coast. Their canoes, where they have any, are very primitive; and the principal means of catching fish are by spearing and setting traps³).

3°. *Fixed habitations, large groups, preserving of food*. Gerland states that to find sufficient food, the Australians must continually roam over the country. These wandering tribes cannot be large, else food would fail them; so the division of the Australians into numerous small tribes is a consequence of the nature of their country⁴). And Brough Smyth remarks: „It is necessary for a tribe to move very frequently from place to place, always keeping within the boundaries of the country which it calls its own —, now to the spot where eels

1) Waitz-Gerland, VI pp 724, 725

2) L. c.

3) Ibid., pp. 732, 733, 738

4) Ibid., p. 722

can be taken in the creeks; often to the feeding-grounds of the kangaroo; sometimes to the thicker forests to get wood suitable for making weapons; to the sea-coast continually for fish of various kinds; and, at the right season, to the lands where are found the native bread, the yam, and the acacia gum" ¹⁾ The writers who describe separate tribes also often state that these tribes are nomadic and live in small groups. We shall quote here only the statements of our ethnographers concerning one significant fact, that presents a striking contrast to the state of things on the Pacific Coast, viz. the improvidence of the Australians. In the Moore River District of W. Australia food is abundant in the summer; but the natives are reckless of the future; they consume whatever they have got. The natives of S. W. Australia preserve no food; if the game killed is too much for a family to eat in one day, neighbouring families are invited and a feast is given, till nothing is left. They do, however, store up acacia gum, and carry roots with them. The Queenslanders on Herbert River think only of the present moment. The Cammarray of N. S. Wales eat as long as they have anything; they never lay up provisions, except when a dead whale has been cast on shore. Of the aborigines of N. S. Wales in general Fraser tells us: „When the fish are abundant, the fishers cannot use a tithe of the fish they catch, and so sell them to all comers at a few pence for a backful. As for themselves, they have a noble feast, they and all their tribe; and, as is their habit whenever they have abundance, they gorge themselves so that their bodies are swollen to unnatural dimensions and seem ready to burst. When they can hold no more, they go to sleep like snakes, and sleep for twenty-four hours or more." Similar particulars are given by Angas. As for the Tasmanians: „They lay up no store of provisions, and have been known in winter time to eat kangaroo skins" ²⁾. Matthews, speaking of several

1) Brough Smyth, I p. 123

2) Literature: On the Moore River District Oldfield, on S. W. Australia Salvado, on the natives on Herbert River Lumholtz, on the Cammarray

tribes of Queensland and South Australia, states that they „are very improvident, and accumulate no property beyond their weapons and rugs”¹⁾. And Forrest tells us that the natives of Central and Western Australia „live from hand to mouth, never collect more than enough for the day, and each morning have to look out for their day’s food”²⁾.

4°. *Trade and industry*. Bartering is not at all unknown among the Australians. Fraser, speaking of N. S. Wales, remarks: „I have already spoken of pipe-clay and ruddle as articles of trade; the Mindi-mindi gatherings are the markets at which this trade is carried on. The necessity for these fairs is not far to seek. A black man’s own „taurai” does not furnish everything he requires for his daily life. In it there may be food enough, but he wants suitable stone for an axe, wood for his spears, and „bumerangs” and shields and clubs, flint for cutting and skinning, gum to be used as cement, and lumps of gritty sandstone, on which to sharpen his stone-axe; for adornment, the pipe-clay and the red-ochre are much valued, and so are swan-down feathers and the rose-coloured crests of a certain kind of cockatoo; some of these he can supply, and for them he gets in barter others that he wants. Then also there are manufactured articles which he can give in exchange, — cloaks, rugs, baskets, knitted bags, nets, weapons, and tools; most of these articles bear the „brand” of the maker. In this way the black man’s wants are supplied by the mutual interchange of commodities. I suppose that, at these fairs, the usual amount of haggling goes on in the making of bargains, but there is no quarrelling; for, during the time, universal brotherhood prevails. The fairs are held whenever there is a need for them”³⁾ Intertribal commerce

Collins, on N. S. Wales Fraser and Angus, on the Tasmanians Ling Roth

2) Forrest, p. 318

3) Fraser, p. 67 „Taurai” is the land owned by a tribe or a division of a tribe, see *ibid.*, p. 36.

is also carried on by the Narrinyeri and Dieyerie¹⁾. It seems, indeed, that there is hardly any savage tribe, among which the interchange of commodities is quite unknown. And in N. S. Wales it is not only the spontaneous products of nature that are exchanged, but manufactured articles, so the trade requires industry. Yet trade and industry are not nearly so fully developed here as on the Pacific Coast. Nowhere are there particulars given, showing that any Australian tribe is, like the Koniagas of the Pacific Coast, „adapted to labour and commerce rather than to war and hunting.” On the Pacific Coast the coast tribes exchange their manufactured goods for the raw products of the hinterland; but in Australia there is nothing but hinterland.

That trade and industry do not signify nearly so much as on the Pacific Coast is clearly proved by their not having here the same effect; they have not led in Australia to any development of:

5^o. *Property and wealth*. Dr. Steinmetz, in his *Entwicklung der Strafe*, has closely studied the forms of government existing among the Australian natives. From the details he gives it appears, that a man's influence depends on his age, his bravery, eloquence, etc., and his having numerous relatives, but not on his wealth. Among the Queenslanders described by Lumboltz the old men have most influence. Among the Kurnai age, rather than bravery, gives influence. In Central Australia a man's power depends chiefly on his age, but also on force, courage, prudence, dexterity, perseverance, and the number of his relatives. On the Bourke and Darling rivers the council of old men is the only form of government. In Tasmania a man's influence depended on his strength, courage, perseverance, prudence, and dexterity. The old men were highly honoured and had many wives. In the Wellington tribe there is no government whatever; all are equal. Among the Cammarray the old men are chiefs. Among the Narrinyeri chieftainship is elective; wisdom, moderation, and good humour

1) Steinmetz, *Strafe*, II pp 27, 29

are the qualities most required in a chief. Among the Dieyerie the oldest man of the clan is chief, but has not always most power. A chief has real power only when, besides his age, he has other valued qualities, such as bravery, eloquence, or a large family. Great warriors, orators and sorcerers have most influence. In the Moore River District there is no government, a perfect equality prevails. The natives of Port Lincoln have no government; old people are held in high esteem. In the Western District of Victoria „the succession to the chieftom is by inheritance”. „The eldest son is appointed, unless there is some good reason for setting him aside.” If the heir is weakly in body or mentally unfitted to maintain the position of chief, — which requires to be filled by a man of ability and bravery, — and has a better-qualified brother, he must give way to the latter or fight him in single combat. Among the tribes of Victoria described by Le Souef government in the true sense does not exist, but the bravest and strongest, and often the most dangerous men, have most influence¹⁾. Some other statements not given by Steinmetz (dating from recent times, after his book was published) lead to the same conclusion. In N. W. Central (Queensland „a ripe old age constitutes the highest social status in the camp, and the one calling for the greatest respect. There is no single individual chief to direct affairs”²⁾). In N. S. Wales, according to Fraser, „there is nothing of the nature of kingly rule in any one of the tribes, nor is there an over-chief for the whole of a tribe; but the affairs of each section of a tribe are administered by a number of elders, among whom one man is considered the leader or chief, because of his superior wisdom and influence”. „If there are two rivals competing for the chiefship, they settle the matter by single combat”³⁾. Among the Dieyerie chieftainship is elective according to the influence of the candidate's clan and his oratorical power⁴⁾. About Powell's Creek

2) Roth, p 141.

3) Fraser, pp 38, 39

4) Gason in Fraser's Notes, p 173

there is no government whatever; „the oldest man in the tribe would usually carry most sway in tribal matters”¹⁾. Matthews, speaking of several tribes of Queensland and South Australia, remarks: „They have elders or chiefs corresponding with the Indian Medicine men, who I believe are principally self-constituted, or admitted as such on the score of age or personal prowess. Great respect is attached to age as a rule, especially in visiting another tribe”²⁾. A describer of the natives of North Australia tells us: „There are no recognized chiefs in a tribe in the true sense of the word, as far as I have come in contact with them; the old men of each tribe form themselves into a sort of council when anything of importance is to be discussed, and what they decide upon is generally carried out”³⁾. Finally we may add Brough Smyth’s statement about the Australians in general: „The government of aboriginal tribes is not a democracy. There are the doctors or sorcerers who, under some circumstances, have supreme power; there are the warriors who in time of trouble are absolute masters; there are the dreamers, who direct and control the movements of the tribe until their divinations are fulfilled or forgotten; there are the old men (councillors) without whose advice even the warriors are slow to move; and, finally, there are the old women, who noisily intimate their designs and endeavour by clamour and threats to influence the leaders of their tribe”⁴⁾.

We see that influence and power in Australia depend on personal qualities, not on wealth. We have only found two instances on record of men trying to strengthen their influence by means of their property. Gason tells us of a celebrated Dieyerie chief, who received regular tributes from the hordes

1) The Stationmaster in Frazer’s Notes, p 179

2) Matthews in Frazer’s Notes, p 189.

3) Foelsche in Frazer’s Notes, pp 196, 197

4) Brough Smyth, I p 126. The ethnographers give many more details regarding tribal government, but we have only quoted those that bear directly on the question at issue, i e that show on what qualities influence and power depend.

under his control. The writer often observed him distributing presents among his personal friends, in order to avoid their jealousy¹⁾. But this is quite another thing than what we found existing on the Pacific Coast. In the latter group a rich man, by being rich, attains to power, whereas here the chief, elected for his personal qualities, receives tributes, and by distributing what he has received strengthens his influence. Moreover we are told that these Dieyerie „have no property except a few weapons or ornaments; they are generally burned or destroyed”, viz. after their owner's death²⁾. Lumboltz speaks of an old man in Queensland who distributed his property among his fellow-tribesmen to attain to greater influence³⁾. This looks somewhat like the state of things existing on the Pacific Coast, but as the same writer tells us that there is no government except the council of old men, this may be an isolated case. And even if among one or two tribes wealth gave a certain influence, this would not impair the conclusion we have arrived at, that generally a man's influence and power do not depend upon his wealth, whence we may infer that wealth and property are little developed here.

6^o. *Condition of women*. Whereas on the Pacific Coast women are held in rather high esteem, and therefore provided by the men with slaves who help them in their work, the condition of women in Australia is decidedly bad, as we have seen in the first Chapter of Part I⁴⁾.

7^o. *Militarism*. We have shown that slaves are sometimes taken in order to strengthen their masters' force in warfare. On the other hand, where militarism does not prevail to any considerable extent, the tribe can afford the luxury of having male slaves living among them who do not fight. As for the Australians, their wars generally are not bloody, and often settled by single combat⁵⁾.

4) See above pp. 9—22

5) Steinmetz, *Stiafc*, II pp. 3 sqq.

Our conclusion is that the Australians differ from the tribes of the Pacific Coast in many respects. Food is by no means abundant; the highly developed fishing methods of the Pacific Coast are unknown here; the Australians are migratory and improvident, and live in small groups; though some tribes interchange commodities, trade and industry do not signify nearly so much as on the Pacific Coast; the objects of property are very few and wealth does not exist; the condition of women is a bad one. Only in two respects both groups agree: there is a great variety of food, and militarism does not prevail to any great extent. We have seen, however, that „variety of food” here means that the Australians must avail themselves of whatever is eatable, i. e. that they live in the deepest misery. Therefore henceforth we shall no more speak of variety of food as a circumstance favourable to the existence of slavery; and in the next paragraphs we shall not inquire whether the Central North Americans and Eskimos have variety of food.

§ 4. *Experimentum crucis Central North America.*

This paragraph will contain a survey of the economic state of the group of hunting tribes, extending across North America, from the Montagnais near the Atlantic Coast to the Apaches of Texas. Besides hunters in the proper sense this group includes the Cheyennes and Comanches, who, though slight traces of agriculture are found among them, subsist almost entirely on the products of the chase.

1^o. *Abundance of food.* Le Jeune, speaking of the Montagnais, says: „The savages are almost always hungry” ¹⁾. The Chepewyans „are not remarkable for their activity as hunters, owing to the ease with which they snare deer and spear fish” ²⁾. Among the Kutchins a good hunter can always, except in very unfavourable circumstances, procure sufficient

1) Jes. Rel., VI p. 277

2) Mackenzie, I p. 151.

food¹⁾. The Beaver Indians, according to Mackenzie, seemed to live in a state of comparative comfort²⁾. The Comanches in the summer, when the buffaloes remove to the North, often suffer from want of food³⁾. Grinnell, speaking of the inland Indians in general, remarks: „The life of the Indian was in some respects a hard one, for the question of food was an ever-present anxiety with him”⁴⁾.

Considering the foregoing statements, and remembering Tanner's narrative that gives a description of a continual struggle for mere existence, we may safely conclude that, though a few of these tribes live rather comfortably, food, among the Indians of Central North America in general, is not nearly so abundant as on the Pacific Coast.

2^o. Whereas the tribes of the Pacific Coast subsist chiefly by *fishing*, the Indians of Central North America are, nearly all of them, hunters (See § 2 of this Chapter).

3^o. *Fixed habitations, large groups, preserving of food*. The Montagnais, in Le Jeune's time, were wandering and few in number; their life consisted of feasting as long as they had anything; they lived from hand to mouth and did not lay up any provision⁵⁾. The same writer calls the Algonquins a wandering tribe⁶⁾. The Ojibways, according to Keating, are divided into small groups, each containing a few families. They do not lay up any provision for winter use. Jones also remarks, that they are very improvident⁷⁾. The Knisteneaux often, at one feast, consume what would have been enough for several weeks⁸⁾. The Blackfeet tribes are nomadic in their habits⁹⁾. Ross tells us, that the Eastern Tinnch „are obliged to lead a

wandering life, in order to procure food either by fishing or hunting" ¹⁾). The Indians on the Upper Yukon are very improvident. When fish is abundant, they gorge themselves with it, instead of drying it for winter use ²⁾). The Kutchins live in transportable dwellings. According to Kirby they „are divided into many petty tribes". Hardisty, however, states that they generally live in large groups ³⁾). Mackenzie speaks of a Beaver Indian establishment of about 300 inhabitants ⁴⁾). The Sioux live in small bands, owing to the scarcity of game ⁵⁾). The Osages are nomadic. Our informant speaks of an Osage town of 1500 inhabitants ⁶⁾). Apache tribes of 100—200 people, of whom 25—50 are warriors, are headed by a captain. They are „nomadic and roving in their habits". „Seldom do they remain more than a week in one locality" ⁷⁾). The Comanches „usually roam in small subdivisions, varying according to caprice or the scarcity or abundance of game". These subdivisions consist of 20—110 families. Bancroft remarks about the Comanches: „No provision is made for a time of scarcity, but when many buffalo are killed, they cut portions of them into long strips, which, after being dried in the sun, are pounded fine. This pemican they carry with them in their hunting expeditions, and when unsuccessful in the chase, a small quantity boiled in water or cooked with grease, serves for a meal" ⁸⁾). These details do not quite agree with Bancroft's assertion that „no provision is made". Grinnell remarks, that the Indians are often undeservedly taxed with improvidence. „We are told in books much about the Indian's improvidence, and it is frequently stated that however abundant food might be with him to-day, he took no thought for the needs of the

morrow. Such statements are untrue and show but superficial observation. The savage does not look so far ahead as does the civilized man, but still the lessons of experience are not wholly lost on him. He remembers past hardships, and endeavours to provide against their recurrence; and these people were rather remarkable for their foresight, and for the provision which they were accustomed to make for the future" ¹⁾).

However this may be, it is evident that the supplies these wandering tribes (as they subsist on hunting, we may safely suppose that they are all of them nomadic, whether this be explicitly stated or not) were able to store for winter's use, cannot compare with those of the tribes of the Pacific Coast.

4^o. *Trade and industry*. The Montagnais, in Le Jeune's time, bought maize from the Hurons for elk-skins ²⁾. The Algonquins, according to the same writer, used to sell furs to the French ³⁾ The Blackfeet tribes sell peltries which they procure in the Northern part of their country ⁴⁾ Jones calls the Kutchia Kutchin traders: „they make very little for themselves, but buy from the other Indians." And Hardisty tells us, that they live by trading; they exchange beads, which are their circulating medium, for the peltries of other tribes ⁵⁾. The Osages, too, carried on the fur-trade in Hunter's time ⁶⁾.

We see that trade does not hold a large place in the economic life of these Indians; and that only raw products are exchanged.

Grinnell enumerates the branches of industry existing among them. „Food supply and defence against enemies depended on the warrior's weapons. These were his most precious possessions, and he gave much care to their manufacture. Knowing nothing of metals, he made his edge tools of sharpened stones." „The most important part of the warrior's equipment was the

6) Hunter, *Gedenkschriften*, p. 50

bow, and over no part of it was more time and labour spent." „The stone axe, the maul, and the lance were all simple weapons." „A very important part of the warrior's outfit was the shield, with which he stopped or turned aside the arrows of his enemy. It was usually circular in shape, and was made of the thick, shrunken hide of a buffalo bull's neck." „Clothing was made of skins tanned with or without the fur." „Many tribes — especially those to the south — made a simple pottery ... Among the northern tribes, where pottery was least known, ladles, spoons, bows, and dishes were usually formed from horn or wood". „The different tribes had but slight knowledge of the textile art, and this knowledge seems to have been greatest in the south and on the coast" „Three vehicles were known to the primitive Indian — the travois in the south and the sledge in the north for land travel, and the canoe wherever there were water ways." „The Indian's ideas of art are rude." „It is in the art of carving, however, that the greatest skill was shown"¹⁾. So these tribes do not seem to have attained to a high industrial development; the more so, as most of the instances Grinnell gives of their skill in carving relate to tribes of the Pacific Coast.

5°. *Property and wealth*. Whereas on the Pacific Coast influence and power depend on wealth, we shall see that in Central North America it is otherwise. Le Jeune, speaking of the Montagnais, remarks: „Rhetoric controls all these tribes, as the captain is elected for his eloquence alone, and is obeyed in proportion to his use of it, for they have no other law than his word"²⁾. Roosevelt states that among the Algonquins the war-chief „wielded only the influence that he could secure by his personal prowess and his tact"³⁾. The power of an Ojibway chief depends upon his wisdom, courage, and hospitality⁴⁾. Of the Blackfeet we are told: „Chiefs never receive a gift, con-

2) Jes. Rel., V p 195

3) Roosevelt, I p. 90

4) Jones, Ojibway Indians, p. 108

sidering it a degradation to accept anything but what their own prowess or superior qualities of manhood acquire for them. Their hearts are so good and strong that they scorn to take anything, and self-denial and the power to resist temptation to luxury or easily acquired property is a boast with them. On these men, in time of peace, when difficulties occur among themselves, the tribe relies, and in time of war they are their leaders to the scene of action." And Schoolcraft states that the chiefs „have little or no power, unless they have distinguished themselves as warriors and are supported by a band of braves" ¹⁾). Among the Kutchins, according to Jones, the chiefs are elected for their wisdom and courage, not for their birth. Hardisty, however, states that the power of the chiefs depends on the number of beads they own; for these afford a means of injuring those who displease them. And Whympere remarks: „The chiefs, who are without exception good hunters or fishers, often procure or strengthen their position by periodical distributions of their chattels. They not seldom have the worst clothing and food of all inhabitants" ²⁾). Among the Cheyennes generally the bravest and wisest man is elected as a chief ³⁾). Mrs. Eastman tells us of the Sioux, that formerly „their bravest men, their war chief too, no doubt exercised a control over the rest" The chief lived like the common people ⁴⁾). Among the Apaches, according to Schoolcraft „the chiefs are the wealthiest men, the most warlike, the first in battle, the wisest in council." According to Ten Kate the power of the chiefs depends on their success in forays. And Bancroft remarks: „Sometimes it happens that one family retains the chieftaincy in a tribe during several generations, because of the bravery or wealth of the sons" ⁵⁾) Comanche chiefs, according to Schoolcraft, „are selected for their known or pre-

tended prowess in war." In another place he states, that they are made chiefs for their „superior cunning, knowledge or success in war" ¹⁾

Influence and power depend thus on bravery, wisdom, eloquence, not on wealth. Only among the Apaches does it depend on wealth, though not on wealth exclusively. The distributions of property among the Kutchins somewhat resemble those on the Pacific Coast, but are not indicative of quite the same development of wealth, for on the Pacific Coast wealth consists to a large extent of more durable goods, such as houses, canoes, etc.

A few other statements also tend to prove, that wealth is not highly developed, the economic life of some tribes shows rather communistic features. Among the Kutchins „unless he is alone, a hunter cannot take and appropriate the meat of the animal he kills. Should he do so, he would be considered mean. And this feeling is strong. When two good hunters go together, good and well, the one has as good a chance of getting meat as the other, but when one is a bad hunter and the other a good one, the former gets all the meat and the real hunter has nothing, and loses his ammunition into the bargain" ²⁾. Among the Chepewyans the game is distributed among those who shared in the chase. The game which a man catches in his snare is his private property, „nevertheless any unsuccessful hunter passing by may take a deer so caught, leaving the head, skin, and saddle for the owner" ³⁾.

Among the Osages, too, wealth was formerly unknown, for in Hunter's time the old men disapproved of the fur-trade, which gave abundance and thereby led to effeminacy ⁴⁾.

6°. *Condition of women.* Le Jeune states, that among the Montagnais the sex has great influence. Household affairs are left to the discretion of the women, without any male inter-

1) Schoolcraft, I p. 231, II p. 132

2) Hardisty, p. 314

3) Mackenzie, I p. 153

4) Hunter, Gedenkschriften, p. 50

ference. The women „cut and decide and give away as they please” ¹⁾. Ojibway women, according to Jones, do the hardest work, are slaves of the men, get the worst food and the worst place in the wigwam; and Long states, that the wives are the slaves of their husbands ²⁾. Mackenzie tells us, that among the Knisteneaux women are in the same subjected condition as among other wild tribes ³⁾. Among the Blackfeet the husband may send his wife away when he likes; she then takes her property with her; the children remain with the father. Many men have 6 or 8 wives; they readily lend them to whites for brandy ⁴⁾. Chepewyan wives are subjected to their husbands, who are very jealous and „for very trifling causes treat them with such cruelty as sometimes to occasion their death” ⁵⁾. Among the Kutchins, as we have seen in § 2, the condition of women is a rather bad one ⁶⁾. Mackenzie speaks of the „extreme subjection and abasement” of Beaver Indian women ⁷⁾. Cheyenne women perform all the drudgery. Yet they have some influence in government matters; they do not attend the councils; but their wishes, privately uttered, are not generally disregarded ⁸⁾. Among the Sioux women as children and wives are despised, as girls a little more honoured. And Schoolcraft states that they exercise some influence in tribal matters by expressing their desires at home, but are not admitted to the council ⁹⁾. Bancroft, speaking of the Apache family in general (including Apaches, Comanches, and several other tribes) remarks: „Womankind as usual is at a discount. The female child receives little care from its mother, being only of collateral advantage to the tribe. Later she becomes

8) Dodge, p 122

9) Eastman, Dahcotah, p XXIV; Schoolcraft, II p. 189.

the beast of burden and slave of her husband." But another statement of the same writer proves that the women's condition is not so very bad: „The marriage yoke sits lightly; the husband may repudiate his wife and take back the property given for her; the wife may abandon her husband, but by the latter act she covers him with such disgrace that it may only be wiped out by killing somebody — anybody whom he may chance to meet" ¹⁾. The wife may thus with impunity leave her husband, the latter venting his anger upon „somebody". Schoolcraft states that Comanche women are not thought much of, even by themselves; the husband has unlimited sway over his wife ²⁾.

Now let us inquire what Grinnell, who is so well acquainted with Indian life, has to say about the treatment of women among the Indians in general. „A word or two with regard to the position of the wife in the household may not be out of place here. The Indian woman, it is usually thought, is a mere drudge and slave, but, so far as my observations extend, this notion is wholly an erroneous one. It is true that the women were the labourers of the camp, that they did all the hard work about which there was no excitement. They cooked, brought wood and water, dried the meat, dressed the robes, made the clothing, collected the lodge poles, packed the horses, cultivated the ground, and generally performed all the tasks which might be called menial, but they were not mere servants. On the contrary, their position was very respectable. They were consulted on many subjects, not only in connection with family affairs, but in more important and general matters. Sometimes women were even admitted to the councils and spoke there, giving their advice. This privilege was very unusual, and was granted only to women who had performed some deed which was worthy of a man. This in practice meant that she had killed or counted *coup* on an enemy, or had been to war. In ordinary family conversation women did

1) Bancroft, pp. 511, 513

2) Schoolcraft, I p 235, II p 132

not hesitate to interrupt and correct their husbands when the latter made statements with which they did not agree, and the men listened to them with respectful attention, though of course this depended on the standing of the woman, her intelligence, etc. While their lives were hard and full of toil, they yet found time to get together for gossip and for gambling, and on the whole managed to take a good deal of pleasure in life" ¹⁾. And Ten Kate, a careful observer, remarks that the Indians do not, as has often been asserted, regard woman as a beast of burden and a drudge. Her condition, as compared with that of the women of the lower classes in civilized countries, is rather better than worse ²⁾.

So the lot of the Indian woman is not so hard as at first sight it seems. Yet the fact, that several ethnographers picture it in such dark colours, whereas the describers of the tribes of the Pacific Coast agree, that the sex command great respect, tends to prove, that the condition of women is not quite so good here as on the Pacific Coast.

7^o. *Militarism*. These tribes are very warlike. Roosevelt states that warfare and hunting were the chief occupations of the Algonquins ³⁾. Among the Ojibways the end of education is to make good hunters and warriors ⁴⁾. According to Mackenzie, warfare and hunting, among the Knisteneaux, are the occupations of the men. They are continually engaged in warfare ⁵⁾. The Blackfeet are very warlike, and always fighting with their neighbours ⁶⁾. Mackenzie tells us, that it was a custom with Chepewyan chiefs „to go to war after they had shed tears in order to wipe away the disgrace attached to such a feminine weakness" ⁷⁾. The Beaver Indians were even more war-

like than the Chepewyans¹⁾. Mrs. Eastman calls the Sioux „brave, daring, revengeful”²⁾. The Apaches, according to Bancroft, „are in their industries extremely active, — their industries being theft and murder, to which they are trained by their mothers, and in which they display consummate cunning, treachery, and cruelty”³⁾. And the same writer tells us that „the Comanches, who are better warriors than the Apaches, highly honour bravery on the battle-field. From early youth, they are taught the art of war, and the skilful handling of their horses and weapons; and they are not allowed a seat in the council, until their name is garnished by some heroic deed”⁴⁾.

We see, that the Indians of Central North America present a strongly marked contrast with such tribes as the Koniagas who are „adapted to labour and commerce rather than to war and hunting” and the Chinooks who „were always a commercial rather than a warlike people.” Therefore all available men are wanted in warfare; they cannot afford to have male slaves living among them, who do not share in their military operations. They are very much in need of warriors, and little of labourers. Accordingly among many of these tribes such prisoners of war as are allowed to live, are adopted into the tribe or into some family within the tribe. This is the case among the Montagnais, Ojibways, Potawatomi, Cheyennes, Sioux, Osages, Apaches, Comanches⁵⁾.

Concluding, we may remark, that the Indians of Central North America differ from the tribes of the Pacific Coast in many respects. They have no abundance of food, are hunters and nomadic; wealth does not exist, and militarism prevails to a great extent. The groups in which they live, though larger than in Australia, are smaller than on the Pacific Coast.

Food is preserved, though not so systematically as on the Pacific Coast. The condition of women, though not so bad as in Australia, is not quite so good as among the slave-keeping tribes of the North-west Coast of North America. Their trade consists only in exchanging raw products; and industry is little developed.

§ 5. *Experimentum crucis: Eskimos.*

1^o. *Abundance of food.* In Greenland vegetable food is very scarce. The flesh of the reindeer is most valued by the Greenlanders, but is not available in large quantities; so they have to live chiefly upon sea-animals, seals, fish and sea-birds ¹⁾. Boas states that „the mode of life of all the Eskimo tribes of Northeastern America is very uniform.” They depend entirely on animal food, especially seals and deer ²⁾. Bancroft, speaking of the Eskimos of Alaska, remarks: „Their substantials comprise the flesh of land and marine animals, fish and birds; venison, and whale and seal blubber being chief” ³⁾. Though we nowhere find it stated that food is exceedingly scarce, the details given here sufficiently prove that it is not nearly so abundant as on the Pacific Coast. Shell-fish, fruits, roots, and other vegetables, acquired so easily and in large quantities by the tribes of the Pacific Coast, do not enter for any considerable part into the food of the Eskimos.

2^o. As for *fishing*, taken in the wider sense (including the killing of water animals besides fish), all Eskimos are fishers.

3^o. *Fixed habitations, large groups, preserving of food.* Though the Eskimos move about much for the purpose of obtaining food, they are not quite nomadic. In winter-time they live in solidly constructed dwellings ⁴⁾. Rink states that they have their winter-houses on the same place during several generations ⁵⁾.

5) Rink, p 9.

Boas remarks: „There is no need of any new buildings, as the Eskimo always locate in the old settlements and the old buildings are quite sufficient to satisfy all their wants” ¹⁾. And Crantz tells us that a Greenlander is not generally much inclined to leave the place where he was born and bred and settle somewhere else; for in nearly every place there is a peculiar method of fishing and seal-hunting, which the new-comer has to learn; and in the meantime, often for several years, he is poorly off ²⁾. An Eskimo village most often consists of a single house ³⁾, but Eskimo houses accommodate several (in Greenland from 4 to 10) families ⁴⁾. Among the Western Eskimos, however, there are larger villages ⁵⁾. Food is preserved for winter use by the Eskimos, though not in such large quantities as on the Pacific Coast. The Greenlanders, though laying up some provision for the winter, are rather improvident. As long as they have abundance of food, they feast and gorge themselves with it; but in the winter they often live in the greatest misery ⁶⁾. Boas, speaking of Central Eskimo store-houses, remarks: „In winter, blubber and meat are put away upon these pillars, which are sufficiently high to keep them from the dogs.” Yet „the house presents a sad and gloomy appearance if stormy weather prevents the men from hunting. The stores are quickly consumed, one lamp after another is extinguished, and everybody sits motionless in the dark hut” ⁷⁾. Among the Eskimos of Alaska „meats are kept in seal-skin bags for over a year. . . . Their winter store of oil they secure in seal-skin bags, which are buried in the frozen ground” ⁸⁾.

4^o. *Trade and industry*. Rink states that the Eskimos make long journeys for the purpose of interchanging such commo-

dities, as are found in some districts only and yet are necessary to all the tribes. The trade is carried on from Asia to Hudson Bay ¹⁾. The Greenlanders mutually exchange the articles they need. With some of them bartering is quite a passion; they often exchange useful things for worthless trifles. They have a kind of annual fair, at which the inhabitants of several districts interchange the products of their country. „A great article of commerce are vessels made of soapstone, which are not found in all parts of the country; and, as the Southern Greenlanders have no whales and the Northern no wood, there come, all through the summer months, from the South and even from the East of the country many boats with Greenlanders from 100 to 200 miles, to Disko, bringing new kyaks and women's boats with the necessary implements. They receive in exchange horns, teeth, bones, whale-bones and whale-tendons, part of which, on their homeward voyage, they sell again" ²⁾. Among the Central Eskimos „two desiderata formed the principal inducement to long journeys, which sometimes lasted even several years: wood and soapstone. The shores of Davis' Strait and Cumberland Sound are almost destitute of driftwood, and consequently the natives were obliged to visit distant regions to obtain that necessary material. Tudjaqdjuaq in particular was the objective point of their expeditions. Their boats took a southerly course, and, as the wood was gathered, a portion of it was immediately manufactured into boat ribs and sledge runners, which were carried back on the return journey; another portion was used for bows, though these were also made of deer's horns ingeniously lashed together. A portion of the trade in wood seems to have been in the hands of the Nugumiut, who collected it on Tudjaqdjuaq and took it north. Another necessary and important article of trade, soapstone, is manufactured into lamps and pots. It is found in a few places only, and very rarely in pieces large enough for the manufacture of the articles named....

1) Rink, p. 11.

2) Crantz, I pp. 195, 196

The visitors come from every part of the country, the soapstone being dug or „traded” from the rocks by depositing some trifles in exchange. In addition to wood and soapstone, metals, which were extremely rare in old times, have formed an important object of trade. They were brought to Baffin Bay either by the Aivillirmiut, who had obtained them from the Hudson Bay Company and the Kinipetu, or by the Akuliarmiut. Even when Frobisher visited the Nugumiut in 1577 he found them in possession of some iron. The occurrence of flint, which was the material for arrow-heads, may have given some importance to places where it occurs. Formerly an important trade existed between the Netchillirmiut and the neighbouring tribes. As the district of the former is destitute of driftwood and potstone, they are compelled to buy both articles from their neighbours. In Ross's time they got the necessary wood from Ugjulik, the potstone from Aivillik. They exchanged these articles for native iron (or pyrite), which they found on the eastern shore of Boothia and which was used for striking fire. After having collected a sufficient stock of it during several years, they travelled to the neighbouring tribes”¹⁾ The Eskimos of Alaska are also very commercial. „On the shore of Bering Strait the natives have constant commercial intercourse with Asia.... They frequently meet at the Gwosdeff Islands, where the Tschuktschi bring tobacco, iron, tame-reindeer skins, and walrus-ivory; the Eskimos giving in exchange wolf and wolverine skins, wooden dishes, seal-skins and other peltries. The Eskimos of the American coast carry on quite an extensive trade with the Indians of the interior, exchanging with them Asiatic merchandise for peltries”²⁾. We see that most of the Eskimo trade is bartering of raw products. This agrees with what Rink remarks, viz. that there is no division of labour; each group that has a tent or boat is entirely self-dependent”³⁾.

In industry they display much skill. Their boats are inge-

1) Boas, l c p 469

2) Bancroft, pp. 63, 64

3) Rink, p. 13

niously made and have excited the admiration of all travellers. „The kajak (qajaq) is almost exclusively used for hunting by all Eskimo tribes from Greenland to Alaska” ¹⁾. Crantz tells us that the implements the Greenlanders use for procuring their subsistence are simple, but so well adapted to their purpose that they are more convenient than the costly implements of the Europeans. Their harpoons consist of several pieces, but are so ingeniously made that not a single piece is superfluous. Their boats are also greatly admired by this writer ²⁾. And Bancroft tells us that „the Hyperboreans surpass all American nations in their facilities for locomotion, both upon land and water. In their skin boats, the natives of the Alaskan seaboard from Point Barrow to Mount St. Elias, made long voyages, crossing the strait and sea of Bering, and held commercial intercourse with the people of Asia. Sixty miles is an ordinary day’s journey for sledges, while Indians on snowshoes have been known to run down and capture deer”. „So highly were these boats esteemed by the Russians, that they were at once universally adopted by them in navigating these waters. They were unable to invent any improvement in either of them” ³⁾.

5⁰. *Property and wealth*. It is nowhere stated that a man’s rank or power depends upon his wealth. The Greenlanders live without any government; the head of each family is independent. When several families live together in one house, they have no control over each other, but voluntarily obey the most respected head of a family, i. e. the one who is best acquainted with hunting and the signs of weather. Yet our informant also states. „If several Greenlanders live together, they like to keep an *angelok* (priest), to avail themselves of his advice. And if they do not keep one, they are despised or pitied by the others as being poor men” ⁴⁾. So poor people

2) Crantz, I pp. 165 –168

3) Bancroft, pp 59, 61

4) Crantz, I pp 201, 202; III p. 180 note

are despised, but this applies to villages or settlements rather than individuals. This agrees with what Rink tells us of their communistic *régime*. Only the indispensable implements and utensils are individual property, and also provisions sufficient for less than a year. If an individual or group have got too much, they are compelled by public opinion to give it to those who have too little¹⁾. Among the Central Eskimos men unable to provide for themselves are employed as servants, but their position „is a voluntary one, and therefore these men are not less esteemed than the self-dependent providers”²⁾. Among the Eskimos of Alaska „now or then some ancient or able man gains an ascendancy in the tribe, and overawes his fellows.” „Caste has been mentioned in connection with tattooing, but, as a rule, social distinctions do not exist”³⁾.

Though the Eskimos are dependent for their subsistence on the possession of boats, houses and implements, they do not want more property than is needed for procuring their daily food. According to Rink an heir inherits duties rather than fortune; for boat and tent continually require so much mending, that a single hunter is hardly able to keep them in order⁴⁾. In Greenland, if a man dies leaving no full-grown son, his goods devolve upon the next of kin, who is obliged to provide for the widow and her children. But if he already possesses a tent and a boat, he will leave the inheritance and the duties connected with it to an alien; for nobody is capable of keeping two tents and two boats in repair⁵⁾.

6'. *Condition of women* Though not quite so bad as in Australia, woman's condition is not so good here as among the Indians of the Pacific Coast. Greenland women lead a hard and almost slave-like life, says Crantz⁶⁾. And Bancroft

1) Rink, pp. 9, 29.

2) Boas, l c p 581.

3) Bancroft, p 65.

4) Rink, p. 26.

6) Crantz, I p 187.

tells us that among the Eskimos of Alaska „the lot of the women is but little better than slavery”¹⁾. The principal cause of this difference perhaps is, that female labour among the Eskimos is not productive. In Greenland „a man who has two wives is not despised; on the contrary he is looked upon as an able provider”²⁾. This proves that subsistence depends upon male, not as in Australia upon female labour. Among the Central Eskimos „the principal part of the man’s work is to provide for his family The woman has to do the household work, the sewing, and the cooking”³⁾. Among the Western Eskimos „polygamy is common; every man being entitled to as many wives, as he can get and maintain”⁴⁾. So the man maintains the family; female labour, however useful, is not so indispensable as male. The men know this quite well. In Greenland „the man hunts and fishes, and having brought the animals ashore he pays no more attention to them; it would even be a disgrace for him to carry the captured seal on land”⁵⁾. This is quite another state of things than what we have seen to exist on the Pacific Coast, where female labour, especially in the preparation of articles of commerce, is highly valued.

7^o. *Militarism*. Among the Greenlanders warfare is unknown⁶⁾. Boas, speaking of the Central Eskimos, says „Real wars or fights between settlements, I believe, have never happened, but contests have always been confined to single families”⁷⁾. In Alaska it is otherwise, for „the Northern Indians are frequently at war with the Eskimos and Southern Indians, for whom they at all times entertain the most inveterate hatred”⁸⁾. This absence of militarism enables the Green-

8) Bancroft, p. 120

landers and Central Eskimos to have men performing women's work living among them, as we have seen in § 1 of this Chapter¹⁾.

So the Eskimos, like the slave-keeping tribes of the Pacific Coast, are accomplished fishers, have fixed habitations, are industrially highly developed, and generally not warlike. On the other hand there is no abundance of food, wealth does not exist, and woman's condition is not nearly so good as on the Pacific Coast. Also in the size of their groups, the preserving of food, and the development of trade, they are decidedly inferior to the slave-keeping tribes of the N. W. Coast of North America.

The principal cause why the Eskimos do not keep slaves is the difficulty with which food is procured. We have seen that female labour, being unproductive, is little valued. Male labour only is indispensable, and this is labour of high quality. Navigating in the kyak is a matter of much skill. Crantz tells us that Europeans who tried it, could move about a little in very calm weather; but they were not able to fish while being in the kyak, nor to save themselves when the least danger occurred. This requires peculiar skill, and Eskimos take several years to learn it. There are indeed men unable to capture seals; they are much despised²⁾. Bancroft also states that considerable skill is required in taking seals³⁾, and Boas describes at great length the ingenious methods used in seal, walrus, and whale hunting⁴⁾. Unskilled labour is not wanted; and widows and orphans who have lost their breadwinner may be glad if any one is willing to receive them into his house⁵⁾.

Sometimes an Eskimo wants labour. In Greenland a married couple having no children at all or no full-grown children,

1) See above, p. 198

2) Crantz, I pp 172, 173, 184, 185.

3) Bancroft, p 56

4) Boas, I c pp. 471 sqq

5) See above, pp 47—49

adopt male and female children whom they treat as their own; the adopted son is considered the future head of the family ¹⁾ Among the Central Eskimos too, as to the right of inheritance „an elder adopted son has a preference over a younger son born of the marriage” ²⁾. Thus we see that a normally constituted family is self-dependent. If there are no children, their place has to be supplied by strangers; boys have to perform the same highly skilled labour as the father, and girls to help the mother in her work that, though less valued, has also to be done. But a further increase of the family by slaves performing menial work is not wanted; the man, if able, would not be willing to maintain them. The only kind of labour indispensable here cannot be imposed upon slaves; and the cost of maintaining slaves performing other work would be greater than the profit they would yield. Food is not preserved in such large quantities as on the Pacific Coast; shell-fish and vegetable food are almost entirely unknown here; nor is any fish, oil, etc. prepared for commercial purposes.

There is one more cause at work among the Eskimos, preventing the existence of slavery. the dependence of labour upon capital. Boas, describing the Central Eskimos, states that among the adopted people „who may almost be considered servants” there are „men who have lost their sledges and dogs” Such servants „fulfil minor occupations, mend the hunting implements, fit out the sledges, feed the dogs, etc.; sometimes, however, they join the hunters. They follow the master of the house when he removes from one place to another, make journeys in order to do his commissions, and so on” ³⁾. And Crantz tells us that among the Greenlanders many boys are neglected in their youth, as the providing of them with kyak and implements is very costly ⁴⁾. On the

1) Crantz, I p 186

2) Boas, l c p 581

3) L c

4) Crantz, I p 215

Pacific Coast the possession of capital gives great advantage; thus among the Makah the owner of the canoe receives a proportionate share of the booty from the crew¹⁾; but it is not indispensable. Here it is. A man destitute of capital cannot provide for himself, and is therefore at the mercy of the capitalist. Now the Eskimo capitalist most often allows such men to share his house and food, and makes them feed the dogs, etc. rather as means of procuring employment for them, than because such work requires hands outside the family. The capitalist does not want labourers; but even if he did, there would always be widows and orphans, and men destitute of capital, who would readily enter into his service. The Eskimos have to struggle with „unemployment” difficulties, not with scarcity of hands; therefore a slave-dealer visiting them would not find a ready sale for his stock-in-trade.

§ 6. Conclusion.

We shall sum up here the conclusions to which the foregoing paragraphs have led us.

1^o. *Hunters* hardly ever keep slaves; and when they do slavery is of little moment. But among *fishers* slavery often, though by no means always, exists: of the two large groups of fishing tribes one (the group on the Pacific Coast) keeps slaves, the other (the Eskimos) does not.

2^o. The living in *fixed habitations* is more favourable to the existence of slavery than *nomadism*.

3^o. Slavery is most likely to exist among men who live in rather *large groups*.

4^o. Where *food* is *abundant* and easy to procure, slaves can be of more use than where food is scarce; in the latter case the slave, to use Spencer's words, „is not worth his food.”

5^o. The *preserving of food* furthers the growth of slavery.

6^o. *Commercial tribes*, especially those that carry on a trade

1) See above, p 209

in manufactured goods, have more use for slaves than others. We must, however, bear in mind that trade, even among savages, does not seem anywhere to be altogether unknown.

7^o. A high development of *industry* also tends to further the growth of slavery. The instance of the Eskimos, however, shows that industrial tribes do not always keep slaves.

8^o. Where *wealth* exists slaves are more likely to be kept than where wealth is unknown.

9^o. Where *subsistence is dependent on capital*, slaves are not wanted.

10^o. Where only highly *skilled labour* is required, slaves cannot be of any use.

11^o. *Female labour* may in some degree serve as a substitute for slave labour (as in Australia). But where women enjoy much consideration, the men sometimes procure slaves in order to relieve the women of a part of their task, especially where the women perform productive labour.

12^o. Where *militarism* largely prevails, and warriors are more wanted than labourers, slavery is not likely to exist. Yet in a few cases the same militarism leads to the keeping of slaves, viz. when slaves are kept mainly for military purposes.

13^o. Tribes forming a somewhat *homogeneous group*, and maintaining constant relations with each other, are more likely, *ceteris paribus*, to keep slaves, than an isolated tribe.

These conclusions, arrived at by an examination of hunting and fishing tribes, all, except the first, bear a general character. We may therefore suppose that they will equally apply to pastoral and agricultural tribes. Whether this really be the case, will appear from the ensuing Chapters. It may, however, be convenient first to simplify and systematically arrange them.

As the *principal factor* we may regard the general economic state of society. Two distinctions are to be made here:

1^o. Subsistence either is or is not dependent on capital.

2^o. Subsistence is either easy or difficult to acquire.

These two distinctions are independent of each other. For where subsistence depends on capital, it may, with the aid of capital, be easily acquired or not. Similarly, where it does not depend on capital, it may be easy or difficult to procure. Accordingly we find the following forms of economic life:

1^o. Subsistence depends on capital. Without capital a man cannot get on. Now, if labourers are wanted, there are always people destitute of capital, who have no other resource left but to offer their labour to the capitalist. But there is a difference, according as subsistence is easily acquired or not.

a. Subsistence, even with the aid of capital, is difficult to procure. The procuring of subsistence requires a combination of capital and skilled labour. Thus among the Eskimos a man unacquainted with their ingenious hunting and fishing methods cannot get on any more than a man destitute of a boat, or of sledges and dogs. Here labourers are not much wanted. Helpless persons are kept as servants, but this is done for pity's sake rather than because they are useful. Slavery does not exist.

b. Subsistence, with the aid of capital, is easy to procure. Unskilled labour, combined with capital, is so productive that it gives a surplus beyond the subsistence of the labourer. In this case the capitalist wants labourers, but there are also labourers who want the capitalist. We have not yet met with any instance of this state of things. Slavery can exist here, if the demand for labour exceeds the supply of labour; but we do not think this will often be the case.

2^o. Subsistence does not depend on capital. We are, of course, aware that a man, to procure his subsistence, always wants some implements, such as a spear, bow and arrow, etc. But he does not, therefore, depend on capital; for he can always make a spear or bow for himself; so after all, he depends only on his own strength and skill. If an Eskimo loses his boat, he wants long time to make a new one; in the meantime he has to live, and so is thrown upon the mercy of others. But where the necessary implements can always be procured at a moment's notice, subsistence is not

dependent on capital: the man who has broken his spear can immediately make a new one; he need not ask anybody to feed him in the meantime.

Subsistence, where it does not depend on capital, is again either easy or difficult to procure.

a. Subsistence is not easy to procure; it requires much skill. As subsistence does not depend on capital, every skilled labourer is able to provide for himself. Those who are not able providers are dependent on the others; but their labour, being little productive, is not much valued. Such is the state of things among many hunting tribes. As slaves cannot be compelled to perform work that requires the utmost skill and application, slavery cannot exist here.

b. Subsistence is easy to procure. The produce of unskilled labour can exceed the primary wants of the labourer. As subsistence is not dependent on capital, everybody is able to provide for himself; therefore labourers do not voluntarily offer themselves. Now, if a man wants the products of another's labour, he can proceed in several ways. He can himself produce commodities, and exchange them for what another has produced. He can also, like the Makah boat-owner, produce such things as enhance the productiveness of labour, and lend them to others, stipulating for a part of the profit for himself. But there is another manner in which he can attain his end: he can by force compel others to work for him. And we know that one form of compulsory labour is slavery. This manner will often be the most profitable; for the slave-owner has only to survey the labour of his slave, and leave him the mere necessities of life; whereas in the way of free commerce he would have to produce as much, or nearly as much, as he would get in return. Therefore, when subsistence is easy to procure, and not dependent on capital, slave labour can be of much use. Yet even then slavery does not always exist. We shall see that there are additional causes. But we may now, at least, say that, generally speaking, *slavery can only exist when subsistence is easy to procure without the aid of capital.*

There are some additional, or *secondary*, causes which increase or diminish the use of slave labour.

1^o. It may be, that unskilled labour is required, but is sufficiently performed by the women. Thus in Australia women gather vegetable food and perform all the common drudgery; and some Australian tribes subsist mainly on the produce of female labour. In such cases slaves are not wanted. This is a circumstance of much importance; for everywhere women are about a half, sometimes more than half, of the population. As in our days, in civilized Europe, the employing of women in factories tends to keep wages low, *female labour* in Australia makes slavery superfluous. The causes on which the division of labour between the sexes depends cannot be examined here; this would require an investigation of the whole history of family and marriage. But, though unable to find the causes, we can trace the effects of this division of labour. Where women are looked upon as „beasts of burden” (to use an expression our ethnographers are very fond of), there is not so much use for slave labour as where they hold a high position and the men are desirous of relieving them of a part of their task.

2^o. Where *food* is *preserved* in large quantities, more labour has to be done at a time, viz. in the season of plenty, than where life is continually a hand-to-mouth proceeding. And the additional work required for preserving food, e. g. the drying of fish, is very fit to be imposed upon slaves: it requires little skill and is easy to supervise.

3^o. The development of *trade and industry* has a great influence. When the freemen wish to devote themselves to these pursuits, they want others to perform the common drudgery for every-day subsistence. Moreover, the preparing of the articles of commerce may require menial labour thus on the Pacific Coast slaves are employed in drying fish, preparing oil, etc. And finally, trade and industry lead to the development of wealth. As soon as wealth exists, a man does not only want food and the other necessities of life, but also luxuries, so his wants may become almost unlimited, and there is much more use for slave labour.

Hitherto we have considered slavery as serving economic purposes. But *slaves* may also be *kept for non-economic purposes*. There is only one such purpose we have as yet met with: the *employing of slaves in warfare*. We have seen that among the Abipones this is the main and almost the only function of slavery.

On the other hand, it may be that *militarism* so largely prevails, that all available men are wanted in warfare. If, then, the military organization is not so highly developed, that slaves can be employed in warfare without any danger, slavery is not likely to exist, though it might be economically of great use.

There are other causes, which we may call *external*. However much slaves are wanted, there must be a coercive power strong enough to make the keeping of slaves possible. The following causes tend to increase this coercive power:

1^o. Living in *fixed habitations*. Besides the effect this has on the growth of industry, it makes the escape of slaves more difficult and the surveying of slave labour easier.

2^o. Living together in *large groups*. In a small group any increase in the number of slaves would soon become dangerous to the maintenance of power by the freemen within the group, and an escaping slave would soon be out of reach of the group.

3^o. The *preserving of food*. Besides having some economic effects of which we have treated above, it makes living in large groups and in fixed habitations possible; moreover it attaches the slave to his master's home; for he knows he will get there sufficient food in the time of scarcity, whereas, if he escaped, he would have to shift for himself.

4^o. The existence of a somewhat *homogeneous group of tribes* maintaining constant relations with each other greatly accelerates the growth of slavery, especially by means of the *slave trade*. Twenty tribes, living separately, have, each for itself, to invent slavery; but when twenty tribes maintain relations with each other, as soon as one of them has invented slavery, the other 19 have it ready-made before them.

Recapitulation.

| I. Internal causes. | Positive. | Negative. |
|-----------------------------|--|--|
| A. General: | 1 ⁰ . Subsistence easily acquired and not dependent on capital. | 1 ⁰ . Subsistence dependent on capital. 2 ⁰ . Subsistence not dependent on capital, but difficult to acquire. |
| B. Secondary, economic: | 1 ⁰ . Preserving of food. 2 ⁰ . Trade and industry. 3 ⁰ . A high position of women. | 1 ⁰ . Female labour making slave labour superfluous. |
| C. Secondary, non-economic: | 1 ⁰ . Slaves wanted for military purposes. | 1 ⁰ . Militarism making slavery impossible. |
| II. External causes: | 1 ⁰ . Fixed habitations. 2 ⁰ . Living in large groups. 3 ⁰ . Preserving of food ¹⁾ . 4 ⁰ . The existence of a homogeneous group of tribes. | |

1) »Preserving of food" occurs twice, because it works in different directions

CHAPTER III — PASTORAL TRIBES

— — —

§ 1. *Capital and labour among pastoral tribes.*

The number of these tribes is not large, as they are found in a few parts of the world only. Moreover, the descriptions available to us are in many cases too incomplete to justify any inference as to their having or not having slaves.

The clear cases noticed by us are the following.

| | | | |
|------------------------|----------------|----------------------|----------|
| <i>Positive cases.</i> | Arabia: | Aeneze Bedouins, | |
| | | Larbas. | 2 |
| | Caucasus: | Circassians, | |
| | | Kabards. | 2 |
| | Hamitic group. | Beduan. | |
| | | Beni Amer, | |
| | | Somal, | |
| | | Danakil, | |
| | | Fulbe, | |
| | | Moors of Senegambia, | |
| | Tuareg. | 7 | |
| | | | <hr/> 11 |
| <i>Negative cases.</i> | India: | Todas. | 1 |
| | | | |
| | Central Asia: | Kazak Kirghiz | |
| | | Altaians, | |
| | Turkomans. | 3 | |

| | | |
|----------------|--|----------|
| Siberia: | Samojedes, Tunguz, nomadic Koryakes. | 3 |
| Bantu tribes: | Ama-Xosa, Ama-Zulu, some divisions of the Mund- ombe. | 3 |
| Hamitic group: | Massai. | 1 |
| | | <hr/> 11 |

The pastoral tribes on which we have collected some notes, without arriving at a definite conclusion as to the existence of slavery, are the Goajiro, Kurds, Shahsewenses, Mongols, Namaqua, Ovaherero, Matabele, Inland-Tuski, Kalmucks, Fejir Bedouins, Syrian Bedouins, Mairs and Meenas.

We see that there are as many positive as negative cases. So those theorists are wrong, who hold that the taming of animals naturally leads to the taming of men ¹⁾).

It might, however, be that the non-existence of slavery in our negative cases were due to a special, external cause, viz. that these tribes were so inclosed between superior peoples as not to be able to procure slaves, though slaves would be of much use to them. A brief survey of the political state of these tribes shows that they are not all in this position. The Kazak Kirghiz, in Levchine's time, kidnapped slaves whom they sold abroad. The Massai are very warlike and adopt captives. The Turkomans are „the intermediate agents for carrying on the slave-trade” ²⁾ The Ama-Xosa and Ama-Zulu are also very warlike ³⁾. We see that there are some pastoral tribes that, though able to procure slaves, do not keep any. The non-existence of slavery among them must be due to other, more internal, causes.

It might also be that our positive cases were exceptions

1) See above, pp 170, 171

2) See above pp 126, 127, 130, and Baumann, p 165.

3) Fritsch, pp 79, 80, 135, 136

to a general rule. For many pastoral tribes, though subsisting mainly by cattle-breeding, carry on agriculture besides. If these only kept slaves, and employed them chiefly in work connected with agriculture, slavery would prove foreign to pastoral nomadism as such; for then these tribes would only keep slaves in their quality as agriculturists.

We shall inquire whether this be so; and for this purpose we shall give a survey of the work imposed upon slaves among pastoral tribes. This survey, besides enabling us to decide upon the question at issue, will show what place slavery occupies in pastoral life.

Among the *Larbas* the boys (also free boys) guard the cattle on the pasture-ground, whereas the work that requires more skill (the tending of young animals, the breaking of horses, etc.) is equally divided between master and slaves ¹⁾.

Circassian slaves, according to Bell, till the soil, tend the cattle, and perform domestic labour Klaproth, however, states that the peasants may only be sold together with the land; so they are rather a kind of serfs. Domestic slaves may be sold separately ²⁾.

Munzinger speaks of domestic labour being imposed on slaves by the *Beduan*. Most of these slaves are women ³⁾.

Among the *Beni Amer* it is considered an honour to have many slaves. „Properly speaking slaves serve their master only when children. Adult female slaves are concubines, live with their master, but are exempt from nearly all labour; adult male slaves generally despise all labour, and belong to the retinue of the master. The master derives no real profit from his slaves.” According to Von Muller the fabrication of tar falls to the share of the slave, such work being below the dignity of a freeman ⁴⁾.

Paulitschke tells us that among the nomadic *Somal* and

1) Geoffroy, pp 430, 431

2) Bell, I p 170, Klaproth, p 567

3) Munzinger, Ostafr Stud, pp 154, 155

4) Ibid., p. 310, Von Muller, p 429.

Danakil slavery is not profitable; for the territories inhabited by them are thinly peopled, agriculture is insignificant, and these cattle-breeders get their subsistence rather easily; moreover they would be unable to support a considerable number of slaves by the produce of their cattle. Therefore among the *Danakil* on the river *Aussa* and the *Rahanwin* *Somal* on the lower *Wébi-Schabéli*, where slaves are employed in agriculture, there is more use for slave labour. Among the nomadic *Somal* and *Danakil* slaves appear also to be employed in warfare. According to *Bottego*, whose account applies to the *Somal* of the towns, adult male slaves till the soil, build houses, and perform the rudest and most fatiguing kinds of work. The boys lead the cattle to the pasture-ground; the women are employed in household labour and often are concubines of their masters ¹⁾.

Among the *Fulbe*, according to *Rohlf's*, all the rowers of the ships are slaves. *Béranger-Féraud* states that freemen disdain all labour except warfare and agriculture; but this does not agree with what he says in another passage, viz. that, where intermarriage with Negroes has been frequent, the *Fulbe* are more than elsewhere given to agriculture. *Waitz*, who has consulted much literature on the *Fulbe*, states that most of their warriors are slaves; moreover there are domestic and agricultural slaves ²⁾.

The slaves kept by the *Moors of Senegambia* are stated to have a hard lot, to be treated in fact as beasts of burden ³⁾.

The *Tuareg* employ their slaves chiefly for domestic labour ⁴⁾.

There are some tribes that subsist mainly on agriculture, but also, to a great extent, on cattle-breeding. It may be of some use to give a survey of slave labour among them too;

1) *Paulitschke*, II pp. 138, 139, I pp. 260, 213, 263; *Bottego*, p. 423.

2) *Rohlf's*, p. 105, *Béranger-Féraud*, pp. 143, 140, *Waitz-Gerland*, II pp. 470, 471

3) *Béranger-Féraud*, p. 72

4) *Letourneau*, p. 252

it will appear, then, whether they keep their slaves for agricultural purposes only, or employ them also in pastoral labour.

Among the *Kafirs* some slaves are blacksmiths. In war a slave boy beats the drum ¹⁾. Our informant speaks only incidentally of slave labour; he does not mean to say that this is the only work performed by slaves.

Among the *Barotse* young slaves are given as pages to the children of freemen. Slaves till the soil and tend the cattle; slave boys are employed as herdsmen ²⁾.

A describer of the *Waganda* tells us: „One of the principal evils resulting from slavery in Uganda is that it causes all manual labour to be looked upon as derogatory to the dignity of a free man” ³⁾.

Among the *Mandingos* native-born slaves enjoy much liberty; they tend the cattle, and go to war, even without their masters. Freemen work as much as slaves. Every Mandingo, to whatever class he belongs, is occupied in agriculture. The tending of horses is incumbent on slave boys ⁴⁾.

Hildebrandt states that the occupations of the *Sakalavas* are not many. In North Sakalavaland, however, rice is cultivated for export, and so there is more labour wanted here; therefore in this district slavery prevails to a large extent ⁵⁾.

Among the *Bogos* there are hardly 200 slaves (whereas Munzinger estimates the total population at 8400). Slaves are of little use to their owners. Male slaves live separately and generally take to robbery. Female slaves, having no opportunity to marry, become prostitutes and live rather independently ⁶⁾.

The *Takue* have very few slaves. In their laws and customs they show a close resemblance to the *Bogos* ⁷⁾.

6) Munzinger, Bogos, pp 49, 50, 35

7) Munzinger, Ostaf. Stud., pp. 207. 206.

Among the *pirate-tribes of Mindanao and Sulu* agriculture is incumbent on slaves. The slaves also share in their masters' slave-raids. Jansen gives some more details about slave labour in the Sulu Islands. The ordinary occupations of slaves are agriculture, fishing, manufacture of salt, trade, and domestic labour ¹⁾).

The slaves of the *Geges and Nagos* of Porto Novo are chiefly employed in agriculture ²⁾).

Among the *Ossetes* the slaves perform household labour; the peasants are serfs ³⁾).

The slaves captured and purchased by the *Gallas* are generally sold to foreign traders; in large households they are sometimes retained and employed in various kinds of work. In another place our informant states that most slaves are employed in agriculture ⁴⁾).

Yoruba slaves are employed in trade and warfare ⁵⁾).

We see that slaves are employed in agriculture among the agricultural Somal and Danakil, Fulbe, Barotse, Mandingos, Sakalavas, pirate-tribes of Mindanao and Sulu, Geges and Nagos, Gallas; and very probably also among the Waganda, where they perform „all manual labour.” As the details given by our ethnographers are not always complete, it is possible that in some more cases slaves are employed in agriculture. But it is sufficiently clear, that among the Beni Amer, nomadic Somal and Danakil, Bogos, and probably also among the Beduan and Takue, slaves do not till the soil. Among the Ossetes and Circassians the peasants are serfs, slaves being employed in household labour. What work is incumbent of slaves among the Aeneze Bedouins we are not told; but agriculture seems to be unknown among them. Among the Larbas the daily work is equally divided between master and slaves,

5) Lander, I pp. 47, 37, 113

agriculture holding a very subordinate place. Hence it appears that several of these tribes keep slaves, though they do not employ them in agriculture; pastoral tribes, as such, sometimes keep slaves.

But another inference we can draw from the foregoing survey of slave labour is this. Where slaves are not employed in agriculture or in such other work as requires a settled life (e. g. house-building among the Somal of the towns, fishing and manufacture of salt among the pirate-tribes of Mindanao and Sulu), the use of slave labour is not great. Among the Beni Amer, Bogos, and nomadic Somal and Danakil slave-keeping is stated to be a mere luxury. The Sakalavas, except in the rice-exporting district, do not want much slave labour. And only in one case, viz. among the Larbas, is it clearly stated that the chief business of slaves is pastoral labour.

This tends to prove, that *among true pastoral tribes slavery, as a system of labour, is of little moment*. This inference is verified by several statements about slaves being often manumitted or in the course of time becoming practically free.

Burckhard, speaking of the slaves of the *Aeneze Bedouins*, says „After a certain lapse of time they are always emancipated, and married to persons of their own colour”¹⁾.

Among the *Circassians* slaves are often manumitted. A slave can also purchase his freedom, and then becomes a member of a Circassian fraternity²⁾.

The *Beni Amer* have two kinds of slaves, newly-purchased and native-born. „Their condition differs so much, that only the former may properly be called slaves; the latter are rather serfs. The newly-purchased slave is treated like every Mohammedan slave, he may be sold and does not yet belong to the family. The native-born slave has only the name, not the state of a slave; this appears from his being allowed to intermarry with the *Woreza* (subjected class). The children born of such a marriage are considered free, as they descend from

1) Burckhardt, I p 356

2) Bell, I pp. 169, 308

a free mother. In Barka the Kishendoa, i. e. native-born slaves, who inhabit a camp of tents of their own, are governed by a chief who is one of their own number, and intermarry with the *Woreza*. Native-born slaves may live where they like and have the same right of inheritance as freemen; only if such a slave leaves no relatives does the master succeed to his goods.... In the blood-feud too the native-born slave is in a peculiar condition. If a newly-purchased slave is killed, his price is restored to his owner; for such a slave is looked upon as an article of trade. The native-born slave, however, belongs to the family; therefore his blood requires blood; he is avenged by his relatives if there are such, and otherwise by his master; if this is not practicable because the murderer is a man of power, the matter is hushed up; but a compensation is never given" ¹⁾).

The *Somal* often buy slaves whom they manumit soon afterwards ²⁾).

Among the *Tuareg* slaves are often set free on the death of their owners ³⁾).

Among the *Kafirs* of India each tribe is governed by a council. Even slaves can be elected as members of this council ⁴⁾).

Our survey of slave labour shows in the third place, that slaves are often employed in warfare. This will be accounted for later on.

Here we have only to emphasize the fact, that to pastoral tribes as such slave labour is of little use. This makes it easy to understand why so many of them dispense with slavery altogether.

Going on to inquire what is the cause of this phenomenon, we may remember the general conclusion we have arrived at in the last paragraph, viz. that slave labour is of little use, where subsistence is either dependent on capital, or very

1) Munzinger, *Ostaf. Stud.*, p. 309.

2) Paulitschke, I p. 260.

3) Letourneau, p. 253

4) Ujfalvy, *Les Aryens*, p. 352.

difficult to procure. Now it is easy to see that among pastoral tribes subsistence entirely depends on capital. Among people who live upon the produce of their cattle, a man who owns no cattle, i. e. no capital, has no means of subsistence. Accordingly, among pastoral tribes we find rich and poor men; and the poor often offer themselves as labourers to the rich ¹⁾.

Among the *Syrian Bedouins* „to every tent, or to every two or three tents, there is a shepherd or person to attend the cattle, either a younger son or servant, he receives wages for ten months” ²⁾.

Among the *Larbas* alms are given to the poor. The social rank of the head of a family depends on the number of his children, his practical knowledge of the pastoral art, and his wealth. There are free labourers who are paid in kind. Herdsmen have the usufruct of a part of the herds they tend. Generally the labourer takes a tenth in kind at the close of the time agreed upon; moreover he receives his daily food during the time of his engagement ³⁾.

Levchine, speaking of the *Kazak Kirghiz*, tells us: „Once I asked a Kirghiz, owner of 8000 horses, why he did not sell every year a part of his stud. He answered: „Why should I sell that which is my pleasure? I want no money; if I had any, I should be obliged to shut it up in a coffer, where nobody would see it; but when my steeds run over the steppe everybody looks at them; everybody knows that they are mine; and people always remember that I am rich.” In this manner is the name of a rich man acquired throughout the hordes; such is the wealth that procures them the regard of their countrymen and the title of *baz* (rich man), which sometimes gives them an ascendancy over the offspring of the khans and the most deserving old men.” On the other hand the number of beggars is very considerable. Levchine makes no mention of servants; but Radloff, who about thirty years

1) See Hildebrand, *Recht und Sitte*, p. 38

2) Burokhardt, I p. 182.

3) Geoffroy, pp. 420, 425, 434

later visited the Kazak Kirghiz, says: „There exists here a class of servants, whom I met with in every well-to-do family. The herds are generally tended by hired herdsmen, who are subjected to a kind of supervision.” The rich also engage poor families to till their lands. A man who loses all his cattle has no resource left but to offer himself as a labourer ¹⁾.

The same first-rate ethnographer informs us that among the *Altaians* „rich and poor eat the same kind of food; the difference consists only in the size of the kettle and the quantity of food. The poor man eats what he has got, which most frequently is very little; and he would starve but that the rich have such an abundance of food, that in summer they readily entertain whoever comes to their *jurts* (tents).” When a beast is being killed, the poor neighbours in large numbers throng towards the place and try to secure those portions of the bowels that the rich disdain; they have to fight for them with the dogs, who are equally fond of the tit-bits. When all guests have been served, pieces of meat are thrown towards the door, where poor men and dogs try to secure them. The picked bones are also thrown to the poor, who clean them so thoroughly that nothing but the bare bone is left to the dogs. The cattle of the rich are generally tended by poor neighbours, who live in the vicinity of the rich, partake of their food, and receive their worn clothes. Young girls often seek employment as servants; orphans of poor men also serve the rich ²⁾.

The *Turkomans* „have large herds and flocks, which they pasture in the steppes, and for this service they employ men of their tribe as herdsmen and shepherds”).

Among the *Kalmucks* there are many poor people who serve the rich as herdsmen ⁴⁾.

3) Featherman, IV p 290

4) Pallas as quoted by Hildebrand, Recht und Sitte, p 38

Prschewalsky states that rich *Mongols*, who own thousands of beasts, employ herdsmen who are poor and have no family ¹⁾.

Wood, speaking of the *Kirghiz* (whether Kazak Kirghiz or Kara Kirghiz does not appear), remarks: „Slaves are not common among this people, though they have, like European families, maid servants” ²⁾.

The *Kurds* of Eriwan employ freemen as herdsmen ³⁾.

Among the *Tunguz* the poor generally serve the rich, by whom they are badly treated ⁴⁾.

Pallas says: „Every *Samojede* has his reindeer and tends them himself with the help of his family, except the very rich who employ poor men as herdsmen.” Von Stenin also states that the poor serve the rich. The following anecdote, given by this writer, shows how strongly the desire of wealth influences psychical life among the Samojedes. One of them depicted the delight of intoxication in these terms: „Spirits taste better than meat. When a man is drunk, he fancies he has many reindeer and thinks himself a merchant. But on coming to his senses he sees that he is poor and has just spent his last reindeer in drinking” ⁵⁾.

Of the *Koryakes* we are told: „Before they were subjected by the Russians, they had neither government nor magistrates; only the rich exercised some authority over the poor.” Their greatest pleasure consists in looking at their herds. The poor are employed in tending the herds of the rich for food and clothing; if they have themselves some reindeer, they are allowed to join them to their master's herds and tend them together with the latter” ⁶⁾.

Among the *Tuski*, according to Georgi, the poor serve the rich as herdsmen ¹⁾).

In North-east Africa the state of things is not quite the same. The pastoral nomads here form the nobility, and tax subjected tribes with tributes and compulsory labour. Servants are not found here so often as in Asia. Sometimes, however, they are found. Thus among the *Beni Amer* there are herdsmen, maid-servants etc. who work for wages ²⁾).

„Among all *South African* natives” says Fritsch „the rich tyrannize over the poor who, in the hope of filling their stomachs, comply with a state of dependence that is not authorized by law” ³⁾).

Among the *Kaffirs* poor men place themselves under the protection of a rich head of a family, build their huts in his *kraal*, and in reward yield their cattle to him ⁴⁾).

The *Ovaherero* despise any one who has no cattle ⁵⁾). The children of impoverished families who, according to Anderson ⁶⁾), are kept as slaves, are perhaps rather to be called servants.

Among those tribes which are mainly agricultural, but besides subsist largely upon the produce of their cattle, similar phenomena present themselves.

Among the *Ossetes* freemen are often employed as servants ⁷⁾).

Among the *Betchuanas* the possession of cattle and a waggon is a mark of distinction. They mix their porridge with curdled milk, and therefore call a poor man a water-porridge man ⁸⁾).

The *Barotse* employ as herdsmen young slaves and sons of poor men ⁹⁾).

9) Holub, Süd-Afrika, II p 348.

Among the *Dinka* every man upon an average owns three head of cattle; but there are also poor men, who are the slaves or servants of the rich ¹⁾. We may safely infer that these „slaves or servants” are servants and not slaves.

The sheikh of each *Chillook* tribe, according to Chaillé Long, detains as slaves those who do not own even a single cow ²⁾ Probably the same state of things prevails here as among the Kaffirs. these poor men are not slaves, but compelled by hunger to seek the protection of a rich man.

In the country of the *Gallas* the value of labour is very little ³⁾.

The *Bogos* employ freemen as herdsmen and peasants; they also keep maid-servants ⁴⁾.

We see that, wherever men subsist by cattle-breeding, a peculiar characteristic of economic life presents itself. This characteristic is not the existence of wealth, for wealth also exists among the tribes of the Pacific Coast; yet on the Pacific Coast slave labour is of great use. It is the existence of poverty. On the Pacific Coast the „abundant natural supplies in ocean, stream, and forest” enable each man, be he rich or not, to provide for himself, but among pastoral tribes the means of subsistence are the property of individuals, and those who own no cattle have no resource but to apply to the owners for support ⁵⁾ Therefore, if labourers are wanted, there are always freemen who readily offer their services; and there is no great use for slave labour.

So there is always a supply of labour. On the other hand, the demand for labour is small There is but little work to be done. Among some pastoral tribes the men spend a great deal of time in idleness.

Prschewalsky, speaking of the *Mongols*, remarks: „Unlimited

1) Schweinfurth, I p 164

2) Chaillé Long, p 29

3) Paulitschke, I p 333

4) Munzinger, Bogos p 46

5) The cattle, among pastoral tribes, are the property of individuals, not of the community, see Daigun, pp 58—69

laziness is a main characteristic of the nomads; they spend their whole life in idleness, which is furthered by the character of pastoral nomadism. The tending of the cattle is the sole occupation of the Mongol, and this does not nearly require all his time. The guarding of cows and sheep is the business of the women and grown-up children; milking, creaming, butter-making and other domestic labour falls almost entirely to the share of the housewife. The men generally do nothing, and from morning till night ride from one *purt* to another, drinking *koumiss* and chattering with their neighbours. The chase, which the nomads are passionately fond of, serves mainly as a pastime."

The *Altaians* have to survey the cattle; this consists only in riding a few times a day to the herds, and driving them together. The milking of the mares during the summer, which requires some courage, is also the men's business.

Among the *Aeneze Bedouins* the men's sole business is feeding the horses, and in the evening milking the camels ¹⁾.

The *Kazak Kirghiz*, too, are very lazy. They pass a great part of the summer sleeping because of the warmth; and in winter-time they hardly ever leave their tents, because the snow covers the roads. As they are not acquainted with any arts, and the tending of the cattle is their only occupation, there is no need for much work ²⁾

The *Turkomans* „pass their time in idleness; and to engage in conversation about politics or plundering excursions, while the pipe is handed round, is the highest felicity of their earthly existence" ³⁾

Rowney tells us of the *Mairs and Meenas* of Rajpootana. „The ostensible occupation followed by them was that of goatherds, but the herds were usually left to the charge of their boys and old men, while the more able-bodied spent

1) Hildebrand, *Recht und Sitte*, pp. 37, 38 (after Prschewalsky, Radloff and Burckhardt) On the Mongols see also Iwanowski, p. 12

2) Levehine, p. 341

3) Featherman, IV p. 302

their time, mounted on their ponies, in marauding, plundering, and murdering" ¹⁾).

It has to be remarked, that most of these tribes do not keep slaves; so the men are not by imposing all the work upon slaves enabled to pass their time in idleness; yet they do almost nothing. This proves that but little labour is wanted. One might object, that perhaps women and boys are overworked. But the fact that the able-bodied men, who form a considerable part of the community, can afford to take life so very easily, sufficiently proves that the total amount of labour required is rather small.

Here we find one more reason why pastoral tribes have little use for slave labour. The demand for labour is small; therefore, even if free labourers were not available, only a few slaves would be wanted. Capital is here the principal factor of production, labour holding a subordinate place. Among agricultural tribes, when there is a practically unlimited supply of fertile soil, every person whose labour is available to the tribe can cultivate a piece of ground, and so, the more people there are, the more food can be produced. But among pastoral tribes, as soon as there are people enough within the tribe to guard the cattle, milk the cows, and perform the other labour required, an increase in the number of labourers is not profitable. There is only a limited demand for labour; therefore, though there may be a temporary scarcity of labour which makes strengthening of the labour forces of the tribe by means of slaves desirable, — when a few slaves have been procured, the point at which a further increase in the number of people gives no profit will soon be reached again ²⁾).

We see that among pastoral tribes little labour is required;

1) Rowney, p 51

2) The following remarkable statement tends to verify our argument. Among the Hottentots and Damaras men are „given away” If a Negro has for some time served a master, and the latter has no longer any employment for him, he gives him to some friend or acquaintance. The Negro complies with the transaction, for he wants a master and cannot subsist without one (Galton as quoted by Post, Afr Jur., I p. 97).

and such as is, is easy to procure; for there are always people destitute of capital, who offer themselves as labourers. Therefore slaves are economically of little use.

There is, however, one description of a pastoral tribe, in which it is stated, that men as well as women have to work very hard. This is Geoffroy's capital monography on the *Larbas*. The head of the family and his sons have to guard the herds, trace and dig pits, share in all operations common to the horsemen of the tribe: raids and battles, the pursuing of thieves, the defense of the pecuniary interests of the family, the depositing of merchandise in the *ksours* (store-houses). The head of the family tends the sick animals, and has the administration of the wool and grain; but practically he will not have much to do with these matters, not considering them worth his attention. But a great part of his time is taken up with keeping watch and marching, and this makes his life a rather hard one *c'est un peu toujours comme la guerre*. He does not sleep at night; he waters the cattle in the pits or *r'dirs*; he surrounds his tents with a protecting hedge, the *zirba*; he struggles against the elements, which often disperse beasts, tents and men. Daily, from the cradle to the tomb, the nomad's life is a struggle for existence. As a child he is already concerned in the care taken of the cattle in the tents; he learns to ride on horseback with his father. When older, whether rich or poor, he has to learn, for several years, to conduct large numbers of cattle, which is a very difficult and dangerous work, to tend the different kinds of animals, to cure them, to sell them, to derive from them as much profit as possible. Pastoral art is more complicated than at first sight it seems, and comprehends a long series of accomplishments. At twenty years the nomad is an accomplished man, thoroughly acquainted with the life he has to lead, enjoying all the physical strength indispensable in the exceptional *milieu* where he has to struggle. The two youngest sons of the head of the family our informant describes, 15 and 13 years of age, now perform in the family the duties of herdsmen. Daily occupations of master and slaves are the driving together of the

dispersed animals, the tending of the females that have calved, the preparing of special food for the young animals, the dressing of the stronger ones for the saddle and pack-saddle, and the chase of hares and gazelles¹⁾).

We see that pastoral life is not so easy here as on the fertile plains of Central Asia. But the work that is most necessary here, and also most difficult, is the care for the security of the tribe and its possessions, or, as Geoffroy very appropriately expresses it, „*c'est un peu toujours comme la guerre*”. And this work cannot be left to slaves; else the slaves would become the masters of the tribe. Warriors are wanted here; labourers not so much.

We have now accounted for the non-existence of slavery among many pastoral tribes, and the little use of slave labour among pastoral tribes in general, by the principle laid down in the last paragraph, that, generally speaking, slaves are not wanted where subsistence depends upon capital.

In *North-east Africa*, however, there is one more cause at work, making slavery superfluous. This is the existence of a kind of *substitute for slavery*, viz *subjection of tribes as such*. Pastoral tribes often levy tributes on agricultural tribes, to which they are superior in military strength; the latter cannot easily leave the lands they cultivate and seek a new country; if not too heavily oppressed, they will prefer paying a tribute. And to pastoral nomads the levying of a tax on agricultural tribes brings far more profit than the enslaving of individuals belonging to such tribes, whom they would have to employ either in pastoral labour, which they do not want, or in tilling the soil, which work the nomads would be unable to supervise. There are also pastoral tribes subjected by other pastoral nomads, the latter forming the nobility and the military part of society. Finally we find subjected tribes of hunters, smiths, etc.; here we have sometimes rather to deal with a voluntary division of labour.

The *Somal* have several paria castes. Among the Wer-Sin-

1) Geoffroy, pp 429—431.

gellis in North Somaliland we find the following: 1°. *Midgân*, smiths and traders; these, by acquiring considerable wealth, sometimes win so much regard, that even a Somali noble deigns to marry his daughter to a *Midgân*. 2°. *Tómal*, who are employed by Somali nobles as servants, herdsmen and camel-drivers, and are also obliged to go to war. The noble *Wer-Singelli* carries sword and spear, whereas the *Tomali* uses bow and arrows; sometimes a *Midgân* girl is given him as a wife, but never the daughter of a noble Somali. The *Tómal*, however, belong to the tribe. 3°. *Jibbir*, who are very much despised. They have no fixed habitations; they roam in families over the country, from tribe to tribe, as jugglers and magic doctors. Everybody, for fear of sorcery, gives them food and presents, and in return receives from them amulets, made of stone and roots. They contract no marriage outside their own caste ¹⁾).

The *Massai*, true warriors and raiders, „keep a subjected tribe, the *Wa-rombutta*, who do their hunting and what meagre agriculture they indulge in. This tribe is insignificant in appearance, and although servile and subject to the *Massai* are not slaves; they present almost the appearance of dwarfs.” The *Wandorobo* too, according to Thomson, are regarded by the *Massai* as a kind of serfs, and treated accordingly; and Johnston calls them a helot race of hunters and smiths ²⁾).

Among the *Bogós* „patronage results from military subjection or from the helpless state of separate immigrants with regard to a strong and closely allied people. As the nobles carefully trace their pedigrees, it is easy to find out the *Tigres Tigre* means a man of Ethiopian extraction, who speaks the *Tigre* language. Some *Tigre* families, subjected from time immemorial, have immigrated together with the family of *Gebre Terke* [the legendary ancestor of the *Bogós*]. Others lived already in the country, and unable to withstand the invasion, hastened

1) Hildebrandt, *Somal*, p. 4

2) Mrs. French-Sheldon, p. 380 Thomson, *Through Masailand*, p. 448, Johnston, p. 402

to submit in order to be tolerated. The Bogos seem to have taken possession of the country in a very pacific and forbearing way, and unlike the Normans and other European invaders, do not interfere with the regulation of landed property, so that the ancient aborigines still own most of the land. The third class is composed of foreign families who, being for some reason unable to agree with their countrymen, settle in the country of the Bogos and place themselves under their protection, which still continually occurs. A member of the Boas family [i. e. of the Bogos nobility], however poor and weak, never becomes a Tigre; his family is a guarantee of his independence. A Tigre, however mighty and rich, cannot become a Schmagilly [noble]; for the Tigres, who are a compound of various elements, cannot trace their origin so far back as the Schmagillies who pretend to spring all from the same ancestor. Moreover, the oppression is so slight, that a revolution is unimaginable ¹⁾.

Among the *Takuc* the state of the Tigres is the same as among the Bogos; formerly they brought beer to their lords; now they pay them a small tribute of corn and fat ²⁾.

Marea Tigres have a harder lot. Two kinds of obligations are incumbent on them. towards their respective masters, and towards the nobility *en bloc*. Even the poorest noble never becomes a Tigre, and does not perform degrading work, such as for instance milking. The Tigre pays his master yearly 8 bottles of fat, a measure of corn, and every week a leathern bag with milk. Of every cow killed by a Tigre the master receives a considerable portion; a cow belonging to a Tigre, which dies a natural death, falls entirely to the master. As for the Tigres' obligations towards the nobility as a whole, on several occasions they have to give up their cattle for the nobility. Among the Black Marea the Tigres own most of the land; among the Red Marea the greater part of the land is in the hands of impoverished nobles, who live chiefly upon the

1) Munzinger, Bogos, pp 48, 49

2) Munzinger, Ostafri. Stud., p 207

rent of their landed property. Another class are the *Dokono*, who are obliged to choose a patron and pay a tribute, but are held in rather high esteem and often marry daughters of the nobles; they own land and herds and are much given to trading ¹⁾.

Among the *Beni Amer* the same distinction, of nobles and subjects, prevails. The latter are called *Woréza*. „We shall speak of master and servant,” says Munzinger „though the latter term does not quite answer the purpose. The state of things we are going to describe much resembles that which we have met with among the aristocrats of the Anseba; among the Beni Amer, however, the servant is a fiefholder rather than a protégé. But as he derives his wealth from his master, to whom he owes what we may call interest, his state is one of much greater dependence Among the Beni Amer it is an ancient custom, that a lord distributes his wealth among his servants, e. g. if he receives 100 cows as his portion of the war-booty, he does not add them to his herd, but leaves them to his servants as a present. When the servant marries, the lord presents him with a camel. In every emergency the servant applies to his lord, who helps him whenever possible. All these presents become the true property of the recipient; the servant may do with them as he likes, sell and even spend them, the lord may upbraid him for it, but legally has nothing to do with it. On the death of the servant the presents devolve upon his heirs. But the lord has a kind of usufruct of these presents; the servant provides him with fat and daily brings him a certain quantity of milk, i. e. he feeds the lord and his family. Often has the lord to wait for his supper till midnight, because the servant provides for himself first. The servant, moreover, has to provide the funeral sacrifice for his lord and for every member of the latter's family; he leaves to the lord every sterile cow, and when he kills a beast he brings him the breast-piece. He stands by his lord in every emergency, and even assists him according to his means towards paying the

1) Ibid., pp 235—242.

tribute." The servant is, so to speak, a tenant of his lord. As the Beni Amer are nomads, there is no land to distribute; the pasture has no owner; therefore the fief can only consist in movable property. As most of the wealth of the country is in the hands of the servants, they have a decisive voice in every public council; they have to find out where the best pastures are, where the camp has to be erected ¹⁾.

Similar phenomena present themselves outside North-east Africa.

In the second Chapter of Part I we have met with subjected tribes in *South Africa*, such as Fingu, Makalahiri, etc., sometimes called slaves by our ethnographers ²⁾.

The *Moors of Senegambia* are also the patrons of subjected tribes, which they protect and levy heavy tributes on ³⁾.

Geoffroy speaks of settled tribes being in some way the vassals of the *Larbas*. The *ksours* are buildings in which the nomads preserve their corn, dates and wool; these stores are guarded by settled tribes, that permanently live there and receive one tenth of the preserved stock yearly. The nomads look upon all settled tribes as degenerate men and inferiors ⁴⁾. Here we have to deal with a voluntary division of labour, rather than with subjection.

Among the *Tuareg* slavery proper does not prevail to any great extent. There are two kinds of tribes, one consisting of nobles and the other of serfs. The nobles only have political rights. The serfs work to feed the ruling classes, and from 4 to 8 serfs are wanted to support one noble. The nobles pass their time travelling in the desert, either to escort or to plunder caravans; the serfs, in the meantime, cultivate the oases and rear sheep, goats and camels. They also tend the herds belonging to the nobles, to whom they pay a yearly tribute of butter, milk, sheep, goats and camels. The serfs are sometimes richer than the nobles. The nobles let them enrich them-

1) Ibid, pp 311, 312, 316, 317

2) See above, pp 140-144

3) Béranger-Féraud, pp 70, 71

4) Geoffroy, pp. 412, 414, 415

selves, requiring nothing from them but the yearly tribute. These tributes, together with those levied on caravans, form the revenue of the Tuareg nobles. The serfs may not wear the same dress nor carry the same weapons as the nobles. Yet nobles and serfs generally live together in perfect harmony. But the free, nomadic Tuareg show a great disdain for the settled and rural population; they consider their own nomadic life, chiefly taken up with escorting or plundering caravans, as particularly noble; and regard the settled tribes as degenerate beings ¹⁾.

In *Circassia*, according to Bell, the serfs are prisoners of war and the ancient inhabitants of the country. The latter are perhaps the same peasants who, according to Klaproth, may not be sold apart from the land ²⁾.

It is remarkable, that in Central Asia and Siberia we do not find a single instance of this subjection of tribes as such). This is probably the reason why in these parts members of the tribe are so often employed as servants.

Where nearly all work is left to subjected tribes or castes, and the nobles do nothing but fight, there is not much use for slave labour. The nobles do not want slaves, because all labour required by them is performed by their subjects.

We have now found a new cause, from which in some cases slaves are not wanted: the subjection of tribes as such, which serves as a substitute for slavery.

§ 2. *Slavery among pastoral tribes.*

Yet several pastoral tribes keep slaves; this has still to be accounted for. We shall inquire first, whether the *secondary causes* we have found in the last paragraph are at work here.

1) Letourneau, pp 252 254

2) Bell, I, p 337. Klaproth, p 567

3) It is stated, that the nomadic Koryakes regard the settled Koryakes as slaves (*Histoire de Kamtschatka*, II p 223) But we are not told that they require tributes or services from them. Probably our informant only means to say, that the settled Koryakes are despised by the nomads (see p 222, *ibid*)

1°. *Condition of women.* On the Pacific Coast the men sometimes procure slaves, in order to relieve the women of a part of their task. There are some details on record suggestive of the same state of things among some pastoral tribes. Among the Circassians, Beduan, Fulbe and Tuareg (pastoral tribes), Waganda, pirate-tribes of Mindanao and Sulu, Ossetes and Gallas (agricultural tribes depending largely on cattle for their subsistence) slaves are employed for household labour. The same is the case with female slaves among the Larbas and Somal of the towns. Munzinger states that only few Beduan are rich enough to keep a female slave or a maid-servant; therefore in most families the preparing of food falls to the share of the wife, this being almost her only occupation¹). Hence we may infer, that among the Beduan, and probably among some other tribes, slaves are procured by the men for the benefit of the women.

2°. *Preserving of food.* This does not seem to require much labour among pastoral tribes. On the Pacific Coast the fish have to be prepared for winter use. But where men live upon the products of their cattle, food is not at one time much more abundant than at another.

3°. *Trade and industry.* Household labour, sometimes performed by slaves, does not seem to serve the purposes of trade, as on the Pacific Coast; there is not a single detail on record, that would lead us to suppose that it does. We even find particulars tending to prove the contrary. Among the *Beni Amer*, who have many slaves, the women are continually occupied in making mats, the proceeds of which labour are often sufficient to pay the tribute to the Turks²). Slaves do not seem to join in this labour.

Among the *Larbas* free women manufacture tissues, which are sold abroad³). Probably slaves are not capable of performing such fine work.

1) Munzinger, *Ostaf. Stud.*, pp. 149-150

2) *Ibid.*, p. 327

3) Geoffroy, p. 432.

Among the *Yorubas* and *pirate-tribes of Mindanao and Sulu* the slaves are occupied in trading. But these tribes are not nomadic; moreover, these slaves do not, like the slaves on the Pacific Coast, prepare the articles of commerce, but are themselves the traders, which is quite another thing.

4°. *Slaves wanted as warriors.* Slaves sometimes serve to augment the military strength of the community. From the survey of slave labour, given in the beginning of this Chapter, it appears that they are often employed in warfare, viz. among the nomadic Somal and Danakil, Fulbe, Kafirs, pirate-tribes of Mindanao and Sulu, Mandingos and Yorubas; probably also among the Bogos, where they generally take to robbery. Circassian slaves cannot be compelled to go to war¹⁾. Hence it seems to follow that they may go if they like. Among the Beni Amer native-born slaves are avenged by their own relatives; so these slaves are armed, and probably fight together with their masters.

The ensuing statement strikingly shows how highly slaves are valued as warriors among the nomadic Somal and Danakil. If a slave kills one enemy, he becomes free; if two or more, he is entitled to being adopted. Having killed ten enemies, he becomes a person of rank and enjoys many privileges²⁾.

In these cases slaves strengthen the military force of the tribe. But the tribe profits only indirectly by this reinforcement of the family. Most pastoral nomads live in comparatively small groups, rather independently; there is no strong central government³⁾. And where quarrels between these small groups are frequent, the more numerous the family (in the wider sense, the Roman *familia*, including slaves), the better will the head of the family be able to maintain his position. And pastoral nomads have always a great motive for fighting. they can enrich themselves by a successful raid. Among hunting,

1) Bell, I p 170

2) Paulitschke, I p 263

3) Several instances of this phenomenon are on record with Hildebrand, *Recht und Sitte*, pp. 30, 40, 41

fishing, and agricultural tribes, if the conqueror does not want to keep the vanquished as slaves, war gives little profit. But in the raids pastoral nomads make on each other, the successful raider may acquire numerous herds, i. e. great wealth. Therefore it is of the utmost importance for a man to have as numerous a *familia* as possible.

When speaking of the *Larbas*, we have seen that their mode of life is *un peu toujours comme la guerre*. Their describer also states: „Theft is the most threatening evil the nomad has to deal with; he is therefore most severe in suppressing it, the punishment being invariably death.” He also speaks of free servants, members of the family, who live under the protection and at the expense of some rich head of a family; they are generally very numerous, and form a body of clients that strengthens their patron’s power¹⁾.

Levchine, speaking of the *Kazak Kirghiz*, says: „Their feuds are caused by the unrestrained desire for plunder, that ruins and entirely demoralizes them; this plundering is called *baranta*. These *barantas* consist in reciprocal cattle-stealing, from which often bloody combats result And we must not think that public hatred or contempt falls on those who are addicted to these horrible excesses; on the contrary, they enjoy a reputation for bravery, and are distinguished by the name of *Batyr* or *Boghatyr*, which name spreads through all the hordes the fame of their exploits. Many of these braves, called *Batyr* for their plundering ardour, though many years dead, still live in the remembrance of their countrymen, and their names are celebrated.” Accordingly, one of the qualities required in a chief is a large family, that gives him the power to maintain his authority²⁾

Among the *Bem Amer*, where it seems to be quite an ordinary thing for a noble to receive 100 cows as his portion of the war-booty, it is a great support for a man to have

1) Geoffroy, pp 425, 422, 441

2) Levchine, pp 349, 350, 397

many children, as in these countries family is opposed to family ¹⁾.

A writer of the 18th century tells us that „the *Tschuktschi* who live to the north of the river Anadir, are not subjected to the Russian empire, and often make raids on those brought under Russian control, on the Koryakes as well as on the *Tschuktschi*, killing or making prisoners all they meet, and carrying off their herds of reindeer” ²⁾.

Among the *Somal* and *Gallas* internal wars are very frequent; among the former most wars are marauding expeditions. And here too the possession of wife and children is indispensable; an unmarried man cannot attain to wealth and power ³⁾.

Among the *Ama-Xosa* and *Ovaherero* the chief object of warfare is cattle-stealing. Fugitives from other tribes are never delivered up by the *Ama-Xosa*, whatever the reason of their flight; for they strengthen the chief's power ⁴⁾.

We have already seen, that the *Massai* are „true warriors and raiders”, that the *Mairs* and *Meenas* spend their time in „marauding, plundering and murdering,” and that politics or plundering excursions are the chief subjects of *Turkoman* conversation ⁵⁾.

We see, that among these tribes everybody is desirous of having as many people about him as possible for the protection of his own property and the capturing of his neighbour's. And a convenient means of procuring such people is the purchase of slaves.

There is one more secondary cause here, which we have not met with before. It is sometimes stated that keeping slaves is a mere *luxury*. Now rich nomads, like all rich people, love luxury. Like the rich Kazak Kirghiz who told Levchine that the possession of over 8000 horses procured him a reputation

1) Munzinger, Ostaf. Stud., pp. 341, 327.

2) Histoire de Kamtschatka, II p. 218.

3) Paulitschke, I pp. 254, 195

4) Fritsch, pp. 79, 226, 93

5) See above, pp. 274, 275, 278

among his countrymen, many rich nomads will win renown by possessing a large retinue of slaves. Thus for instance we know that among the Beni Amer slave labour is of little use; yet it is stated, that the Beni Amer are ambitious to possess many slaves ¹⁾. And slaves are preferable, as objects of luxury, to free servants. For slaves, generally acquired from beyond the limits of the tribe, are much more apt to gratify the pride of the rich man by their submission, than poor freemen, who are always conscious of their membership of the tribe and unwilling to be trampled down. The latter fact is proved by several statements of ethnographers.

If a rich *Samojede* refuses to give his poor countryman a reindeer for food, the latter has the right to carry off one or more from the rich man's herd; the law does not give the owner any hold upon him ²⁾.

Among the *Yakutes* the rich sustain their poor fellow-tribesmen; if the latter lose their reindeer, they are indemnified by the rich ³⁾.

Similarly among the *Ostyaks* „members of the same tribe, whether large or small, consider themselves as relations, even where the common ancestor is unknown, and where the evidence of consanguinity is wholly wanting. Nevertheless, the feeling of consanguinity, sometimes real, sometimes conventional, is the fundamental principle of the union. The rich, of which there are few, help the poor, who are many. There is not much that can change hands. The little, however, that is wanted by the needy is taken as a right rather than a favour” ⁴⁾.

The *Altaians* are very sensitive about their liberty. „Every poor man who joins a rich family considers himself a member of it. He will perish of hunger, rather than comply with a demand of his rich neighbour made in a commanding tone” ⁵⁾.

1) Munzinger, Ostasfr Stud., p. 310

2) Von Stenin, Samojeden, p. 187

3) Muller, Unter Tungusen und Jakuten, p. 173

4) Latham as quoted by Spencer, Deser. Soc., V p. 16

5) Radloff, Aus Sibirien, I p. 312

Licata tells us that hungry *Danakil* go to their chief and say: „I am hungry, give me something to eat” ¹⁾).

Among the *Larbas* free labourers „work for one more fortunate than themselves, but not for a superior; for notwithstanding the relation of employer and employed, equality prevails ²⁾).

It is easy to understand that slaves are preferred to such servants. Only in one case is this preference mentioned by an ethnographer. Munzinger states that the slaves bought by the rich *Beduan* for household labour are generally more trusted than ordinary servants, as they are riveted to their position ³⁾. But we may safely suppose that in other cases this circumstance has furthered the growth of slavery.

We have explained why pastoral tribes have no great use for slave labour. We have also mentioned some motives that may induce such tribes to keep slaves. But the fact has not yet been accounted for, that some pastoral tribes keep slaves and others do not. Whence this difference? It has been shown that slavery does not only exist among pastoral tribes that till the soil to a limited extent. Among all pastoral tribes subsistence is dependent on capital. Wealth, too, exists among all these tribes ⁴⁾; and we cannot see why slaves, as a luxury, would be wanted by one such tribe more than by another. As slaves are sometimes employed as warriors, we might be inclined to suppose that slavery exists among all warlike tribes, and among these only. But there are several pastoral tribes which, though very warlike, do not keep slaves: Kazak Kirghiz, Turkomans, Massai, and the pastoral nomads of South Africa. Therefore there must be other causes.

In chapter II we have spoken of *external causes*: it may be

1) Licata as quoted by Paultschke, I p 253

2) Geoffroy, p. 434

3) Munzinger, Ostafri Stud , p 154

4) Even among the simple Todas, for it is stated, that the decision of their disputes by the priest is „generally given in favour of the wealthiest of the litigants” Metz as quoted by Spencer, Descr Soc , V p. 12.

that slaves would be of great use, and yet cannot be kept, because the coercive power of the tribe is not strong enough. We have also seen that this coercive power is most strongly developed where men have fixed habitations, live in rather large groups and preserve food for the time of scarcity, and where there is a group of somewhat homogeneous tribes maintaining constant relations with each other. Pastoral tribes are nomadic, do not live together in very large groups, and do not want to preserve food, for they have their supply of food always at hand. Yet the fact that several pastoral tribes keep slaves proves that at least among these the coercive power is strong enough. We shall try to find a cause peculiar to these tribes, that enables them to keep slaves. Now it is remarkable that our positive cases are all found in a few definite parts of the globe: North-east and North-west Africa, the Caucasus, and Arabia, whereas the pastoral nomads of Siberia, Central Asia, India, and South Africa do not keep slaves. And the parts where slavery exists are exactly those where the slave-trade has for a long time been carried on on a large scale. Accordingly, the slaves these tribes keep are often purchased from slave-traders and in several cases belong to inferior races.

The slaves of the *Anczi Bedouins* are Negroes ¹⁾).

The slaves kept by the *Larbas* are Negroes purchased from slave-trading caravans ²⁾).

Although we find no description of slave-trade among the *Circassians*, slaves in the Caucasus are exported on a large scale ³⁾

Most slaves found among the *Somal* and *Danakul* are articles of transit trade: they are purchased from interior tribes and intended to be sold to Arabians. A Somali never becomes the slave of a Somali, and prisoners of war are not enslaved ⁴⁾).

1) Burckhardt, I p. 356

2) Geoffroy, p. 440

3) Chantre, IV pp. 79-136

4) Pauhtschko, I p. 260.

Many *Beduan* make it their business to steal slaves, whom they sell in Massowah ¹⁾).

The slaves kept by the *Beni Amer* are either captured from enemies or purchased abroad; a Beni Amer never loses his freedom. Slaves are not, however, often sold abroad ²⁾).

The *Fulbe*, in Lander's time, carried on an extensive trade in slaves. Timbuctu was a great centre of the slave-trade, whither Arabians came to purchase slaves, whom they sold in the Barbary States and even in Turkey ³⁾).

The slaves of the *Moors of Senegambia* are „blacks acquired by force or for money” ⁴⁾).

The slaves kept by the *Tuareg* are also Negroes ⁵⁾).

On the other hand, the pastoral tribes of Central Asia, and especially those of Siberia and South Africa, live in secluded parts, far from the centres of the slave-trade.

The slave-trade greatly facilitates the keeping of slaves. Where slaves are brought by slave-dealers from remote parts, it is much easier to keep them than where they have to be captured from enemies, i. e. from the neighbours; in the latter case the slaves are very likely to run away and return to their native country; but a purchased slave transported from a great distance cannot so easily return; if he succeeded in escaping, he would be instantly recaptured by one of the foreign tribes whose countries he would have to traverse. Moreover, the slave-keeping tribes may, by their intercourse with slave-traders, have become familiar with the idea of slavery, and so the slave-trade may have suggested to them the keeping of slaves for their own use.

There is another circumstance we have already hinted at, which may partially account for the existence of slavery among some of these tribes: the slaves are often Negroes. And Negroes

1) Munzinger, *Ostafri Stud.*, p. 155.

2) *Ibid.* pp. 308, 311

3) Lander, II pp. 298, 154

4) Bérenger-Féraud, p. 72

5) Letourneau, p. 252.

have always and everywhere been enslaved; they seem to be more fit for slaves than most races of mankind. Moreover most of these slave-keeping tribes are Semites and Hamites, and therefore look upon the Negroes as an inferior race. Now, where slaves are procured mainly for military purposes (and we have seen that this is often the case with pastoral tribes) an absorption of foreigners into the tribe would answer the purpose as well as, and perhaps better than, slavery. But where the foreigners belong to inferior races, the members of the tribe are not likely to intermarry with them and look upon them as their equals; they remain slaves, though they are not of great use as such. We must also take into consideration that inferior races are not so much to be dreaded as superior peoples; the latter, of individuals belonging to them were kept as slaves, might retaliate upon the slave-owners. This may have been the reason why the Kazak Kirghiz who, in Levchine's time, kidnapped many Russians, always sold them abroad: it would not have been safe to keep them as slaves. Accordingly, Pallas states that in his time they used to kidnap men on the Russian frontiers towards the time when they were going to remove with their herds, so that they could not be pursued ¹⁾).

In the second Chapter of this Part we have remarked that the growth of slavery is furthered by the existence of a group of more or less similar tribes, the slave-trade being in such cases the means of spreading slavery over the group. We may say now that, whether such a group exists or not, the slave-trade facilitates the keeping of slaves. When the coercive power of a tribe is not strong enough for the keeping of prisoners as slaves, the slave-trade may enable such a tribe to keep slaves; for the keeping of purchased slaves, brought from a great distance, does not require so much coercive power.

We see that the difference between the slave-keeping and the other pastoral tribes consists in external circumstances. Pastoral tribes have no strong motives for making slaves, for

1) Pallas, Reise, I p 337

the use of slave labour is little. On the other hand, there are no causes preventing them from keeping slaves. These tribes are, so to speak, in a state of equilibrium; a small additional cause on either side turns the balance. One such additional cause is the slave-trade; another is the neighbourhood of inferior races. There may be other small additional causes, peculiar to single tribes. We shall not inquire whether there are; it would be of little interest to know them. We shall content ourselves with having dispelled the mystical belief, that the taming of animals naturally leads to the taming of men, and shown what is the relation between capital and labour among pastoral tribes.

Recapitulating we may remark that our general theory, that there is no great use for slave labour where subsistence depends on capital, is fully verified by our investigation of economic life among pastoral tribes.

Two secondary internal causes found in the second Chapter have been also met with among pastoral tribes: slaves are sometimes employed in warfare, and sometimes for domestic labour to relieve the women of their task. Two new secondary causes have been found in this Chapter: slaves are kept as a luxury, and sometimes the subjection of tribes as such, serving as a substitute for slavery, makes slavery proper superfluous.

With regard to the external causes it has been shown that the coercive power of pastoral tribes is not very strong, as they are nomadic and live in rather small groups; but this want is sometimes compensated for by the slave-trade and the neighbourhood of inferior races. The two latter circumstances may therefore rank as new external causes, the slave-trade taking the place of the existence of a homogeneous group. On the Pacific Coast it is the trade between tribes of the same culture, among pastoral nomads it is the trade with Arabia, etc.; but in either case it is the slave-trade that furthers the growth of slavery.

Recapitulation of the causes we have found up to the present.

| | Positive. | Negative. |
|----------------------------|--|--|
| I. Internal causes. | | |
| A. General. | 1 ^o . Subsistence easily acquired and not dependent on capital. | 1 ^o Subsistence dependent on capital. 2 ^o . Subsistence not dependent on capital, but difficult to procure. |
| B. Secondary economic: | 1 ^o . Preserving of food. 2 ^o . Trade and industry. 3 ^o . A high position of women. | 1 ^o . Female labour making slave labour superfluous 2 ^o . Subjection of tribes as such. |
| C. Secondary non-economic: | 1 ^o . Slaves wanted for military purposes. 2 ^o . Slaves kept as a luxury. | 1 ^o . Militarism making slavery impossible. |
| II. External causes: | 1 ^o . Fixed habitations. 2 ^o . Living in large groups. 3 ^o . Preserving of food ¹⁾ . 4 ^o . The slave-trade. 5 ^o . The neighbourhood of inferior races. | |

1) »Preserving of food" occurs twice, because it works in different directions

CHAPTER IV — AGRICULTURAL TRIBES

§ 1. *Numbers of positive and negative cases among the three agricultural groups.*

The list given in § 3 of the first Chapter of this second Part contains the following numbers of agricultural tribes with and without slaves, classified according to the division into three groups we have made in § 2 of the same Chapter:

First agricultural group¹⁾.

§ 2. *Development of agriculture and development of slavery.*

What do these numbers teach us?

In the first place we see that many (133) agricultural tribes keep slaves. Hence it appears that slavery is by no means incompatible with agriculture. But there are also many (86)

agricultural tribes without slaves, so the existence of agriculture among savage tribes does not necessarily lead to the keeping of slaves.

In the second place it appears that the more agriculture is developed, the more frequent slavery becomes. Looking at the purely agricultural tribes, i. e. those among which subsistence does not depend to any considerable extent on cattle-breeding or trade (a^1 , a^2 , a^3), we find that in the first group there are 24 positive and 31 negative cases, i. e. 43,6 per cent. of these tribes keep slaves. In the second group the corresponding numbers are 50 positive cases, 42 negative cases, and 54,3 per cent.; in the third group 13 positive and no negative cases, and 100 per cent. We see that in the second group slavery is somewhat more frequent than in the first, whereas in the third group it is universal. It has, however, to be taken in consideration, that the great majority (11 out of 13) of the tribes belonging to the third group live in the Malay Archipelago, and 5 out of these 11 are divisions of the Battaks. We may not, therefore, attach much importance to the numbers relating to the third group; for they may be strongly influenced by local circumstances. Taking the second and third group together we find 63 positive and 42 negative cases, i. e. 60 per cent. keep slaves, which percentage is considerably higher than that of the first group.

We do not claim mathematical exactness for these numbers. But at any rate we may say that they sufficiently prove, that slavery is considerably more frequent among true agricultural tribes, which subsist chiefly by agriculture, than among incipient agriculturists, who still depend on hunting or fishing for a large portion of their food.

The total numbers lead to the same conclusion. Looking at these we find in the first group 31 positive and 36 negative cases, i. e. 46,3 per cent. keep slaves. For the second group the corresponding numbers are 82 pos. cases, 48 neg. cases and 63,1 per cent; for the third group 20 pos. cases, 2 neg. cases and 90,9 per cent; for the second and third group taken together 102 pos. cases, 50 neg. cases and 67,1 per cent.

This agrees with what we expected. The tribes belonging to the first group, the „hunting agriculturists” (*Jägerbauern*) as Dargun calls them, bear a strong resemblance to hunting tribes. Generally the men’s business is hunting and warfare, whereas the women have to till the soil. The division of labour between the sexes does not much differ here from that which exists in Australia, where the men hunt and the women gather fruits and dig roots. These tribes are also often nomadic: when the fruits of their fields are scarcely ripe, they reap them and remove to some other place¹⁾.

The best specimens of this type are found in South America.

Azara, a careful observer, speaking of the Indians living in and around Paraguay, remarks: „Even the agricultural tribes are more or less nomadic. Wherever the Indians pass they sow something, and later on return to reap the fruits”²⁾.

Lery, a writer of the 16th century, tells us that among the Tupinambas the principal cultures were two roots, which he calls *aypi* and *maniot*. They were cultivated by the women. After being planted the roots needed no further care, and within 2 or 3 months were fit to be dug up. Maize was also cultivated by the women. The Tupinambas depended on hunting and fishing for a considerable portion of their food. They did not generally remain for longer than 5 or 6 months in one place, but were always removing from one place to another, carrying their house-building materials with them³⁾.

Von den Steinen, describing the tribes on the Upper Schingu (in Brazil), states that, though largely subsisting on agriculture, they are psychically hunters rather than agriculturists. As everywhere in Brazil, the women not only prepare the food, but cultivate the manioc. The men cultivate nothing but tobacco, the smoking of which is their exclusive privilege⁴⁾.

1) Cunningham (English Industry, I p. 31) remarks that „primitive agriculture is perfectly consistent with a very migratory life”

2) Azara, II p. 160

3) Lery, pp. 123, 127, 141—175, 312

4) Von den Steinen, pp. 201, 214

We have seen (in Chap. II of this second Part) that hunters hardly ever keep slaves; and as the „hunting agriculturists” so much resemble true hunters, it is easy to understand why among the majority of them slavery does not exist. Slaves cannot be employed for hunting, and the women can easily perform the small amount of cultivation wanted by these tribes. Moreover the men who, as warriors, are able to procure slaves, are not likely to take them for the sole benefit of the women. And where the men are always hunting, the women would have to supervise the slaves and keep them in order, which is not very easy for them.

Yet there are a considerable number of positive cases in our first group (24 out of 55). We will, of course, make due allowance for mistakes; there may be several tribes contained in our first group which on closer scrutiny would prove to be true agriculturists and not *Jagerbauern*. But we cannot think but that among these 24 tribes there are many, which have been justly placed in the first group. The existence of slavery among them will have to be accounted for by secondary causes, internal and external, such as we have found in the foregoing Chapters and of which we shall perhaps find some more in the continuation of this Chapter.

We must, however, bear in mind that our first group does not only contain „hunting”, but also „fishing agriculturists”; and we know that fishers are more likely to keep slaves than hunters. This may perhaps account for the existence of slavery among some of these tribes. But our numbers give us no hint in this direction. We find, indeed, that one half of our positive cases belong to the Malay Archipelago; but among these there are several Dyak tribes living in the interior of Borneo. Moreover South America affords 6 positive, and the Melanesian islands 7 negative cases. We may suppose that whatever effect this factor has is neutralized by the intervention of other circumstances.

Of the truly agricultural tribes $\frac{3}{5}$ keep slaves. Whether this is due to the general state of agricultural societies, or to secondary causes, will appear from the next paragraph.

§ 3. *Capital and labour among agricultural tribes.*

We have seen that among the purely agricultural tribes of the second and third stages there are altogether 63 positive and 42 negative cases, i. e. three-fifths of them keep slaves. These numbers make it probable, that the existence of slavery among so many agricultural tribes has to be accounted for by a general cause, that agricultural life as such is favourable to the growth of slavery. We have to inquire now, whether this supposition is justified by an application of the general principle laid down in § 6 of the second Chapter, i. e. whether among agricultural tribes subsistence is dependent on capital, and if not, whether it is easy or difficult to procure.

It appears that, where agriculture is carried on without the aid of domestic animals, subsistence does not depend on capital. Even the European agriculturist of to-day often wants little capital besides his cattle; and this applies *a fortiori* to the savage agriculturist, who is unacquainted with the more perfect and costly agricultural implements used in Europe, and who, where population is scarce (as it is among most savages) cultivates only such grounds as are most fertile and easiest of access. Even the plough is used by very few savages; they most often content themselves with a pointed stick or hoe, wherefore Hahn calls the agriculture carried on by them hoe-culture (*Hackbau*) as distinguished from agriculture proper (*Ackerbau*)¹⁾. And even where agriculture is carried on in a more skilful manner, e. g. by means of irrigation, it is not capital that is wanted, but labour. The construction of the irrigation-works may be a long and laborious task, but the materials cost nothing. There is only one instance in which we have found it stated that agriculture cannot well be carried on without capital. Radloff tells us that the Kazak Kirghiz, besides rearing cattle, are largely agricultural. Some fields want constant irrigation, and the water is very difficult to procure.

1) Hahn, *Die Haustiere*, pp 388 sqq.

The rich use a paddle-wheel; the poor bring the water to their fields in buckets and wooden vessels, but this is of little avail. Therefore it is only the rich who are capable of carrying on agriculture to any considerable extent ¹⁾. But this state of things had not yet existed more than some 30 years; for Levchine (writing about 30 years earlier than Radloff) states that in his time agriculture was of little importance; and he does not make any mention of irrigation ²⁾. The introduction of the paddle-wheel has therefore probably to be ascribed to the Russians; for the Kazak Kirghiz, in Radloff's time, were already strongly influenced by them; so we may not speak here of a fact belonging to savage life. We have not found any other instance of this dependence of agriculture on capital; but even if there be a few instances, we are justified in concluding that, generally speaking, the savage agriculturist can perfectly well do without capital, except, of course, where he depends on cattle.

Moreover, subsistence is fairly easy to procure. Agriculture, where it is carried on in such simple manner as among most savages, does not require much skill or application. As compared with hunting, seafaring and manufactures, it is rather dull work, requiring patience rather than strength or skill. It is one of the occupations about which there is no excitement, and which in many primitive societies are performed by the women. Hunting requires personal qualities, and a good hunter is held in high esteem; but we have not found it stated in a single instance, that a man's influence or power depends on his ability in agriculture.

Subsistence, therefore, is independent of capital and easy to procure. Every one is able to clear a piece of ground and provide for himself; nobody offers his services to another, and so, if a man wants a labourer, he must compel another to work for him. „All freemen in new countries" says Bagehot „must be pretty equal; every one has labour, and every one

1) Radloff, *Aus Sibirien*, I pp 463—465.

2) Levchine, p 413

has land; capital, at least in agricultural countries (for pastoral countries are very different), is of little use, it cannot hire labour; the labourers go and work for themselves. There is a story often told of a great English capitalist who went out to Australia with a shipload of labourers and a carriage, his plan was that the labourers should build a house for him, and that he would keep his carriage, just as in England. But (so the story goes) he had to try to live in his carriage, for his labourers left him, and went away to work for themselves" ¹⁾). In such countries, if a man wants others to work for him, he must compel them to do it, i. e. he must enslave them. There are two ways in which we can avail ourselves of the produce of another's labour. We can buy from him what he has produced, or we can induce him to work in our service, so that whatever he produces will fall to us. Now we have seen that in primitive agricultural societies nobody voluntarily serves another, therefore, in such societies, he who wants the produce of another's labour must procure it either in the way of free commerce or by enslaving him. And the latter way will in many cases prove easier and more to the purpose. For primitive man is very lazy, therefore he will not do more than is necessary to provide for his own primary wants, if he is not compelled to work. Ingram remarks that „slavery discharged important offices — by forcing the captives, who with their descendants came to form the majority of the conquering community, to a life of industry in spite of the antipathy to regular and sustained labour which is deeply rooted in human nature, especially in the earlier stages of the social movement, when insouciance is so common a trait, and irresponsibility is hailed as a welcome relief" ²⁾).

1) Bagehot, pp. 72, 73

2) Ingram, p. 5. See also Ferrero's valuable remarks on the impulsiveness and indolence of savages and the *selezione del lavoro* brought about by slavery. A curious instance of this indolence is given by Steller who, speaking of the Italmen of Kamtschatka, says: „They never buy anything beforehand even if they can get it for a tenth of the ordinary price, but when a Kamtschadale is in need of something, he pays without haggling

And agriculture, requiring little skill and application, is very fit to be imposed upon slaves: compulsory agricultural labour, though not so productive as voluntary labour, can yet yield some profit. Moreover, the agricultural slave is rather easy to control; his work does not require independent action. It is also easy to prevent him from running away. In all this he differs from a hunting slave. And agriculture is also more favourable to the existence of slavery than cattle-breeding; for among pastoral tribes there is but a fixed and rather small amount of work to be done; but where men subsist by agriculture, any increase in the number of slaves brings about an increase of food.

We cannot, therefore, agree with Adam Smith, who asserts that in those countries where slaves are employed, it would be more profitable to employ free labourers, and that it was, in general, pride and love of power in the master that led to the employment of slaves ¹⁾. A free labourer, it is true, is more interested in the work he has to do, and therefore likely to do it better, than a slave; but in those countries where there is an abundance of fertile soil, and capital is of little use, free labourers cannot be had; every freeman prefers working for himself, or perhaps not working at all.

Cairnes admits that slave labour has sometimes an advantage over free labour, but only where tobacco, cotton and similar crops are raised for industrial purposes, not where cereals are

whatever is asked by the seller. And he never buys anything for ready money, but always on credit, for if he has no debts he will catch no animal, even though it came to his very door. In 1740 it came to pass, that a merchant heard a Kamtschadale complaining of two annoying sables, who every night came to the *balaguns* [store-houses] to steal fish, and had already caused much harm. The merchant smiled and asked: Why do you not catch them? Then they will not annoy you any longer. But the Kamtschadale replied: What shall I do with them? I have no debts to pay. The merchant gave him half a pound of tobacco and said: Take it, now you have a debt. Two hours after the Kamtschadale brought him the two sables he had caught, and paid off his debt." Steller, p. 291.

1) Adam Smith as referred to by Ingram, p. 282. Loria (p. 97) also holds that production was decreased by the introduction of slavery.

grown. „The economic advantages of slavery” he remarks „are easily stated: they are all comprised in the fact that the employer of slaves has absolute power over his workmen, and enjoys the disposal of the whole fruit of their labours. Slave labour, therefore, admits of the most complete organization; that is to say, it may be combined on an extensive scale, and directed by a controlling mind to a single end, and its cost can never rise above that which is necessary to maintain the slave in health and strength. On the other hand, the economical defects of slave labour are very serious. They may be summed up under the three following heads: — it is given reluctantly; it is unskilful; it is wanting in versatility . . . The line dividing the Slave from the Free States marks also an important division in the agricultural capabilities of North America. North of this line, the products for which the soil and climate are best adapted are cereal crops, while south of it the prevailing crops are tobacco, rice, cotton, and sugar; and these two classes of crops are broadly distinguished in the methods of culture suitable to each. The cultivation of the one class, of which cotton may be taken as the type, requires for its efficient conduct that labour should be combined and organized on an extensive scale. On the other hand, for the raising of cereal crops this condition is not so essential. Even where labour is abundant and that labour free, the large capitalist does not in this mode of farming appear on the whole to have any preponderating advantage over the small proprietor, who, with his family, cultivates his own farm, as the example of the best cultivated states in Europe proves. Whatever superiority he may have in the power of combining and directing labour seems to be compensated by the greater energy and spirit which the sense of property gives to the exertions of the small proprietor. But there is another essential circumstance in which these two classes of crops differ. A single labourer, Mr. Russell tells us, can cultivate twenty acres of wheat or Indian corn, while he cannot manage more than two of tobacco, or three of cotton. It appears from this that tobacco and cotton fulfil that condition which we saw

was essential to the economical employment of slaves — the possibility of working large numbers within a limited space; while wheat and Indian corn, in the cultivation of which the labourers are dispersed over a wide surface, fail in this respect. We thus find that cotton, and the class of crops of which cotton may be taken as the type, favour the employment of slaves in competition with peasant proprietors in two leading ways first, they need extensive combination and organization of labour — requirements which slavery is eminently calculated to supply, but in respect to which the labour of peasant proprietors is defective, and secondly, they allow of labour being concentrated, and thus minimize the cardinal evil of slave labour — the reluctance with which it is yielded. On the other hand, the cultivation of cereal crops, in which extensive combination of labour is not important, and in which the operations of industry are widely diffused, offers none of these advantages for the employment of slaves, while it is remarkably fitted to bring out in the highest degree the especial excellencies of the industry of free proprietors. Owing to these causes it has happened that slavery has been maintained in the Southern States¹⁾, which favour the growth of tobacco, cotton, and analogous products, while, in the Northern States, of which cereal crops are the great staple, it from an early period declined and has ultimately died out. And, in confirmation of this view, it may be added that whenever in the Southern States the external conditions are especially favourable to cereal crops, as in parts of Virginia, Kentucky, and Missouri, and along the slopes of the Alleghanies, there slavery has always failed to maintain itself. It is owing to this cause that there now exists in some parts of the South a considerable element of free labouring population”²⁾

This reasoning is quite correct so far as Negro slavery in the United States is concerned, but it does not hold with regard to primitive slavery or „retail slavery” as Bagehot

1) Cairnes wrote in 1862

2) Cairnes, pp 43, 44, 49 52

calls it. The few slaves kept in primitive agricultural societies work together with their masters, who can therefore continually supervise their labour and do not want overseers. Moreover, the slave in primitive and simple societies is not looked upon as a piece of machinery; he is, so to speak, an inferior member of the family, sharing in its pleasures, sorrows, and occupations; therefore it is not only the fear of punishment that induces him to work, he is interested in the welfare of the family, and knows that the better he works, the more he will be valued, and the more food there will be of which he will get his due share¹⁾. This retail slavery, as Bagehot remarks, „the slavery in which a master owns a few slaves, whom he well knows and daily sees — is not at all an intolerable state, the slaves of Abraham had no doubt a fair life, as things went in that day. But wholesale slavery, where men are but one of the investments of large capital, and where a great owner, so far from knowing each slave, can hardly tell how many gangs of them he works, is an abominable state”) Retail slavery, therefore, can very well exist where cereal crops are raised, it is even the most convenient system of labour in primitive agricultural societies.

We see that the general economic state of truly agricultural tribes may account for the existence of slavery among so many of these tribes. We shall now inquire what secondary causes there are at work among agricultural tribes, and what effect they have. But we shall have to speak first of a great factor in economic life, which we have not met with before.

§ 4. *Land and population.*

The general principle laid down in the last paragraph is

1) Such was the slave system of the ancient Germans described by Tacitus »You cannot tell master from slave by any distinction in education they spend then time among the same flocks, upon the same land until age separates the nobles and their valour causes them to be acknowledged' Tacitus, *Germania*, 20

2) Bagehot pp 73, 74, see also Flügel, p 96 and Jherings excellent description of the character of slavery in early Rome (Jhering, II Part I pp 172 sqq)

that in primitive agricultural societies capital is of little use and subsistence easy to acquire; therefore every able-bodied man can, by taking a piece of land into cultivation, provide for himself. Hence it follows that nobody voluntarily serves another; he who wants a labourer must subject him, and this subjection will often assume the character of slavery.

But this general rule requires an important qualification. Hitherto we have supposed, that there is much more fertile land than is required to be cultivated for the support of the actual population. Such, indeed, is the case among most savages; but it is not always so. And where it is not so, our general rule does not obtain. When all land fit for cultivation has been appropriated, a man, though able-bodied and willing to work, if he owns no land, cannot earn his subsistence independently of a landlord; he has to apply to the owners of the land for employment as a tenant or servant. In such case free labourers are available; therefore slaves are not wanted.

In this and the ensuing paragraphs we shall endeavour to prove by facts the hypothesis arrived at here by a deductive reasoning, which we may express thus: *where all land fit for cultivation has been appropriated, slavery is not likely to exist.*

The same view is held by some theoretical writers.

According to Cairnes „slavery, as a permanent system, has need not merely of a fertile soil, but of a practically unlimited extent of it. This arises from the defect of slave labour in point of versatility. As has been already remarked, the difficulty of teaching the slave anything is so great — the result of the compulsory ignorance in which he is kept, combined with want of intelligent interest in his work — that the only chance of rendering his labour profitable is, when he has once learned a lesson, to keep him to that lesson for life. Accordingly where agricultural operations are carried on by slaves, the business of each gang is always restricted to the raising of a single product. . . . Whatever crop may be best suited to the character of the soil and the nature of slave industry, whether cotton, tobacco, sugar, or rice, that crop is cultivated, and that alone. Rotation of crops is thus precluded by the con-

ditions of the case. The soil is tasked again and again to yield the same product, and the inevitable result follows. After a short series of years its fertility is completely exhausted, the planter — „land-killer” he is called in the picturesque nomenclature of the South — abandons the ground which he has rendered worthless, and passes on to seek in new soils for that fertility under which alone the agencies at his disposal can be profitably employed. . . . Slave cultivation, wherever it has been tried in the new world, has issued in the same results. Precluding the conditions of rotation of crops or skilful management, it tends inevitably to exhaust the land of a country, and consequently requires for its permanent success not merely a fertile soil but a practically unlimited extent of it.” Therefore expansion is a necessity of slave societies ¹⁾.

It is easy to see that these arguments do not apply to slavery as practised by savages. Rotation of crops and skilful management are wanting among most savage tribes, whether they keep slaves or not. Moreover, as we have already remarked, the slaves kept by them are not pieces of machinery, nor, as in the United States, kept in compulsory ignorance; they are rather regarded as members of the master’s family, there is no great difference between master and slave ²⁾. We may therefore suppose that, whether a savage tribe keeps slaves or not, agriculture is carried on in the same manner.

Loria also holds that slavery requires an abundant supply of ground; but his arguments are quite different from Cairnes’. His reasoning is as follows.

As long as there is land not yet appropriated, which a man destitute of capital can take into cultivation, capitalistic property cannot exist; for nobody is inclined to work for a capitalist, when he can work for his own profit on land that costs him nothing. If, then, the capitalist wants by any means to get a profit, he must violently suppress the free land to which the

¹⁾ Cairnes, pp 53—56, 62, 179 sqq

²⁾ Cairnes is also aware of the difference between ancient and modern slavery (pp 109 sqq) .

labourer owes his force and liberty. And as long as population is scarce and therefore all land cannot possibly be appropriated, the only means of suppressing the free land is by subjugating the labourer. This subjugation assumes at first the form of slavery; afterwards, when the decreasing fertility of the soil has to be made up for by a greater fertility of labour, slavery gives place to serfdom, which is milder and makes labour more productive.

When population increases, and all land that can be cultivated by labour without the aid of capital had been appropriated, quite another state of things prevails. The labourer has now no other resource but to sell his labour to the capitalist for such wages as the latter likes to give; he is compelled to yield to the capitalist the greater part of the produce of his labour. Now the latter need no longer use violence to get his profit; for it falls to him by the automatic operation of the social system. Yet even then the capitalistic *régime* is not absolutely certain to arise, for there is still land not yet appropriated, that can be cultivated with the aid of capital. If, therefore, the labourers could save a portion of their earnings and thus accumulate capital, they would be able to take this land into cultivation and so make themselves independent of their employers. This consideration induces the capitalist to keep wages so low that they cannot exceed the immediate wants of the labourers, which he brings about by various artificial means.

When, finally, a further increase of population makes the total appropriation of the land possible, the mere appropriation of it by the capitalist class renders the labourers for ever subjected. The capitalist need no longer have recourse to artificial methods of reducing wages; the system operates automatically. The capitalists have only to retain the ground for themselves: they will then secure a perpetual revenue at the cost of the labouring class.

„The basis of capitalistic property is thus always the same, viz. the suppression of the free land, the exclusion of the labourer from the appropriation of the land. This is brought about by various means, according to the fertility of the land

and the extent to which it has already been appropriated. As long as there is free land fit for cultivation by labour without the aid of capital, the only means of suppressing it are slavery and serfdom; afterwards, when the land not yet appropriated can only be cultivated by one who owns capital, it is sufficient systematically to reduce wages to a level that does not enable the labourers to save; when, finally, population has so far increased as to make the appropriation of all land possible, the capitalists have only to keep the land to themselves" ¹⁾).

Many objections can be made to Loria's arguments. He is constantly confusing capitalist and landlord. He seems to consider capitalists and labourers as two strictly separated classes, though we see continually people passing from one class to the other. And when he tells us that, if wages were higher, the labourers would save a portion of their earnings and so accumulate capital, but that the employers, wishing to prevent this, keep wages low, — he ascribes to both capitalists and labourers so much forethought and consciousness of class-interest as men scarcely ever have, except in books on political economy. Yet we cannot think but that in the main Loria is right. The gist of his reasoning is what we have already remarked in the beginning of this paragraph. As long as there is an abundance of land not yet appropriated, and therefore at the disposal of whoever may choose to cultivate it, nobody applies to another for employment, and the only labourers a man can procure are forced labourers. But when all land has been appropriated, those who own no land are at the mercy of the landholders, and voluntarily serve them; therefore slaves are not wanted.

Wakefield, in his book on the art of colonization, arrives at the same conclusion as Loria, and follows nearly the same line of argument.

This writer complains that in Australia and other colonies manufactures cannot thrive; the reason for this is, according to him, that there are no labourers to be had; for there is so

1) Loria, pp. 2—6

much free land that every newly-arrived labourer becomes a landowner rather than work for wages. Therefore there are many colonies which would keep slaves if the home government let them. This leads the writer to an investigation of the circumstances which induce men to keep slaves.

„They are not moral, but economical circumstances: they relate not to vice and virtue, but to production. They are the circumstances, in which one man finds it difficult or impossible to get other men to work under his direction for wages. They are the circumstances . . . which stand in the way of combination and constancy of labour, and which all civilized nations, in a certain stage of their advance from barbarism, have endeavoured to counteract, and have in some measure counteracted, by means of some kind of slavery. Hitherto in this world, labour has never been employed on any considerable scale, with constancy and in combination, except by one or other of two means; either by hiring, or by slavery of some kind. What the principle of association may do in the production of wealth, and for the labouring classes, without either slavery or hiring, remains to be seen, but at present we cannot rely upon it

Slavery is evidently a make-shift for hiring; a proceeding to which recourse is had, only when hiring is impossible or difficult . . . it is adopted because at the time and under the circumstances there is no other way of getting labourers to work with constancy and in combination. What, then, are the circumstances under which this happens?

It happens whenever population is scanty in proportion to land. Slavery . . . has been confined to countries of a scanty population, has never existed in very populous countries, and has gradually ceased in the countries whose population gradually increased to the point of density. And the reason is plain enough In populous countries, the desire to own land is not easily gratified, because the land is scarce and dear: the plentifulness and cheapness of land in thinly-peopled countries enables almost everybody who wishes it to become a landowner. In thinly-peopled countries, accordingly, the great majority

of free people are landowners who cultivate their own land; and labour for hire is necessarily scarce: in densely-peopled countries, on the contrary, the great majority of the people cannot obtain land, and there is plenty of labour for hire. Of plentifulness of labour for hire, the cause is dearness of land: cheapness of land is the cause of scarcity of labour for hire" ¹⁾).

Wakefield proposes that the government should sell the new land in the colonies at a sufficient price, i. e. at a price which would oblige the newly arrived labourers to serve a few years for wages before being able to become landowners ²⁾).

We shall speak of landlords and labourers. It is rather puzzling to speak, as Loria does, of capitalists. Capital, in the early stages of agriculture, is not yet an important factor in economic life, except where cattle are kept. Perhaps Loria uses the term „capitalist" in a popular sense as meaning a rich man. It may also be that he has kept in view somewhat exclusively the situation of colonial establishments, where the immigrants bring their capital along with them. However this may be, we must be aware that in the early communities we speak of capital is of little use. We shall, therefore, leave out of consideration Loria's intermediate stage, in which the land not yet appropriated can only be cultivated with the aid of capital.

There is one more reason (not mentioned by Loria) why slaves are of little use in those countries where all land has been appropriated. When there is free land, a man can, by increasing the number of his slaves, to any extent augment his revenue: every slave will take a new patch of land into cultivation; the more slaves a man owns, the more land he will have in tillage. But when the supply of land is limited,

1) Wakefield, pp. 323—325. Marx (I pp. 795—804) gives a detailed account of the same argument as developed in another book of Wakefield's, and adds that the exclusion of the mass of the people from the soil forms the basis of the capitalistic mode of production (ibid., p. 798).

2) On the practical result of Wakefield's plan see Cunningham, *English Industry*, II pp. 603—607. Prof. Cunningham justly calls Wakefield „a judicious and far-seeing man" (ibid., p. 605, note 3).

each landowner can employ only a definite number of labourers. As soon as there are hands enough to cultivate his grounds, an increase in the number of labourers becomes unprofitable. What we have said of pastoral tribes obtains here too: it may be that slaves are wanted, but when they are procured the point will soon be reached at which a further increase in their number yields no longer any profit. Therefore, when all land has been appropriated, even though it be equally divided between the members of the community and so a labouring class be wanting, there is little use for slaves.

It must be understood that we speak here of self-dependent agricultural countries. Where manufactures and the trade with foreign parts are highly developed, economic life becomes much more complicated and presents quite another character.

What we want to prove is that in such self-dependent agricultural countries, when all arable land has been appropriated, slavery is not likely to exist.

All land has been appropriated, when every piece of land is claimed by some one as his property. The owner, of course, need not be an individual; land may also be owned by a group of individuals. Yet the statements of our ethnographers concerning tribal property may not be accepted without much caution. They often tell us that a tribe claims the ownership of the territory it inhabits. This so-called right of property held by the tribe often proves to consist in this, that no strangers are admitted to the territory, but every member of the tribe may cultivate as much of the land as he likes. In such case, whether it be the tribe or the king to whom the land is stated to belong, the term „ownership” is very inappropriately used¹⁾. We shall only speak of appropriation of land when some one claims the use of it to the exclusion of all others, and values his property. Where the so-called owner is always willing to give a piece of it in cultivation to whoever wants to cultivate it, we shall not speak of appropriation; where, however, the land is never (except by way of favour) given in

1) See Dargun, pp 49 sqq

use *gratis*, but a rent is always stipulated, it appears that the owner values it, it has now really been appropriated.

It is not always clearly stated whether all land has been appropriated. Then we shall have recourse to some criteria from which we may infer whether such be the case.

The principal criterion is the existence of a class of freemen destitute of land ¹⁾. Where such people are found we may be sure that there is no free land; else they would take it into cultivation. It need scarcely be added that even where no such people are found, it may be that all land has been appropriated, everybody sharing in it.

The appropriation of the land does not imply that all land is actually being cultivated. There may be land actually out of tillage and yet valued by the owner. But when it is stated that all land is being cultivated, it must all have been appropriated. This will therefore be our second criterion.

There is another criterion that proves that all land has not yet been appropriated. When we are told that clearing a piece of land is a *modus acquirendi* of landed property, there must still be free land.

The appropriation of all land implies that property in land exists; but the reverse is not true: when we are informed that property in land exists, this does not prove that all land has already been appropriated. For as soon as population has so far increased as to require the cultivation of land less fertile than that which was at first exclusively cultivated, the more fertile land acquires value. „On the first settling of a country” says Ricardo „in which there is an abundance of rich and fertile land, a very small proportion of which is required to be cultivated for the support of the actual population, or indeed can be cultivated with the capital which the population

1) „Destitute of land” is not the same as „who own no land.” When population is so scarce that even the most fertile land has no value, nobody owns land, but there are no men destitute of land, any more than among us there are men destitute of air or water, every one has land at his disposal. Only when every piece of land has an owner, can there be people destitute of land, i. e. who have no land at their disposal.

can command, there will be no rent; for no one would pay for the use of land, when there was an abundant quantity not yet appropriated, and, therefore, at the disposal of whosoever might choose to cultivate it." But „when in the progress of society, land of the second degree of fertility is taken into cultivation, rent immediately commences on that of the first quality, and the amount of that rent will depend on the difference in the quality of these two portions of land" ¹⁾ As soon as land of the second degree of fertility is cultivated, rent commences; but in such cases there is possibly much land of the second degree not yet appropriated, and at any rate land of the 3rd, 4th, etc degrees. Accordingly we find that among some savage tribes, where there is an abundance of free land, some very fertile or very favourably situated pieces of land are highly valued. We shall give one instance. Among the Sea Dyaks land is so abundant that, if a Dyak, when about to cultivate a piece of land, finds a dead animal lying on it, which he considers a bad omen, he immediately leaves the land, and seeks a new field. Yet among the same Sea Dyaks „parents and children, brothers and sisters, very seldom quarrel; when they do so, it is from having married into a family with whom afterwards they may have disputes about land. One would imagine that was a subject not likely to create dissensions in a country like Borneo; but there are favourite farming-grounds, and boundaries are not very settled. It used to be the practice not to have recourse to arms on those occasions, but the two parties collecting their relatives and friends, would fight with sticks for the coveted spot" ²⁾. The last sentence proves that these quarrels were rather frequent. When, therefore, it is stated that land has value, or that lands are rented, or that the wealth of individuals consist partly in landed property, this does not prove that all land has already been appropriated.

We have spoken of all land fit for cultivation being ap-

1) Ricardo, pp 35, 36

2) Spenser St John, I pp 74, 60

propriated. What land is fit for cultivation in each country depends on the ability of the inhabitants in agriculture. Much will also depend on the character of the individuals. Where these are vigorous and enterprising, the people destitute of land will endure many hardships in taking new lands into cultivation, whereas weak and indolent men will prefer living at the expense of the rich and being employed by them in the most despised work. Here again we see that economic phenomena have always a psychological basis.

We shall not, in order to prove our hypothesis, examine the regulations of landed property among all agricultural savage tribes, but confine ourselves to one geographical group, in which the phenomena we have spoken of in this paragraph most strikingly present themselves. This group is Oceania, comprehending Polynesia, Micronesia, and Melanesia. We shall, however, leave out of regard New Guinea, one of the largest islands of the world. The rest of Oceania consists chiefly of small islands.

Slavery in Oceania (with the exception of New Guinea) has never prevailed to any great extent. In the second Chapter of Part I it has been shown that slavery existed only in Tahiti and New Zealand. And in these islands slaves were economically of but little use. Ellis says of the Tahitians: „We do not know that they ever carried on a traffic in slaves, or sold those whom they had conquered, though a chief might give a captive for a servant to a friend. This is the only kind of slavery that has ever obtained among them If peace continued, the captive frequently regained his liberty after a limited service with his master. So long, however, as they continued slaves or captives, their lives were in jeopardy. Sometimes they were suddenly murdered, to satiate the latent revenge of their conquerors, at others reserved as human victims, to be offered in sacrifice to their gods”¹⁾. And Polack states that in New Zealand formerly many slaves were killed

1) Ellis, Pol. Res., III pp. 95, 96

at the feasts held in commemoration of dead chiefs, but now (Polack wrote in 1840, when the Maori were already in continual intercourse with the English) no slaves are killed at these occasions, as they can be productively employed ¹⁾. This proves that they formerly were of little use. And Letourneau, who has consulted much literature on New Zealand, concludes: „After all, slavery in New Zealand was still defectively organized and without great importance; the slaves were captives preserved at least temporarily and performing the duties of servants in the households of the principal men. Indeed, a numerous servile class was not yet wanted, and sometimes the conquerors contented themselves with imposing upon subjugated tribes a nominal slavery, a kind of serfdom, by obliging them to pay a tribute and furnish food” ²⁾.

Slavery was thus unknown on most of the Oceanic islands, and where slaves were found they were economically of little use. We shall try to account for this fact by showing that on most of these islands all land had been appropriated, which led to a state of things inconsistent with slavery as a social system.

In the following paragraphs we shall inquire what our ethnographers have to say about landed property in Oceania and the extent to which land had been appropriated.

§ 5. *Land tenure in Polynesia.*

In this and the following two paragraphs we shall not mention all particulars of land tenure given by the ethnographers, but only those which may enable us to decide whether all land had been appropriated.

Mahler, speaking of *Polynesia and Micronesia* generally, remarks that on many islands the burial-places occupied large tracts of land; but this does not prove that there was abundance of land, for these places were hardly ever anything but

1) Polack, I pp 78, 79

2) Letourneau, p 17⁹

(according to Penny) „barren points where the wind howls and the sea moans, or rocky caverns in which the waves dash with sullen roar”¹⁾

Waltershausen tells us that in *Polynesia* the cultivated land belonged to the king and nobility, to the exclusion of the labouring classes. The upper classes also owned the fruit-trees, the small coral islets surrounding the larger islands, the lakes, the rivers, and those parts of the sea which extended from the land to the reefs. The untilled land was the property of the tribe and, unless the king forbade it, every one might cut the wood growing on it for building houses and canoes, but only the ruling classes might take it into cultivation²⁾

Mariner states that in *Tonga* property principally consists in plantations, canoes and houses. Agricultural labourers are very much despised, they serve the chiefs on whom they are dependent. West tells us that „the feudal principle, that the whole country belonged exclusively to the king, regulated the disposal and tenure of lands,” and so the lower classes were in a slavlike condition. „Lands were held in fief. The great landlords derived them by hereditary right, in conjunction with their chieftainship, but held them at the will of the supreme ruler.” These landlords distributed their lands among their families and followers³⁾.

„The land in *Samoa*” says Turner „is owned alike by the chiefs and these heads of families. The land belonging to each family is well known, and the person who, for the time being, holds the title of the family head, has the right to dispose of it. It is the same with the chiefs. There are certain tracts of bush or forest land which belong to them. The uncultivated bush is sometimes claimed by those who own the land on its borders. The lagoon also, as far as the reef, is considered the property of those off whose village it is situated.” Von Bulow concludes from the legends and traditions of the Samoans that

1) Mahler, pp 58, 59

2) Waltershausen, pp 17, 18

3) Mariner, II pp 162, 160, West, p 262

formerly all the land belonged to the chiefs. But now the land is owned by the families ¹⁾).

Gardiner gives a beautiful and elaborate account of the regulation of landed property in *Rotuma*: „No private property in land formerly existed, it was all vested in the *pure* for the time being of the *hoag* ²⁾; the district generally had rights over it. It usually consisted of four kinds: bush, swamp, coast, and proprietary water in the boat channel; common to the *hoag*, too, were wells and graveyards. Every member of the *hoag* knew its boundaries, which consisted of lines between certain trees or prominent rocks, posts, and even stone walls. In the bush land every *hoag* possessed property; it lay on the slopes of hills and in valleys between at some slight distance from the coast, from which it was separated by a stone wall, running round the whole island. On it taro, yams, bananas, plantains, and a few cocoanut trees were grown for food, while the paths into it and through it were planted with the Tahitian chestnut, the fava tree, and the sagopaln. The Tahitian chestnut and fava trees were favourite boundary marks owing to their size and longevity. Swamp land is only possessed by Noatau, Oinafia, Matusa, and Itomotu. It is low-lying land, on extensive beach sand flats, which exist in these districts. The tide always keeps it wet, percolating through the sand, and in it is grown the *papoi*, or *broka*, against famine. The possession of a good-sized strip always caused and gave to the *hoag* a position of importance; its boundaries were stones at the sides. Coast land lay outside the surrounding wall, to which the *hoag* had a strip from and including the foreshore. On it as near as possible to the coast the house or houses of the *hoag* were placed, while the rest of the land was planted with cocoanuts for drinking purposes. Hifo trees are stated to have been planted formerly to show the boundaries, but they more often now consist of stones or cocoanut trees, the ownership of which is a constant source of dispute. Districts and even villages were sharply

1) Turner, Samoa, pp 176 177, Von Bulow, p 192.

2) *Hoag* is a large family-group of which the *pure* is the head.

marked off by walls down to the beach. All had the right of turning out their pigs on this land, and each *hoag* had to keep in proper repair the parts of the wall adjacent to it. Each had, however, usually an enclosure on its own land for its own pigs, when young. The proprietary water ran from the foreshore to the reef, a continuation of the strip on shore. At Noatau and Matusa, where it is very broad, it was to some extent cross-divided. It consists of a sand flat covered by 10—12 feet of water at high-tide. On it fish of all sorts are caught by traps and various devices, and shell-fish are gathered. As these form no inconsiderable portion of the daily food, indeed the principal animal food, the value of this property was always very considerable. The reef — i. e. the part on the outside exposed at the low tide — was the common property of all. It was explained to me that fish, crabs, etc., cannot be cultivated there, owing to the heavy breaking seas, but are sent up by the *atua*, or spirits.” „Any land, not being planted, is willingly lent to another *hoag* on condition of two baskets of first-fruits of each patch being brought to the *pua*, but cocoanut trees on the land cannot be touched by the tenant, nor is he entitled to their usufruct. If a *hoag* owns land in one district, but lives in another, first-fruits are always paid to the chief of the district, in which its lands lie. Any encroachment on the land was very vigorously resented, it was usually referred to the district chief to settle, and his decision loyally adhered to.” „If he [a man] had planted more cocoanuts than required by the *hoag*, he has the entire usufruct of these trees during his lifetime, quite independently of the apportionment of the land below them for planting.” We see that the idea of landownership is most fully developed here. During the present century the population has much diminished, and so „most of the *hoag* have far more land than they can cultivate.” But formerly it was otherwise „Examining the remains of planting, it appears as if the whole island, wherever practicable, was at one time tilled. The land, where there is a good and deep soil, is, and was, no doubt tilled regularly from year to year, while the rocky country was planted more or less in rotation with yams

and kava. Even on the steepest slopes, there are signs of clearing, the summit alone being left crowned by the hifo. The bottoms of the craters of many hills used to be planted too, in the crater of Sol Satarua, the *lulu* as it is termed, there are still bananas growing, but planted so long ago that the fact that it had a *lulu* at all was almost forgotten" ¹⁾ According to Hale food was not always abundant on this island, therefore the natives liked to engage themselves as sailors on whaling-ships, until they had earned enough to buy a piece of land ²⁾. In Hale's time land was evidently not so abundant as it is now that the population is so rapidly declining

In *Tahiti* „every portion of land had its respective owner, and even the distinct trees on the land had sometimes different proprietors, and a tree, and the land on which it grew, different owners." What our informant further tells us of the present state of things as compared with that of earlier times, shows a remarkable likeness to Gardiner's statement about Rotuma. Ellis states that „an extent of soil capable of cultivation, and other resources, are adequate to the maintenance of a population tenfold increased above its present numbers" But a great depopulation has taken place in the course of years. „In the bottom of every valley, even to the recesses in the mountains, on the sides of the inferior hills, and on the brows of almost every promontory, in each of the islands, monuments of former generations are still met with in great abundance. Stone pavements of their dwellings and court-yards, foundations of houses, and remains of family temples, are numerous. Occasionally they are found in exposed situations, but generally amidst thickets of brushwood or groves of trees, some of which are of the largest growth All these relics are of the same kind as those observed among the natives at the time of their discovery evidently proving that they belong to the same race, though to a more populous era of their history. The stone tools occasionally found near these vestiges of

1) Gardiner, pp 483—485, 497

2) Hale, p 105

antiquity demonstrate the same lamentable fact." According to Moerenhout „landed properties constituted the principal, or rather the only wealth of these people, therefore the power of the chiefs always depended on the quantity and quality of their lands; moreover, the more people they could support, the more sure they were of having subjects." This writer does not, however, enter into many details ¹⁾.

In *Hawaii* four social ranks existed. The members of the third rank, according to Ellis, „are generally called *haku ama*, proprietors of the land." „In the fourth rank may be included the small farmers, who rent from ten to twenty or thirty acres of land; the mechanics, . . . indeed all the labouring classes, those who attach themselves to some chief or farmer, and labour on his land for their food and clothing, as well as those who cultivate small portions of land for their own advantage." „Sometimes the poor people take a piece of land, on condition of cultivating a given portion for the chief, and the remainder for themselves, making a fresh agreement after every crop." Hale states that formerly there were no landed proprietors; all the land was „the property of the king, and leased by him to inferior chiefs (*haku-ama*, landlords), who underlet it to the people; as the king, however, though absolute in theory, was aware that his power depended very much on the co-operation of the high chiefs, they became, to a certain degree, partakers in his authority." Remy tells us that the land belonged exclusively to the great chiefs, who leased it and received considerable rents ²⁾.

In *Rarotonga*, according to Gerland, a man's power depends on the quantity of land he owns. Meinicke states that there are four social classes. The third class is composed of the landed proprietors; the lowest class are those who own no land and live as tenants on the estates of the nobles ³⁾.

1) Ellis, Pol Res., III p 416, I pp 409, 403, Moerenhout, II p 42

2) Ellis, Pol Res., IV pp 442, 443, 446, Hale, p 36, Remy, p XLVI

• 3) Watz Gerland, VI p 499, Meinicke, Die Inseln des stillen Oceans, II p. 148.

On the *Marquesas Islands*, according to Gerland, three ranks formerly existed: chiefs, landholders, and the common people. The landholders were the most powerful class; the common people were obliged to pay them a tribute. Yet those who owned most land were not always most respected, and even of the common people some owned land. Meinicke, however, states that the whole of the land is the property of the nobles. Hale, after speaking of the nobles, adds that the rest of the people were the landholders and their relatives and tenants ¹⁾).

In *Mangarewa* (belonging to the Paumotu group) the nobles were the proprietors of the soil; they often let out their lands to the third class, the common people ²⁾).

Meinicke tells us that in the *Manahiki* group the cocoanut trees and the lagoons (for fishing purposes) were private property ³⁾).

Tregear has the following notes on landed property in *New Zealand*: „Land was held primarily by tribal right; but within this tribal right each free warrior of the tribe had particular rights over some portion. He could not part with the land because it was not his to give or sell, but he had better rights to certain portions than others of his tribe. He would claim by having the bones of his father or grandfather there, or that they once rested there; or by the fact of his navel-string having been cut there; or by his blood having been shed on it; or by having been cursed there; or by having helped in the war party which took the land; or by his wife being owner by descent; or by having been invited by the owners to live there.” Thomson states that „all free persons, male and female, constituting the nation were proprietors of the soil.” The chiefs were the greatest landholders. „Conquest and occupation gave titles to land. The right of fishing in rivers and sea belonged to the adjoining landed proprietor. Amongst the families of

2) Waitz-Gerland, VI p. 219.

3) Meinicke, I c., p. 264.

each tribe there are also laws regarding landed property. Thus the cultivation of a portion of forest land renders it the property of those who cleared it, and this right descended from generation to generation It was illegal for one family to plant in another's clearing without permission" ¹⁾).

We see that on most Polynesian islands all land has, or had been appropriated. Regarding Rotuma and Tahiti this is explicitly stated; and the same must be the case in Tonga, Hawaii, Rarotonga, the Marquesas Islands, and Mangarewa, where classes destitute of land are found. In Manahiki property in land was strongly developed; but whether there was still free land is not clear. In Samoa there was still unappropriated bush land, though this was already „sometimes claimed by those who own the land on its borders." In New Zealand clearing was still a *modus acquirendi*, which proves that all land had not yet been appropriated.

§ 6. *Land tenure in Micronesia.*

Kubary tells us that the population of *Ebon*, and of the whole Ralik group (in the Marshall Islands), consists of four ranks „The common people are called *army kapur* and form the greater part of the subjects. They have no property, except the land allotted to them by the chief, who can take it from them at his pleasure. Every week they have, each of them, to provide the chief with prepared food, the quantity and quality of which are determined. The next class are the *lola-katak*, who hold their property by hereditary right and not from the chief. The chief cannot take the property of these men unless he kills them first." „The punishments inflicted by the chiefs in former times consisted most often in capital punishment, and more rarely, in less serious cases, in confiscation of land and house" ²⁾).

¹⁾ Tregear, p. 106, Thomson, New Zealand, I pp. 96, 97

²⁾ Kubary, Die Ebongruppe, pp. 36, 37.

Kohler, referring to a manuscript of Jung, states that in *Nauru* (also belonging to the Marshall group) the soil is common property or individual property. Not only the mainland, but the reefs near the coast and the sea washing them, can be individual property. Such property may be alienated, which most often is done by exchanging small parcels. On the common ground every one may cut up a palm to make toddy from and so acquire an exclusive right" ¹⁾). Here too we find a lowest class destitute of land ²⁾).

On the *Pelau Islands* the right of disposing of the land of the tribe vests in the *obokúl* (chief of a family-group); but he cannot alienate any land without the consent of his nephews. However, a regular agriculture does not exist, and most of the land remains untilld; therefore the opposition of the nephews generally bears a formal character; they only aim at extorting a present from the *obokul*. The *obokúl* divides the land among the members of the tribe for cultivation. He may also cede pieces of land to aliens for use without payment; such persons then enter into the position of *kaukáth*, i. e. they are considered as related to the tribe without possessing the same rights, they occasionally provide the *obokúl* with food, and help him in his labours. In another place our informant states that there is not often reason for disputes about land, as the population is scarce and large tracts of land are uncultivated ³⁾

On the *Mortlock Islands* the chief of each tribe has an unlimited right to dispose of the land belonging to the tribe. He divides it among the heads of families on condition of their paying a tribute in kind. The latter assign to each member of their groups a piece of land for cultivation. Most land is divided up between the several *keys* (family-groups); the land which is not yet occupied is the property of the principal *key* and thus more directly than the rest at the disposal of the chief ⁴⁾.

1) Kohler, Das Recht der Marshall-Insulaner, p. 451.

2) See above, p. 104

3) Kubary, Soc. Einr. der Pelauer, pp. 47, 48; Kubary, Die Verbrechen, p. 85

4) Kubary, Mortlock-Inseln, p. 253

On the isle of *Kusaie* twelve principal chiefs own all the land; but the chiefs of the second rank administer and cultivate it for them. The common people are obliged to pay a tribute to the chiefs and serve them. The highest mountains are planted up to their summits with bananas, taro, sugar-cane, etc. ¹⁾).

On the *Eastern Caroline Islands* the land belongs exclusively to the two upper classes of people; the third class are attached to the soil on which they live ²⁾).

Hale states that in *Ponape* or *Ascension Island* there are three classes. All the land belongs to the two upper classes. The estates are never alienated and pass only by succession ³⁾).

Gerland tells us that on the *Marianne Islands* the nobles were hereditary owners of the whole of the land ⁴⁾).

As to the *Kingsmill Islands*, the particulars given by Wilkes and Parkinson, as quoted in the second Chapter of Part I.), sufficiently prove that all land had been appropriated. According to Wilkes „any one who owns land can always call upon others to provide him with a house, canoe, and the necessaries of life; but one who has none is considered as a slave, and can hold no property whatever” Hale tells us that „the *latola* are persons not originally of noble birth, who either by the favour of their chief or by good fortune in war, have acquired land and with it freedom” ⁵⁾). If in Wilkes' statement we read „proletarian” instead of „slave,” and take Hale's „freedom” in an economic, not in a legal sense, we see that here too the lowest class were destitute of landed property.

Lower classes destitute of land are stated to exist in Ebon, *Kusaie*, the *Eastern Caroline Islands* generally, *Ponape*, the *Marianne Islands*, and the *Kingsmill Islands*, so on all these

3) Hale, p 83

4) Waitz-Gerland, I c, p 114

5) See above, pp 106—108

6) Wilkes, p. 96, Hale, p 102

islands all land must have been appropriated. The same must be the case in Nauru, where a class destitute of land also exists. Our informant speaks of common grounds on which palms grow; but as he makes no mention of any cultivation undertaken on these grounds, we may suppose that they are not fit for cultivation. In Pelau, though a vast amount of land is actually out of tillage, the regulation of landed property related by Kubary proves that all land is held as property. Here, in Rotuma and Tahiti, we have to deal with the effects of the depopulation that has taken place in Oceania. In Mortlock there seems to be free land; but Kubary's account is not very clear.

§ 7. *Land tenure in Melanesia.*

Codrington, in his article „On social regulations in Melanesia,” remarks that his observations „are limited to the *Northern New Hebrides*, the *Banks Islands*, the *Santa Cruz Group*, and the *South-eastern Solomon Islands*”¹⁾. Of land tenure he says: „Land is everywhere divided into (1) the Town, (2) the Gardens, (3) the Bush. Of these the two first are held as property, the third is unappropriated Everywhere, or almost everywhere, the abundance of land makes it of little value. If an individual reclaims for himself a piece of bush land, it becomes his own”²⁾.

Somerville, speaking of *New Georgia* (one of the central Solomon Islands, and therefore not included in Codrington's description) remarks: „Property seems to be well recognised: every one of the myriad islets of the great eastern lagoon has its understood owner, no matter if cocoanuts be growing there or not. Groves of cocoanut trees are well protected by *hopes*, as before described, as are also taro patches. Hunting rights over opossums on a man's property are also protected by *hopes*”³⁾.

1) Codrington, Soc Reg p 306

2) Ibid, pp 311, 312

3) Somerville, New Georgia, p 404

Woodford describes the regulation of landed property in the *Solomon Islands* in the following terms: „As to the system of land tenure among them, I believe that to land, *per se*, they attach but little value. Any individual of the tribe appears to be able to select at will a piece of land from the forest, which he clears, fences in, and upon it rears his crop of yams or bananas. After the crops are taken off, the land is allowed to relapse again to forest. When, however, a native plants cocoanuts his property appears to be in the trees themselves, apart altogether from any idea of ownership in the land upon which they are planted I do not think that any objection would be raised to another native utilizing the ground upon which the cocoanuts were planted for other crops so long as the trees themselves were in no way damaged or interfered with. Property in cocoanuts appears to pass, upon a man's death, to his heirs" ¹⁾).

Of land tenure on the isle of *Anertium*, in the New Hebrides, Inglis says: „There is neither a town nor a village in the whole island. The system of cottage farming is a state of full development there. There is no large proprietor, no powerful or wealthy chief; every man sits proprietor of his own cottage, his own garden, and his own cultivated patches you could not call them fields. The waste lands and the forests, to the summits of the mountains, belong to the tribe. They are a kind of crown lands, but what each man cultivates belongs to himself" ²⁾).

In *New Caledonia*, according to Blainne, a noble's authority depends on the range of cultivated grounds he owns, and one who possesses large tracts of cultivated land and large plantations of cocoanut trees is called a great chief. Glaumont tells us that „property is acquired by purchase or exchange. It may also be acquired by labour. Thus uncultivated grounds belong to the tribe, are so to speak common property; but if a Kanaka clears and cultivates a portion of this bush land

1) Woodford, pp. 32, 33

2) Inglis, p. 24.

it passes into his property. Property is held sacred (viz. in time of peace); the chief himself, however powerful, would not dare to take away the field of taros or ignames from the least of his subjects." Meinicke says: „Each tribe possesses a separate territory in which the land fit for cultivation is the individual property of the chiefs and nobles, whereas the rest is at the disposal of all." According to Rochas there are two ranks: nobles and common people; but the latter enjoy a rather independent position and always own some land. The rights of property in land are highly respected, even by the chiefs" ¹⁾).

Williams, describing *Fiji*, speaks of a feudal government; but he adds that the ancient divisions of landed property are much respected. Seeman states that the „real power of the state resides in the landholders or gentry"; and Hale tells us that the members of the lowest class „work for the chiefs and landholders and are supported by them." The fullest account of land tenure in Fiji is given by Fison. The lands are of three kinds. „1. The *Yavu* or Town-lot; 2. The *Qele*, or Arable Land; and 3. the *Veikanu*, or Forest." „The town-lots and the arable lands are divided among the *tauken* (land-owners), while the forest lands are held in common by them. Arable land also, which is not in actual use, is in some places common to a certain extent." „The land is vested in or, at any rate, is held by — certain joint tribal owners who have a common descent. These are called the *Taukeni vanua*, or owners of the land Not all the people are landowners." Fison then speaks of some classes destitute of land, of whom it is not quite clear whether they are tenants or serfs. But the following statement of his clearly shows that all land has been appropriated: „In addition to the *koro* [villages] already mentioned, there are others inhabited by tribes who have either migrated from their own lands owing to disagreement with their kinsfolk, or have been driven thence by war. These

1) Brainne, p. 241, Glaumont, p. 75, Meinicke, *Die Inseln des stillen Oceans*, I p. 230, Rochas, pp. 245, 262

emigrants beg land from a *taupei* tribe, and settle down upon it. They are not landowners where they are now living, but it does not follow that they are *kaisi* [base-born man, who are very much despised] If they were *taupei* in their own land they cannot be placed on the level of the people without a father." They pay „rent of produce and service Tribes such as these are tenants at will, and the land may be taken from them whenever it may be required. How long soever their occupation may continue, it does not establish a title. The descendants of the *taupei* can always resume the lands, upon giving formal notice, and presenting some property or other, which is called „the falling back of the soil" ¹⁾. These emigrants are neither slaves nor serfs, but destitute of land; if there were free land fit for cultivation, they would appropriate it instead of becoming tenants at will

Parkinson, describing *New Britain* (Neu Pommern) makes no mention of property in land. A man's position does not depend upon the possession of land, but of *dewarra* or shell-money. Among the articles which are bought with this money our informant does not name land ²⁾. Hence we may infer that land has little value here.

Haddon, in his article on the *Western Tribes of Torres Straits*, remarks: „I have no precise information as to land laws, but I believe that the whole of the land is divided up into properties, certainly the arable land is, the chief sharing like anyone else. There is no one person or class of landowners who possess land to the total exclusion of anyone else. Title to land is derived from inheritance, gift or purchase. I never heard of any means of conveyance" ³⁾.

Hunt, describing the *Murray Islands*, says: „The chiefs held only their own hereditary lands, but the first fruits of all cultivated lands were presented to them as their share

1) Williams, pp 18, 22, Seeman, p 233, Hale, p 50; Fison, *Land tenure in Fiji*, pp 336, 338, 343

2) Parkinson, *Im Bismarck-Archipel*, p 104, see also p 101.

3) Haddon, p 334 .

Any dispute about land would be settled by the old men who would meet and discuss the point in dispute and then pronounce their decision. Land was never sold, but could be leased, when, if used for planting, a share in the first fruits would be paid to the owner"¹⁾.

In many parts of Melanesia clearing is a *modus acquirendi*, viz. in the Solomon Islands, Northern New Hebrides, Banks Islands, Santa Cruz Group, and New Caledonia. Yet the rights of landowners are recognized everywhere in these islands. Here, as Ricardo would say, land of the second degree of fertility has already been taken into cultivation, and so rent has commenced on that of the first; but there is still free land. In Aneityum, too, there seems to be land not yet appropriated. In Fiji people destitute of land are found. In New Britain land seems to have little value. Among the western tribes of Torres Straits all arable land is divided up into properties, as Haddon tells us; but whether the rest of the land is still free is not quite clear. With regard to the Murray Islands we cannot arrive at any definite conclusion.

Generally speaking we may conclude that in Polynesia and Micronesia all land has been appropriated, whereas in the Melanesian islands free land still exists.

We see further that not only the arable land is held as property, but often also the fruit-trees, lakes and streams, the shore and the lagoon as far as the reef. On most Polynesian and Micronesian islands whatever portion of land or water can yield any profit has been appropriated.

§ 8. *Landlords, tenants and labourers in Oceania.*

It appears from the foregoing paragraphs that in those islands where all land has been appropriated, there are nearly always found people destitute of land. The only exceptions are

1) Hunt, p 7

Rotuma and Pelau. Gardiner, in his very minute article on Rotuma, makes no mention of social ranks; and Kubary, as we have already seen in the second Chapter of Part I, states that „among the Pelau islanders there can be no question of a division of the people in ranks or classes.” But Semper, as has also been shown in the same Chapter, speaks of a despised working class ¹⁾.

Another state of things would not be inconceivable. It were quite possible that every inhabitant had appropriated a portion of the land, nothing of it remaining unclaimed. Yet it is easy to understand that, when all land has become individual property, a class of people destitute of land is likely soon to arise. In large families the portions falling to each of the children will often become too small to live upon. And where it is customary to buy and sell land, there may be improvident people who squander the land that was to afford them subsistence. But the principal cause probably is the arbitrary conduct of the chiefs and other men of power who appropriate the land of their enemies, and even, under some pretext, that belonging to their own subjects.

In *Tahiti* the chiefs had „a desire for war, as a means of enlarging their territory, and augmenting their power” ²⁾.

Regarding *Hawaii* Ellis tells us: „When Tamehameha had subdued the greater part of the islands, he distributed them among his favourite chiefs and warriors, on condition of their rendering him, not only military service, but a certain proportion of the produce of their lands. This also appears to have been their ancient practice on similar occasions, as the *hoopahora* or *papahora*, division of land among the *vanakira* or victors, invariably followed the conquest of a district or island” ³⁾.

In the *Kingsmill Islands* the *katoka* are persons who „either

1) See above, p. 106. In Tahiti there were also people destitute of land, of whom we shall have to speak in this paragraph.

2) Ellis, *Pol. Res.*, I p. 407.

3) *Ibid.*, IV p. 414.

by the favour of their chief or by good fortune in war, have acquired land" ¹⁾. Hence it appears that, here too, the victors used to occupy the lands of the conquered.

In *Fiji*, according to Waterhouse, one of the motives of war was the desire for land; and Williams states that the inhabitants of conquered districts were reduced to an abject servitude. Fison says: „It is certain that in former days, when population seems to have been on the increase . . . tribes were dispossessed of their lands by other tribes who took them into their occupation, and are the *taukei* of the present day" ²⁾.

We have seen in § 5 that a *New Zealander* sometimes claimed land „by having helped in the war party which took the land." According to Ellis a desire to enlarge their territory led to frequent wars. Thomson tells us: „Sometimes whole tribes became nominally slaves, although permitted to live at their usual places of residence, on the condition of catching eels and preparing food for their conquerors at certain seasons" ³⁾.

In *New Caledonia* the inhabitants of conquered districts have to pay a tribute to the conqueror, but generally continue living under their own chiefs ⁴⁾.

Von Bulow states that in *Samoa* conquered lands become the private property of the victorious chief ⁵⁾.

We see that this conquering of land does not always create a class destitute of land; sometimes the inhabitants have only to pay a tribute. But where individuals belonging to the victorious tribe receive portions of the conquered land allotted to them, as in New Zealand and the Kingsmill Islands, or where, as in Samoa, the land becomes the private property of the conquering chief, the original owners must be deprived of their property.

2) Waterhouse, p 346, Williams, p 54, Fison, Land tenure in Fiji, p 343

3) Ellis, Pol Res, III p 360, Thomson, New Zealand, p 148

4) Rochas, p 243

5) Von Bulow, p 193.

It also occurs that within the tribe the land is taken away from its owner.

Williams states that in *Fiji* an adulterer may be deprived of his land as a punishment; and Fison tells us that the chiefs have overridden the ancient customs regarding land tenure ¹⁾.

In *Tahiti* those who resisted the king's authority were banished and deprived of their lands. „Should the offender have been guilty of disobedience to the just demands of the king, though the lands might be his hereditary property, he must leave them, and become, as the people expressed it, a wanderer „upon the road” ” ²⁾).

In *Ebon* confiscation of land by the chief was formerly a mode of punishment ³⁾

Among the *Melanesians* described by Codrington the chiefs „often use their power to drive away the owners of gardens they desire to occupy”).

Where land is so highly valued, and wealth and power depend upon the possession of it, the chiefs and other men of power will be inclined to appropriate as much of it as possible. This is not always easy, and sometimes, in democratically organized societies, hardly practicable; but we may be sure that it will be done on the very first opportunity. This is strikingly proved by what Gardiner tells us of *Rotuma*: „Since the introduction of missionaries, too, much land has been seized by the chiefs, who, as a rule, in each district were its missionaries, as fines for the fornications of individuals. A certain amount of cocoanut oil was then given by the chiefs to the Wesleyan Mission, apparently in payment for their support. The mission in the name of which it was done, though generally without the knowledge of the white teachers, was so powerful that the *hoag* had no redress.” Formerly landed property in *Rotuma* was highly respected: „The victorious

1) Williams, p. 29 Fison, l. c., p. 345

2) Ellis, *Pol. Res.*, III p. 122

3) See above, p. 323

4) Codrington, *Soc. Reg.*, p. 311

side obtained no territorial aggrandisement, as it was to the the common interest of all to maintain the integrity of the land, and the victors might on some future occasion be themselves in the position of the vanquished" ¹⁾). Formerly the chiefs were not powerful enough to appropriate land belonging to others; but the additional power that the new religion gave them enabled them to seize the lands of their subjects, and they immediately availed themselves of this opportunity.

A similar change has taken place in *Samoa*. In Turner's time Samoan government had „more of the patriarchal and democratic in it, than of the monarchical." Von Bulow, writing several years later than Turner, states that some chiefs have lately introduced what he calls serfdom. In the villages where this state of things exists the inhabitants live on land belonging to the chief. They pay no rent, but are obliged to stand by the chief in war and peace. They are personally free and have the right to emigrate, but own no land ²⁾.

We can now perfectly understand why people destitute of land are found in so many of these islands. And as most often not only the arable land, but fruit-trees, lakes, streams, and the sea adjoining the land are individual property, these people are entirely at the mercy of the landowners. We shall see that they have to perform the drudgery for the landlords, and are sometimes heavily oppressed.

In *Tonga* the lowest class were the *toos*. „The *toos* can be divided into three categories. A few of them are warriors and form part of the retinue of the chiefs, as we have said; some are professed cooks in the service of the superior or inferior chiefs; others, and these form the majority, till the soil. The latter are found throughout the country and have no other employment besides agriculture" ³⁾.

In *Samoa*, in Turner's time, a democratic and even communistic régime prevailed. Speaking of the chief, Turner says:

1) Gardiner, pp 485, 470

2) Turner, *Samoa*, p 173, Von Bulow, p. 194

3) Mariner, II p 370

„With a few exceptions, he moves about, and shares in everyday employments, just like a common man. He goes out with the fishing party, works in his plantations, helps at house-building, and lends a hand at the native oven.” The Samoans were very hospitable: „In addition to their own individual wants, their hospitable custom in supplying, without money and without stint, the wants of visitors from all parts of the group, was a great drain on their plantations.” Hale states that „the common people are in general the relatives and dependents of the *tulafales* [landlords] and have no direct influence in the government”¹⁾. We have seen that recently a class of people destitute of land has been created by some chiefs; but their lot does not seem to be a hard one.

Gardiner, in his description of *Rotuma*, makes no mention of social classes.

In *Tahiti* the lowest class were the *manahune*, including, besides the *titi* or slaves, „the *teuteu* or servants of the chiefs; all who were destitute of any land, and ignorant of the rude arts of carpentering, building, etc., which are respected among them, and such as were reduced to a state of dependence upon those in higher stations” Speaking of the great landholders our informant says: „Possessing at all times the most ample stores of native provisions, the number of their dependents, or retainers, was great. The destitute and thoughtless readily attached themselves to their establishments, for the purpose of securing the means of subsistence without care or apprehension of want”²⁾.

In *Hawaii* four social ranks existed. The members of the third rank held land, „cultivating it either by their own dependents and domestics, or letting it out in small allotments to tenants . . . In the fourth rank may be included the small farmers, who rent from ten to twenty or thirty acres of land; the mechanics, namely, canoe and house builders, fishermen, musicians, and dancers; indeed, all the labouring classes, those who attach

* 1) Turner, Samoa, pp. 175, 171, Hale, p. 28

2) Ellis, Pol. Res., III, pp. 96—98.

themselves to some chief or farmer, and labour on his land for their food and clothing, as well as those who cultivate small portions of land for their own advantage". „Sometimes the poor people take a piece of land, on condition of cultivating a given portion for the chief, and the remainder for themselves, making a fresh agreement after every crop. In addition to the above demands, the common people are in general obliged to labour, if required, part of two days out of seven, in cultivating farms, building houses, etc for their landlord. A time is usually appointed for receiving the rent, when the people repair to the governor's with what they have to pay. If the required amount is furnished, they return, and, as they express it (*komo hou*) enter again on their land. But if unable to pay the required sum, and their landlords are dissatisfied with the presents they have received, or think the tenants have neglected their farm, they are forbidden to return, and the land is offered to another. When, however, the produce brought is nearly equal to the required rent, and the chiefs think the occupants have exerted themselves to procure it, they remit the deficiency, and allow them to return" ¹⁾). This is quite the reverse of what occurs in slave countries. The slave or serf is prevented from escaping and compelled to remain with his master; the Hawaiian tenant, if the landlord is dissatisfied with the produce brought, is forbidden to return to the land of his employer.

In *Rarotonga* the lowest class are the *unga* or servants who have to cultivate the lands of the nobles, build their houses and canoes, make nets for them, pay them tributes, and in general obey all their demands ²⁾).

In the *Marquesas Islands*, though the different grades in society were not so distinctly marked as in Tahiti, there was a lowest class, who had to pay tributes to the chiefs and might be deprived by them of whatever they owned ³⁾).

1) Ibid., IV pp 413, 416, 417,

2) Waitz-Gerland, VI p 199

3) Ibid., pp. 214, 216

In *Mangarewa*, as we have seen, the whole of the land belonged to the nobility, who often leased their lands to the third class, the common people ¹⁾).

In *New Zealand*, as has been shown in § 5, every free-man owned land. Accordingly we find no mention made of a class of poor or subjected freemen.

Gerland states that the two principal classes, nobles and common people, were nowhere in Polynesia less strictly separated than in Samoa and New Zealand. This strikingly shows that the appropriation of the land was really the basis of Polynesian aristocracy; for Samoa and New Zealand, as we have seen, were the only Polynesian groups in which there was still free land ²⁾).

Regarding the condition of the common people in Micronesia we have already mentioned many particulars in § 7 of the second Chapter of Part I in inquiring whether they were to be regarded as slaves, and in § 6 of this Chapter in order to prove that all land had been appropriated. We shall briefly repeat here what bears on their condition and the work imposed upon them, adding such details as have not yet been mentioned.

In *Nauru* the lowest class (wrongly called slaves by Kohler) have no landed property. They till the lands of their lords, and deliver to them the fruits, receiving only their livelihood. The landlord had formerly a *ius vitae ac necis* over his labourers.

In *Ebon* the common people live on land allotted to them by the chief who can take it from them at his pleasure. Every week they have, each of them, to provide the chief with a fixed quantity of food.

In *Mortlock*, according to Kubary, social ranks do not exist.

On the isle of *Kusaie* the chiefs have unlimited power. The common people are obliged to build houses and canoes for them and till their lands; the chiefs may always seize the goods and command the services of the people; the cocoanuts,

1) See above, p. 322

2) Waitz-Gerland, *VI* p. 165

which are rare, are for the chiefs alone; they receive a certain proportion of all the fish that is caught ¹⁾.

In *Yap* the lowest class (whom Gräffe wrongly calls slaves) are obliged daily to provide the upper classes with agricultural produce, and whenever the chiefs require it to aid in constructing houses and canoes. Whatever they possess, even to their wives and daughters, may at any time be required by the upper classes. Yet all labour is not exclusively incumbent on them. They are only bound to definite taxes, viz. to a tribute of victuals, and of mats and other materials for house-building; and their „slave-state” consists rather in a low and dependent condition than in being taxed with labour.

On the *Marianne Islands* there were three classes: nobles, semi-nobles, and common people. The common people were strictly separated from the nobles and entirely subjected to them. They were not allowed to navigate or fish or take part in any other pursuit followed by the nobles. Their principal occupations were tilling the soil, constructing roads, building canoe-houses, making nets, carrying ammunition in war, cooking rice, roots, etc. As they were forbidden to use canoes and fishing implements, the only fish they could procure were eels, which the nobles disdained; and even these they might only catch with the hand, not by means of nets or fish-hooks).

In *Pelau*, according to Kubary, there are no social classes; but the wants of the chiefs are generally provided for by the work of dependent relatives, who are treated as adopted children and may at any time leave their employers, Semper, however, speaks of a despised working class.

On the *Kingsmill Islands* there are two subjected classes. One is the class of the *te torri*, who live as vassals on the lands of the great landholders; they get a small piece of land for their own use; they must provide their lord with men when at war, and bring him the number of cocoanuts he desires, and what he needs for his household. The lowest class are the *te bei*

1) Waitz-Gerland, V, 2, p. 121

2) Ibid, p. 112.

or *kaungo*. They have no property, no land to live upon; they live with the great landholders by whom they are maintained; they on their part must work for their lords, i. e. fish, prepare food, etc. The lord, by giving them a piece of land, can raise them to the class of the *te torre*. These two classes have no voice in government matters; they follow their lord without grumbling; his will is their will; an offence against the lord is considered by them as a personal offence, and avenged as such. Generally no one marries outside his class. In ordinary life there is no difference between master and vassal; they drink, dance, and play together; they wear the same kind of dress.

We shall inquire now what is the condition of the lower classes in Melanesia.

Rochas states that in *New Caledonia* the common people enjoy a rather independent position, they have to perform some services for the chiefs, which chiefly consist in cultivating their lands; but always own a piece of land themselves. They are, however, sometimes killed by the upper chiefs for cannibal purposes. Glaumont enumerates the following classes: sorcerers, warriors, common people, slaves. But he adds that the chief himself, however powerful, would not dare to take away the field of taros or ignames belonging to the least of his subjects. According to Branne there are two classes: numerous chiefs of various kinds, and serfs, over whom the former, especially the superior chiefs, have the right of life and death¹⁾.

In *Fiji*, according to Williams, the lower classes were formerly heavily oppressed. The chiefs looked upon them as their property, and took away their goods and often even their lives; this was considered „chief-like.” There also were professed hair-dressers of the chiefs. Waterhouse states that many poor men could not procure a wife; they then borrowed one from a chief, and so became his retainers. Fison, speaking of the inhabitants of certain villages, says: „These are of the

1) Rochas, pp 245, 246; Glaumont, pp 74, 75, Branne, p. 246

lowest rank, or rather of no rank at all. They are *kaisi*, the descendants of „children without a father.” They are *vakatau ni were* (husbandmen), but they are not yeomen like the *taukei*. Neither the lands they cultivate, nor the town lots on which they dwell, are their own. They are not even tenants. They are hereditary bondsmen, *adscripti glebae*, whose business it is to raise food for their masters. Their lords may oppress them, and they have no redress. In times of peace they must work for them, and in war time they must fight for them to the death”¹⁾.

Codrington remarks: „In the native view of mankind, almost everywhere in the islands which are here under consideration [*Solomon Islands, Santa Cruz Group, Banks' Islands, and New Hebrides*], nothing seems more fundamental than the division of the people into two or more classes, which are exogamous, and in which descent is counted through the mother. . . Generally speaking, it may be said that to a Melanesian man all women, of his own generation at least, are either sisters or wives, to the Melanesian woman all men are either brothers or husbands”²⁾ This seems to be sufficient proof that a subjected and despised lowest class does not exist, else the natives would not all be „brothers” and „sisters”.

This conclusion of ours is strengthened by consulting some other writers.

Guppy, describing the *Solomon Islands*, makes no mention of social ranks. Elton states that the chiefs have little power³⁾. Nor have we found in any of the other writers anything tending to prove that the common people are oppressed.

Regarding the *New Hebrides*, Hagen and Pincau, after speaking of the chiefs, state that the next class are the warriors, which rank can be obtained by a payment of pigs. They make no mention of a despised or oppressed working class. Inglis,

1) Williams, pp 23, 90, 157, Waterhouse, p 314; Fison, Land tenure in Fiji, p 342.

2) Codrington, The Melanesians, pp 21, 22

3) Elton, p 98.

as we have seen above, states that in the isle of Aneityum „there is no large proprietor, no powerful or wealthy chief; every man sits proprietor of his own cottage, his own garden, and his own cultivated patches.” Turner, speaking of the isle of Tana, says: „The affairs of this little community are regulated by the chiefs and the heads of families”; and in Eromanga, according to the same writer, the chiefs „were numerous, but not powerful” ¹⁾. From all this we may safely conclude that social life in the New Hebrides is democratically organized.

In *New Britain* the chiefs have very little power. All adult men are members of the *duk-duk* (powerful secret society) Social ranks do not seem to exist ²⁾.

Haddon, speaking of the *Western Tribes of Torres Straits*, says: „Each household is practically self-sufficient. So far as I could gather there was no division of labour as between man and man, every man made his garden, fished and fought” ³⁾.

Hunt, in his description of the *Murray Islands*, makes no mention of social ranks.

Generally speaking, we may conclude that in Polynesia and Micronesia there are lower classes destitute of land and entirely at the mercy of the landholders, whereas in Melanesia such classes do not exist. This agrees with our former conclusion, that in the two first-named geographical districts all land has, or had been appropriated, which is not the case in Melanesia. And if we consider the single groups of islands, we find that wherever in Polynesia there is still free land (Samoa, New Zealand), a more or less democratic *régime* prevails, and where in Melanesia all land has been appropriated (Fiji, there is a subjected lower class. There are, as we have already remarked, a few exceptions to this general rule (Rotuma, Pelau); but in these cases it is quite possible that such a class has formerly existed. For a great depopulation has

1) Hagen and Pineau, p. 335, Turner, Samoa, pp. 315, 328.

2) Parkinson, Im Bismarck-Archipel, pp. 142, 129.

3) Haddon, p. 342

taken place in Oceania, especially in Polynesia and Micronesia ¹⁾; and the value of land must have decreased together with the population. We have seen that in Rotuma all land is still held as property, but large tracts are out of tillage, though there are everywhere traces of former cultivation. In Pelau too, as has been said in § 6, the rights of property are still recognized, though there is but little land actually in cultivation. That the class of people destitute of land tends to disappear when population decreases, is strikingly shown by the following statement of Ellis' regarding Tahiti: „Although the *manahune* [lowest class] have always included a large number of the inhabitants, they have not in modern times been so numerous as some other ranks. Since the population has been so greatly diminished, the means of subsistence so abundant, and such vast portions of the country uncultivated, an industrious individual has seldom experienced much difficulty in securing at least the occupancy of a piece of land" -).

This depopulation may perhaps also account for the discrepancy between Semper's and Kubary's accounts of Pelau. Semper spoke of a despised working class; but Kubary, who wrote several years after, stated that there were no social ranks. It is quite possible that in the meantime the population had been so greatly diminished, that every one could obtain possession of a piece of land.

Ellis' above-quoted statement also shows that there is a fundamental difference between such lower classes as were found in Tahiti and slaves. The former were not at all forbidden to provide for themselves, and indeed, when the population had decreased, many of them began to cultivate a piece of land for their own profit. But in former times they were not able to do so, as all land was the property of the upper classes. The lower classes of Oceania were proletarians who wanted employment. The means of subsistence were the ex-

1) See Gerland, *Das Aussterben der Naturvölker*, pp 5, 6, and Mahler's recently published essay, pp 60, 61

2) Ellis, *Pol Res*, III p 96

clusive property of the upper classes, and therefore the poor were wholly dependent on them. In slave countries free labourers are not available, and therefore those who want labourers have recourse to slavery; in Oceania the labour market was overstocked, and therefore the poor eagerly asked the landlords for employment even in the meanest work ¹⁾).

There are some more details on record proving that labourers were not wanted.

In *Rotuma* „Polynesian or Micronesian strangers, *fa helav*, were usually married into different *hoag*, or adopted with the consent of all the members of the *hoag*. A few Fijians and Melanesians have become *fa asoa*, or helping men, of different chiefs; no women would have anything to do with them, and no *hoag* would adopt them. They remained on the island as long as they liked, and transferred their services as they liked; they were treated as inferior members of the *hoag*, to which they gave their services” ²⁾). In a slave country these Melanesians, looked upon as an inferior race and therefore not adopted, would have been eagerly taken as slaves and prevented from escaping, but here it is quite the reverse: they may stay if they like, but they may also go away if they like; nobody wants them.

What Hale tells us of the inhabitants of *Ponape* is also very remarkable. When it is feared that there will be overpopulation, some of the lower orders with their wives and children voluntarily go away in their canoes ³⁾). If these lower classes were slaves, they would not be allowed to emigrate; the masters would value them as their property and prevent them from escaping. Such is not the case here; they remove because there is no room for them.

We see that common labourers are little wanted in Oceania.

1) One reason why these islanders wanted little labour may have been that they relied for a considerable portion of their food on the fruits of trees which, when once planted, required little care

2) Gardiner, p 486.

3) Hale, p 85

Some kinds of labourers, however, are much in request in some of these islands.

Mariner states that in *Tonga* the esteem in which the different trades are held depends on their utility. Most people pursue the same trade as their fathers did before them, because they have learned it in their youth. This especially applies to those trades which are considered most difficult and therefore highly honoured. There is no law obliging a son to follow his father's trade; but it is the custom; and the hope of a high profit stimulates the energy of those who pursue a difficult trade. The noblest trades are those of canoe-builder and undertaker of funerals. They are followed by none but *mataboles* and *mooas* (2nd and 3rd classes), the *tooas* (4th class) being excluded from them. All other trades are followed by *mooas* and *tooas* alike, except three which the *mooas* consider beneath their dignity and therefore leave to the *tooas*. those of barber, cook, and agriculturist. The latter two, the most despised trades, are hereditary. Neither cooking nor cultivating requires any particular capacities, everybody is capable of following these pursuits, and those whose fathers were engaged in either of them have no other alternative but to continue in the same way. The esteem, however, in which an individual is held, does not only depend on the trade he follows, but on his ability in it. He who distinguishes himself in a lower trade enjoys more consideration than he who following a higher trade proves to be unqualified for it ¹⁾.

We see that those trades which require no particular abilities are most despised here, whereas skilled labour is highly honoured and performed even by the higher classes.

In some more cases it is stated that skilled workmen are better paid and more highly valued than unskilled.

In *Tahiti* the lowest class included those „who were destitute of any land, and ignorant of the rude arts of carpentering, building, etc., which were respected among them The fishermen and artisans (sometimes ranking with this class,

1) Mariner, II pp 159—162.

but more frequently with that immediately above it) may be said to have constituted the connecting link between the two" ¹⁾).

Wilkes states that in the *Kingsmill Islands* „the trade of carpenter is held in great repute." Professed tattooers are also highly esteemed and well paid ²⁾).

In *Fiji* the carpenters formed a separate caste, called King's carpenters, having chiefs of their own, for whom and their work they showed respect. Among the social ranks the 4th were distinguished warriors of low birth, chiefs of the carpenters, and chiefs of the fishers for turtle, the 5th were the common people ³⁾. We see that here too skilled workmen rank above the bulk of the people.

Skilled labour is thus highly valued in some of these islands. The skilled workmen, so far from being slaves, are held in high esteem; but those who have no peculiar accomplishments are obliged to perform the rudest and most despised work. This applies especially to the agricultural labourers. These are entirely dependent on the landowners, and there are more of them than can be profitably employed. They much resemble the proletarians of modern European countries.

The great significance of the appropriation of the land clearly appears, when we consider a phenomenon frequently occurring among savages. debt-slavery. Among some savage tribes there are rich and poor as well as in Polynesia; the poor, however, do not apply to the rich for employment, but are enslaved by them. Thus among the Tagals and Visayas, in the time of the conquista, most slaves had become such by being unable to pay debts they had contracted. If, in a time of famine, a poor man had been fed for some days by his rich neighbour, he became his slave. Sometimes the rich even placed a quantity of rice in some conspicuous place and lay on the look-out; if then a poor man came and ate of the rice, he was seized and enslaved ⁴⁾

1) Ellis, *Pol Res.*, III p. 96

2) Wilkes, pp. 99, 108

3) Williams, pp. 71, 32

4) Blumentritt, *Conquista*, pp. 56, 57

Such a thing would never have happened in Polynesia, and the reason why is evident. Among the Tagals and Visayas the poor were able, in ordinary times, to provide for themselves; they did not offer their services to the rich; the latter had to avail themselves of such an opportunity as a famine, to lay hands on them and compel them to work for them, not only during the famine, but afterwards when, if free, they would have been able to subsist independently of the rich. But in Polynesia the means of subsistence are permanently in the hands of the rich to the exclusion of the poor; therefore the rich need not compel the poor to work for them, for they are always at their mercy. Among the Tagals and Visayas the poor, though destitute of wealth, are not without resources. they have the free land always at their disposal, and it is only in extraordinary circumstances (e g. when the harvest has failed) that they are temporarily dependent on the rich. In Polynesia the poor are destitute of land, and therefore permanently dependent on the landlords.

Their state would even be worse than it actually is, were it not that they are useful in another, non-economic way: they strengthen their employers' force in warfare.

In *Tahiti* „in times of war, all capable of bearing arms were called upon to join the forces of the chieftain to whom they belonged, and the farmers, who held their lands partly by feudal tenure, were obliged to render military service whenever their landlord required it. There were, besides these, a number of men celebrated for their valour, strength, or address in war, who were called *ato*, fighting-men or warriors. This title, the result of achievements in battle, was highly respected, and proportionably sought by the daring and ambitious. It was not, like the chieftainship and other prevailing distinctions, confined to any class, but open to all; and many from the lower ranks have risen, as warriors, to a high station in the community”¹⁾.

In *Hawaii*, „when war was declared, the king and warrior

1) Ellis, *Pol Res.*, I p. 296

chiefs, together with the priests, fixed the time and place for commencing, and the manner of carrying it on. In the meantime, the *Runapai* (messengers of war) were sent to the districts and villages under their authority, to require the services of their tenants, in numbers proportionate to the magnitude of the expedition" ¹⁾).

In *Samoa*, as we have seen, those residing on land belonging to the chief are obliged to stand by him in war and peace ²⁾).

In *Tonga* some of the *tooas* (lowest class) were warriors and belonged to the retinue of the chief ³⁾

On the *Kingsmill Islands* the tenants must provide their lord with men when at war ⁴⁾).

In *Fiji*, according to Williams, all men capable of bearing arms, of all classes, took part in military operations; and Fison, as we have seen above, states that the people of the lowest rank in war time had to fight for their lords to the death ⁵⁾).

Warfare is an important factor in social life among primitive peoples (and not among primitive peoples only). The requirements of war may perhaps account for such an anomalous thing as the existence of slavery in Tahiti. Though it is not explicitly stated that the slaves fought at the side of their masters, we may suppose it to be so, as „all capable of bearing arms were called upon", the more so as we have seen that the slaves, after peace was concluded, often remained with their masters as voluntary servants ⁶⁾).

But leaving militarism and other secondary causes out of consideration, we may conclude that the facts observed in Oceania fully justify our theory, that slavery is inconsistent with a state of society in which all land is held as property.

§ 9. *Transition from serfdom to freedom in Western Europe.*

The conclusion we have arrived at is that the appropriation of the soil is a factor of great importance in shaping the social life of agricultural peoples¹⁾. When all land is held as property, a class of people destitute of the means of subsistence is likely soon to arise; such people must seek employment and live on the wages they can earn. But in countries where there is still free land, a class of free labourers dependent on wages does not exist; therefore in such countries the upper classes, especially the landowners, often resort to slavery as a means of procuring labourers. *Generally speaking, slavery as an industrial system can only exist where there is still free land.*

If this theory is correct, it must hold not only with regard to the simply organized societies of Polynesia and Micronesia, but also with regard to civilized peoples. Among such peoples too slavery must disappear as soon as all land has been appropriated. And as we know that in Western Europe all land is now held as property and everybody is personally free, whereas in former times, when these countries were far less densely peopled than now, slavery and serfdom existed, it does not seem unreasonable to suppose that the appropriation of the soil has had much to do with the disappearance of servile labour. This opinion is also held by Wakefield. „The serfdom of the middle-ages was for all Europe, what it is for Poland

1) We have not spoken of landed property among the Australian hunters, because there are reasons enough to be found, apart from the appropriation of the land, why slavery cannot exist among them. We will only remark here that among many Australian tribes property in land is stated to exist (see Dargun, pp 49, 50). Sometimes even the whole of the land seems to be held as property. „It seems curious” says Macgillivray „to find at Cape York and the Prince of Wales’ Islands a recognised division and ownership of land, seeing that none of it by cultivation has been rendered fit for the permanent support of man. According to Gi’om, there are laws regulating the ownership of every inch of ground on Muralug and the neighbouring possessions of the Kowraregas and I am led to believe such is likewise the case at Cape York.” Macgillivray as quoted by Haddon, p. 432

and Russia still ¹⁾, a kind of slavery required by the small proportion of people to land; a substitute for hired labour, which gradually expired with the increase of population, as it will expire in Poland and Russia when land shall, in those countries, become as scarce and dear as it became in England some time after the conquest" ²⁾). We think Wakefield is quite right here, and we shall adduce some facts in corroboration of this view.

But we must first repeat what we have already said in the Introduction. We confine ourselves in this book to an investigation of the facts of savage life. The study of these facts leads us to conclusions, some of which (and among these the conclusion we are now dealing with) have a wider bearing and can further our understanding of the history of civilized nations. But the scope of the present volume does not allow us to make any special investigation of this history and inquire whether the same causes can be seen at work here that have been found to shape the social life of savage tribes. Accordingly, we shall not try to prove that the appropriation of the soil has really been the main cause of the disappearance of slavery and serfdom in Western Europe. We only intend to show that the matter can be viewed from this side. We wish to claim attention for this important factor, that is commonly overlooked, and thus clear the way for future research. This and the next two paragraphs have to be regarded as a digression, standing apart from the main body of our book.

The character of these paragraphs may justify us in limiting our remarks to two countries, the economic history of which has of late years been the subject of thorough study by eminent writers, viz. England and Germany, and using only a small part of the literature existing on this matter. We have, however, taken care to consult none but first-rate authorities.

We have spoken of the disappearance of *slavery and serfdom*. In connection with this two remarks have to be made.

First. Slavery in the strict sense existed for a long time

1) Wakefield wrote in 1849

2) Wakefield, p. 326

in both England and Germany. In England, shortly after the Norman Conquest, slaves were still rather numerous. „The *servi* or slaves” says Ashley „whose average percentage for the whole land is 9, and who in some of the eastern and midland shires do not appear at all, or fall to a percentage of 4 or 5, rise in the country on the Welsh border and in the south-west to 17, 18, 21, and 24 per cent.” A century later, however, absolute slavery had disappeared ¹⁾ And in Germany there was also a class of *servi*, who had to perform whatever services the lords might require, and even in the 11th century, though their condition had already much improved, were sometimes sold apart from the land ²⁾

Secondly. The argument that leads us to conclude that slavery is inconsistent with a state of society in which all land is held as property, equally applies to serfdom. For the serf, as well as the slave, was compelled to work. There is a great difference between slaves and serfs on one side, and modern labourers and tenants on the other. The labourer has to work for his employer, and the tenant has to pay rent; but both can always declare the contract off and so put an end to their obligations. And even as long as the contract lasts, if they do not discharge their duties, they can only be condemned to pay damages; but the labourer cannot be compelled to work, nor the tenant to remain on the farm. The slaves and serfs of early times, however, were under personal compulsion. The slave was the property of his master, whom he was not allowed to leave. And the serf, as we so often read, was „bound to the soil,” „astricted to the estate”, „*an die Scholle gefesselt*”, which means that he was forbidden to remove from the spot assigned to him. Prof. Cunningham states that in England, in the 11th century „a very large proportion of the population were serfs who could not move to other estates or to towns” ³⁾, and Amira tells us that in Germany, in the

1) Ashley, I pp, 17, 18

2) Inama-Sternegg, II pp. 73, 74.

3) Cunningham, English Industry, I p 5

Middle Ages, the villeins (*Grundhorigen*) were not allowed to remove from the land which they cultivated¹⁾. Therefore our argument holds with regard to serfdom as well as slavery. For when all land has been appropriated, a landlord can always find free tenants who are willing to pay him a rent, and free labourers who are willing to work for him, and so he wants neither serfs nor slaves.

It is of some interest to emphasize what we have said concerning the difference between serfs and free tenants. A free tenant, whatever be the conditions of his tenure, can always remove from the land and cannot be compelled to cultivate it. A serf, whatever be extent of his obligations, is bound to the soil; if he escapes the lord can bring him back and set him to work again. The right of emigrating (German „*Freizugigkeit*“) is the true mark of freedom. And therefore, as soon as the obligations which were personal have become territorial, i. e. as soon as the services and payments which formerly were exacted from definite persons, are exacted from the cultivators of definite pieces of land as such, nobody being any longer obliged to become or remain the cultivator of any definite piece of land, — serfdom has ceased to exist, even though the services and payments have remained exactly the same.

The line of demarcation between free and unfree cultivators has not, however, always been drawn in a strict, scientific manner. Ashley, speaking of the 11th—14th centuries, says. „The term *libere tenentes* is elastic enough to cover men in very different positions . . . But the larger number of those known by that name were, clearly, virgate-holding villeins or the descendants of such, who had commuted their more onerous labour services of two or three days a week for a money or corn payment, and had been freed from what were regarded as the more servile „incidents“ of their position. What these exactly were, or, indeed, what was understood by free tenure, it is difficult now to determine, precisely because the lawyers and landlords of the time did not themselves know.

1) Amira, p. 138.

The most widely spread idea was that inability to give a daughter in marriage or to sell an ox or a horse without the lord's consent, for which a fine had to be paid, was the certain mark of servile tenure" ¹⁾).

Now we cannot wonder that the lawyers and landlords of the Middle Ages had no very clear ideas about serfdom and freedom. But modern writers on economic history should have the true distinction always before their minds. Some of them, however, we think fail in this respect.

In order to demonstrate this we must speak of a change which, in the later Middle Ages, took place in the manorial economy. The land belonging to each landlord had always been divided into two parts, viz. „that part cultivated for the immediate benefit of the lord, the *demesne* or *inland*, and that held of him by tenants, the land *in villenage*" ²⁾ These tenants were not, however, free tenants, but villeins bound to the soil and obliged to work on the demesne. „The whole of the land of the manor, both demesne and villenage, was cultivated on an elaborate system of joint labour. The only permanent labourers upon the demesne itself were a few slaves; all or almost all the labour there necessary was furnished by the villeins and cotters, as the condition on which they held their holdings, and under the supervision of the lord's bailiff". The labour dues of the villeins consisted of *week work*, i. e. a man's labour for two or three days a week throughout the year, *precariae*, i. e. additional labour at ploughing and at harvest time, and miscellaneous services ³⁾).

But in the course of time money payments were largely substituted for these labour dues. Commutation of the *week work* went on extensively shortly after the Norman Conquest, and commutation of the whole of the services occurs occasionally as early as 1240. „With the reign of Edward II com-

1) Ashley, I p 21.

2) Ibid., p 7

3) Ibid, pp 8, 9

plete commutation became general" ¹⁾). The cultivators had now to pay money to the lord instead of working on the demesne.

Though the change occurred at a time when personal serfdom was gradually declining, it is easy to see that this commutation is not identical with the transition from serfdom to freedom. A free tenant may by contract take upon himself to perform some kind of work for the landlord. This was the case in England where „the rendering of services reappeared in the seventeenth and eighteenth centuries, not as the incidents of villanage, but as a form of agreement which proved more or less convenient to one party and perhaps to both" ²⁾). On the other hand, it is quite possible that a cultivator who pays money instead of rendering services, is yet bound to the soil and devoid of personal freedom. Ashley, speaking of the 13th century, states that most of the cultivators „had continued to hold by servile tenure, as villeins or customary tenants, even when they had commuted all or most of their services.... There can be no doubt that ... they were bound to the soil; in the sense, at any rate, that the lord would demand a heavy fine before he would give one of them permission to leave the manor" ³⁾).

Now, though none of our writers on economic history explicitly say that these two things, the commutation of labour dues for money and the transition from serfdom to freedom, are identical, we think some of them do not sufficiently keep in view the difference existing between the two. Thus only can we account for the prevalence of a theory which seems to be becoming the current mode of explaining the fall of serfdom and rise of freedom.

This theory has been introduced by a German writer, Prof. Hildebrand. He distinguishes three stages of economic development: natural economy, money economy, and credit economy. In the system of natural economy goods are exchanged directly

1) Ibid, pp 22, 31.

2) Cunningham, English Industry, I p 476

3) Ashley, I p. 37.

for goods; when money economy prevails use is made of a means of exchange, money; and when credit economy has been developed goods are exchanged for a promise in the future to give back the same or a like value, i. e. on credit. Every nation begins with natural economy, for the use of money as a means of exchange supposes an abundance of labour or products of labour which enables people to procure the precious metals. As long as natural economy prevails capital does not exist; the soil and human labour are the only productive agencies. There are, therefore, two classes of people only; labourers and landowners. Sometimes every landowner is at the same time a labourer; in such cases democracy prevails. But it often occurs that labourers and landowners form separate classes. These are then mutually dependent on each other; for the labourer wants a landlord to give him employment and so enable him to earn his subsistence, and the landlord wants labourers to cultivate his lands. This interdependence effects that the relations existing between the two classes assume a durable character. The labour contracts are made to last for the life of the labourer or even become hereditary. The labourer is bound to the soil and forbidden to leave the manor.

As soon as money economy exists capital arises and takes its place as the third factor of production. The owning classes comprise now both capitalists and landlords. The labourer has no longer to apply to the landlord for employment, but can leave him and work for the capitalist; he is therefore no longer astricted to the soil. The wages he receives from the capitalist are paid in the form of money, and so the labourer is much freer than before, for this money can be turned to various purposes. Moreover, capital (as opposed to land) can be augmented to any extent, and this enables the labourer to become a capitalist himself.

The position of the labourers who remain on the land also undergoes a change. The landlord who brings the agricultural produce to the market can pay wages in money and therefore, hire able and dismiss incompetent labourers. His lands, worked

with free labourers who serve for wages, yield him a far greater income than formerly when they were cultivated by serfs. Moreover, the fixed labour dues of the serfs do not answer the purposes of an improved economy. It is thus the interest of the landlord to put an end to his fixed and hereditary contracts and loosen the ties with which natural economy had bound the agricultural labourer. The dues in kind and services are commuted for money payments. The labourer, who was a serf, becomes now either a free peasant or a free servant and day-wage worker who is no longer astricted to the soil, but can leave his employer whenever he likes and seek such work as most agrees with his capacity and in-oppression elination.

On the other hand, the employers have become independent of the labourers. In the system of natural economy the landlord took care not to lose his labourers, whom he wanted to cultivate his land; but now landlords and capitalists can always get as many labourers as they like and dismiss them as soon as they are no longer of any use. This leads to an oppression of the poor by the rich ¹⁾.

This is Hildebrand's theory, so far as the condition of the labouring classes is concerned. Natural economy, according to him, leads to serfdom, money economy leads to freedom.

We think this theory is wholly erroneous.

It would be much better not to speak of „natural economy” and „money economy”; for these terms are likely to lead to misunderstanding. The mere existence of money is of comparatively little consequence. A circulating medium arises as soon as it is wanted; and where the precious metals are unknown something else will do, as in Melanesia and among many Negro tribes, where shells are used for money. The existence of a circulating medium denotes a development of commerce; for barter on any extensive scale is hardly possible. Therefore we had better speak of self-sufficing and commercial communities. As long as each village is practically

1) Hildebrand, *Natural- Geld- und Creditwirthschaft*, pp 4, 8, 9, 14, 15, 18.

self-dependent money is not wanted; but as soon as the interchange of commodities takes any considerable dimensions the need for a means of exchange becomes pressing. And there is, indeed, a great difference in social structure between self-sufficing and commercial communities¹⁾; but if we ascribe this difference to the existence of gold and silver coins we arrive at false conclusions. A proof of this is the fact that Hildebrand thinks capital can only exist when there is money. Yet we know that the Germans have kept cattle from early times, long before money economy prevailed; and cattle are decidedly to be called capital; they cannot be classified under either of the only two means of production which, according to Hildebrand, exist in a system of natural economy: land and human labour; and in our Chapter on pastoral tribes we have seen that cattle-keepers form strongly marked capitalistic communities.

But even if we speak of self-dependent and commercial communities, we cannot admit that in the former labour must necessarily be servile and in the latter free.

First. How can natural economy, i. e. the absence of commerce, lead to serfdom? Hildebrand says: landlords and labourers are mutually dependent on each other, and so their relations assume a durable character, and the labourer is astricted to the soil. We think his meaning is the following. In self-sufficing communities the fluidity of labour which exists in modern society, is wanting. In such countries there can be famine in one district, whilst in a contiguous district there is plenty of food; similarly labour can be scarce in one place whilst it is abundant in a neighbouring place. Therefore a landlord cannot afford to let his labourers leave the manor; for as there is little intercourse between the different villages and districts it is difficult for him to procure other labourers. It is thus most

1) Absolute self-sufficiency does not appear to exist anywhere, not even among savage tribes, see above, p 255. But there certainly is a great difference between those countries which get their chief necessities directly by their own labour, and those which produce mainly for export.

convenient for him to bind his labourers to the soil and forbid them to leave him.

This may at first sight seem a reasonable explanation of the origin of serfdom. But on closer scrutiny it will be seen that this argument does not hold. When there is little intercourse, each landlord is dependent on the labourers of his own district; and there must be a great stability in the relations of the two classes. But this need not bring about an astriction of the labourers to the soil. The landlord cannot easily procure labourers from other districts; but it is even more difficult for the labourers to find employment in foreign parts; for such intercourse as there is, is kept by the ruling, not by the labouring classes. Therefore it is not necessary to bind the labourers to the soil; for they are already naturally dependent on the landlords of their own district. We think slavery and serfdom can only be accounted for by a general scarcity of labour. When labour is everywhere scarce a labourer who leaves his employer can everywhere find employment, whereas an employer cannot easily procure labourers; it is then the interest of the employer to prevent his labourers from leaving him. But the mere lack of intercourse limits the labourer in his choice of employment even more than it limits the employer in his choice of labourers.

Nor do the facts agree with this theory. We have seen that among pastoral tribes free labourers are frequently found, though labour is by no means fluid and the labourers are paid in kind, not in money. Among the natives of Hawaii, who lived under a system of natural economy, labour was also free. The passage in which Ellis describes the relation between landlords and cultivators has already been quoted by us, but it is remarkable enough to repeat here. „Sometimes the poor people take a piece of land, on condition of cultivating a given portion for the chief, and the remainder for themselves, making a fresh agreement after every crop. In addition to the above demands, the common people are in general obliged to labour, if required, part of two days out of seven, in cultivating farms, building houses, etc. for their landlord. A time

is usually appointed for receiving the rent, when the people repair to the governor's with what they have to pay. If the required amount is furnished, they return, and, as they call it (*komo hou*) enter again on their land. But if unable to pay the required sum, and their landlords are dissatisfied with the presents they have received, or think the tenants have neglected their farm, they are forbidden to return, and the land is offered to another. When, however, the produce brought is nearly equal to the required rent, and the chiefs think the occupants have exerted themselves to procure it, they remit the deficiency, and allow them to return" ¹). These cultivators are by no means astricted to the soil. They make a fresh agreement after every crop. If the produce brought is insufficient, they are either removed or by way of favour allowed to return ²).

Our conclusion is that, though in medieval Western Europe serfdom and natural economy existed at the same time, the former is not a necessary consequence of the latter.

Secondly. Does money economy, i. e. commerce, always lead to freedom? We know now that serfdom is not invariably connected with natural economy. Yet it might be that, wherever both natural economy and serfdom exist (as it was the case in the early Middle Ages) the rise of money economy always brought serfdom to a close.

The argument by which Hildebrand attempts to prove this is rather strange. The development of town life and manufactures, according to him, enables the labourers to find employment in manufactures; they are now no longer dependent on the landlords. The manufacturing capitalists pay them money-wages which they can spend in whatever way they like, and so they become more free than they were before.

1) Ellis, Pol Res., IV pp 416, 417

2) Among many hunters, fishers and hunting agriculturists slavery and serfdom are also wanting. But among these there are no labouring classes (as opposed to owning classes) at all, whether free or otherwise. Only the *Eskimos* have free servants.

We think this argument is quite insufficient. The labourers find employment in manufactures, says Hildebrand. But he had told us before that they were astricted to the soil. What enables them now to leave the landlords? Further: why do not the town labourers become slaves or serfs? Here Hildebrand's reasoning is very strange. They receive money-wages which they can spend in whatever way they like. Now one who receives money with which he can buy all kinds of commodities is in a certain sense more free than one who, under a system of natural economy, receives bread and meat which he cannot sell. But this has nothing to do with the legal status of the labourer. A slave who receives pocket-money from his master is free to buy with it what he likes, yet he remains a slave.

But the condition of those of the labouring classes who remain on the land also undergoes a change, according to Hildebrand. The landlord can now sell the produce of his land for money, and this money enables him to hire free labourers.

We cannot see why this should be so, why the mere possibility of paying money-wages (all other circumstances having remained the same) should lead to free labour contracts. We should rather think that the afflux of labourers to the towns of which Hildebrand speaks would make agricultural labour scarce, and each landlord would be most anxious to retain those labourers that had not yet escaped to the towns; they would now, more than ever before, be astricted to the soil.

Hildebrand, however, thinks it will be the interest of the landlord to put an end to the hereditary tenures of his serfs and work his lands with free labourers. And he adds that the dues in kind and services are commuted for money payments. The cultivator who was a serf becomes now either a free landholder or a free labourer.

Whether H. means to say that the commutation of dues in kind and services for money payments is identical with the transition from serfdom to freedom, does not clearly appear.

We think that the regarding of this commutation as the main fact in the economic history of the later Middle Ages lies at the root of the evil and has given rise to this theory.

Money economy, according to H., leads to commutation, and commutation is the same as, or at any rate leads to, the disappearance of serfdom.

What does this commutation mean? Formerly the peasants had to work on the demesne which was cultivated for the immediate benefit of the lord; in later times they paid money instead. What was the reason of this change? It must have been that the demesne was cultivated in some other way so that their services were no longer wanted. Sometimes free labourers were employed. „It is evident” says Ashley „that the lord would not have consented, first to partial and then to complete commutation, had he not been able to hire labourers”¹⁾. But the main reason was that portions of the demesne were let for rents. „If the lord found it his interest to let portions of the demesne instead of cultivating it through his bailiff or reeve, his need for the services of the villeins would be *pro tanto* diminished, and he would be readier to accept commutation”²⁾. The same was the case in Germany, where between the 10th and 13th centuries the extent of the land which the landlords kept in their own hands was continually diminishing, so that there was less and less use for the services of the villeins, and commutation took place on a great scale. The landlords, who formerly had taken the lead of agricultural operations, became now mere receivers of rent³⁾.

Now we must admit that commutation of labour dues for money payments was not possible before money was used. Yet the fact that commutation of services for payments in kind, which does not suppose money economy, also occurred⁴⁾, shows that the rise of money economy cannot have been the sole cause of this change. We may even go farther and say: if it has been a cause at all, it has not certainly been one of the principal causes. The commutation of the labour dues means

1) Ashley, I p 31.

2) Ibid, p 27

3) Inama-Sternegg, II pp 167—177.

4) See Inama-Sternegg, II p. 283

that the demesne was thenceforth either worked with free labourers or let for rent. The existence of a class of freemen dependent on wages cannot, however, be accounted for by money economy. Nor can we see how money economy can have led to the letting of the demesnes which the landlords had formerly kept in their own hands Ochenkowski supposes that in England, after the Norman Conquest, the need of the landlords for money led to commutation¹). But there is no reason why the landlords could not, instead of receiving money payments, obtain money by selling the produce of their lands. As long as there was no market for agricultural products the landlord, whether he himself had the lead of agricultural operations or let the demesne on condition of receiving a payment in kind, could not obtain money. As soon as there was a market he could make money in three ways: by working the demesne himself and selling the produce, by letting it on condition of receiving part of the produce, which he could bring to the market²), and by letting it for a rent in money. Money economy seems to have had little to do with the commutation.

Hildebrand's theory is: money economy led to commutation and commutation led to freedom. We have seen that the first half of this does not hold. What about the second half? Can the commutation have loosened the ties which bound the cultivator to the soil? We think not. For if the landlord could not let the villein who worked on the demesne leave the manor, because he was difficult to replace, he had exactly the same reason for keeping the villein who paid money astricted to the soil. The use of money and the rise of commerce had not augmented the number of agricultural labourers; they had even decreased, as many of them had gone to the towns. And it was even more difficult to replace the money-paying than the labouring villein; for the former had to be a fit person who

1) Ochenkowski, p. 11

2) This was done on a large scale by the German landlords towards the end of the Middle Ages, see Inama-Sternegg, III Part I p. 384.

could conduct his business well enough to be able at the end of the year to furnish the required sum, whereas any able-bodied man could perform agricultural labour under the supervision of the lord's bailiff. Our conclusion is that money economy did not lead to commutation, and that commutation did not lead to freedom.

Yet money economy, taken in the sense of town life and commerce, did sometimes affect the condition of the rural classes. Such was the case in Italy where, in the 13th century, the wealthy commercial cities took an active part in the emancipation of the serfs. Florence especially strongly encouraged their enfranchisement. In 1257 this city even went so far as to set free all the serfs in the surrounding country, indemnifying the lords. The city government pretended to act from Christian and philanthropic motives. „But” adds our informant „though the city governments of Central Italy were the first to pronounce themselves in favor of the personal freedom of the peasants, they by no means countenanced the idea of leading the land to those who had held it for centuries. On the contrary, the citizens endeavour to acquire landed properties, and when they have got them they put an end to the hereditary tenures and replace them by tenancies.” Many of the former serfs had to leave the lands of their ancestors and augmented the number of proletarians in the towns. They were replaced by leaseholders ¹⁾.

The disappearance of serfdom was thus accelerated by the measures of the Italian cities. How much of sentiment there was in these measures, and how much of self-interest, we do not know. But at any rate serfdom must already have been drawing to an end before the cities meddled with it. For a firmly established system that discharges an important economic function is not uprooted by mere sentiment. And so far as the self-interest of the citizens induced them to replace the serfs by free tenants, the latter system must have been economically more useful than the former, which was probably only kept

1) Kovalewsky, *Régime économique moderne*, pp 358—362.

up by the landlords because they were accustomed to it. Times had changed and the old system of cultivation had become obsolete, and the citizens of the towns, whom no personal relation bound to the serfs, expelled them and let the land to free tenants. Before their intervention there must already have been at work an internal cause, which effected that cultivation by serfs was no longer the most profitable mode of managing landed properties.

We do not mean to say that there was no internal connection between the transition from serfdom to freedom and the simultaneous rise of town life, commerce and manufactures. We think there was such a connection. But we cannot agree with the theory that the disappearance of serfdom was a consequence of the commercial development of Western Europe. It seems to us that the rise of commerce was not the cause of the decline of serfdom, but that both were effects of the same principal cause, the relative scarcity of land which made itself felt towards the end of the Middle Ages. As soon as people had to shift on a limited area the use of commerce, which enables each district to produce what it is most fit to, and so enhances the productiveness of labour, became more apparent than it had been at a time when there was plenty of land ¹⁾. Such is our impression; but we have not investigated the matter, and are not certain that our view is correct.

Hildebrand's theory has been accepted by some writers on economic history. Ochenkowski repeatedly asserts that the change in the condition of the rural population was the effect of money economy. Inama-Sternegg, in one passage of his excellent book on the economic history of Germany, expresses the opinion that in the early Middle Ages natural economy, defined by him as the absence of regular commercial intercourse, made a restriction of the labourers to the soil necessary. Prof. Cunningham, in a recently published little book, ascribes

¹⁾ According to Inama-Sternegg (I p. 382), in the Middle Ages increase of population, requiring an extension of the means of subsistence, led to the rise of towns and manufactures

the changes which in the history of ancient Greece and Rome took place in the status of the labouring classes to the prevalence of natural economy and money economy respectively ¹⁾. But none of these writers give any new argument in favour of the theory.

Our conclusion is that the rise of money economy was not the cause of the disappearance of serfdom. We shall inquire now whether Loria's theory, with which we agree, can further our understanding of the economic history of England and Germany.

§ 10. *The rural classes of medieval England.*

Of land tenure in England before the 11th century we do not know very much ²⁾.

The first detailed account of the economic condition of the country is contained in Domesday Book, in which William of Normandy embodied the results of an inquiry into the state of the kingdom he had secured.

„When Domesday Survey was compiled” says Cunningham, „every yard of English soil was as really, if not as definitely, subject to proprietary rights as it is now” ³⁾ We do not, however, think that much importance has to be attached to this statement; for there was still much uncultivated land and, though the king claimed a right of property over this land, it was not yet held as property in the strict sense of the word, which means that all except the owner are excluded

1) See Ochenkowski, pp 11, 15, 21. Inama-Sternegg, I pp 236, 237, Cunningham, Western Civilization, pp 73, 74, 95, 108, 192 According to Marx (Vol III Part II pp 332, 333) the substitution of money payments for dues in kind necessarily leads to free contracts between landlords and cultivators

Grupp (Zeitschrift für Kulturgeschichte, IV p 242) asserts that the rise of money economy caused the transition from slavery to serfdom We shall not discuss this point, as it is not directly connected with the subject of this paragraph

2) Ashley, I p. 13

3) Cunningham, English Industry, I p. 95.

from its use. This appears from what took place in 1305, under Edward I. „By an adjustment of boundaries considerable portions of the Crown forest were given over to certain barons, who gained personally; but the position of the tenants was so much altered for the worse that their case obtained special attention in the *Ordinance of the Forest*, by which their rights of pasture and common were secured”¹⁾. We see that these Crown forests had been open to the use of the peasants, so that practically there was still free land. And in this time of extensive tillage the common pasture played a great part in the rural economy²⁾.

Accordingly, rent in the modern sense did not yet exist. The landlords had abundance of land; but the land was worth little if it was not provided with people to cultivate it. „The rent of the proprietor now is directly connected with the physical character of his estate, its productiveness and its situation. The income of the lord of a *Domesday* Manor depended on the tolls he received, and the payments of his dependents; and thus was based on the way in which his estates were stocked with meat and men, rather than on the physical condition of the land. His income was a very different thing from modern rent”³⁾. Even in later centuries „a fertile estate would have yielded but little annual income, unless the necessary labour was attached to it”⁴⁾.

In this time the whole of Central England was covered with manors, and the mass of the rural population consisted of two classes: landlords and villeins; the latter were not all of the same condition, but none of them enjoyed entire personal freedom⁵⁾. Of those cultivators who are described as *freemen* and *socmen* some could „sell their lands without leave asked or given, but others could only do so on obtaining

1) *Ibid.*, p. 251

2) Oohenkowski, p. 7

4) *Ibid.*, p. 407

5) Ashley, I p. 13. Cunningham, l. c. I pp 95, 96.

licence from the lord" ¹⁾). Finally there were some slaves ²⁾). Every freeman was a landholder, therefore there was no class of free labourers. „The labourer, as a man who depended on some employer for the opportunity and means of doing his work, seems to have been almost unknown in the eleventh century" ³⁾).

All this agrees with our theory. All land had not yet practically been appropriated; therefore people could not be got to cultivate the land for the benefit of the landlords, unless they were deprived of personal freedom.

During the two following centuries population increased and land became more scarce. In the 13th century some lords already began to inclose portions of the waste, which had always been used for common pasturage, and „it was necessary to limit by the statute of Merton, in 1236, the lord's „right of approver" or improvement, by the condition that he should not take away so much as not to leave enough for the purpose of pasture" ⁴⁾). Forests were often fenced off and the rights of common pasture restricted ⁵⁾). We have already mentioned an instance in which the condition of the peasants was much altered for the worse by such measures.

The changes which, during the same period, took place in the condition of the rural classes, are grouped by Ashley under four heads: „1. the growth of a large class of free tenants; 2. the commutation of the week work for money or corn payments; 3. the commutation of the boon-days and other special services; and 4. the appearance of a class of men dependent wholly or in part on the wages they received for agricultural labour" ⁶⁾).

In a passage quoted in the last paragraph Ashley states that most of the „free tenants" were villeins who had commuted

1) Cunningham, I c pp 158, 159

2) Ashley, I p 17, Cunningham, I c p. 160

6) Ashley, I p 20.

their labour services for a money or corn payment, and had been freed from the more servile „incidents” of their position, such as inability to sell a horse without the lord’s consent¹⁾. Hence it follows that personal freedom, i. e. the right to leave the manor, was not regarded as characteristic of free tenure. Yet at the end of the 13th century every tenant was already permitted to sell his lands or parts of them²⁾. This transition from personal to territorial obligations was certainly due to the increase of population and consequent enhanced value of land. In early times labour was scarce and therefore the landlord could not let a cultivator leave the manor. But now land, or at least some pieces of land, had already acquired so much value that there were always people to be found ready to cultivate them on condition of paying certain dues to the lord.

The principal cause of the commutation of labour dues for money was that the lord let portions of the demesne instead of cultivating it through his bailiff or reeve. He had now less need for the services of the villeins; for these services had consisted mainly in working on the demesne³⁾. This change in the mode of cultivation was perhaps due partly to political circumstances (absence of the lord at court or in war), as in Germany it certainly was. But we think there were economic causes also at work. In early times, when land was abundant, it was necessary for the lord to keep the cultivators he wanted in personal subjection; he therefore made them work in his presence and under the supervision of his bailiff. But now the villeins had come to attach value to their holdings, they were no longer inclined to run away, for it would have been difficult for them to find land to live upon. The villein claimed an hereditary right to the land he cultivated, and the question as to whether he had any such right already began to be discussed by the lawyers⁴⁾.

1) See above, p. 352

2) Cunningham, l. c. p. 253

3) See Ashley, l. p. 27

4) Ibid., pp. 38—40.

At the beginning of the 14th century most of the cultivators were still bound to the soil¹⁾, but the first germs of a thorough change were already present. There were free tenants who could sell their lands; tenancies at will already occurred, though not frequently²⁾; and a class of free labourers arose. In Grossteste's rules, dating from 1240 or 1241, it is said that servants and retainers „are to do what they are bid immediately without any grumbling or contradiction; if they show any such disloyal spirit they must be dismissed, for many can be had to fill their places”³⁾. And there were also agricultural labourers who, though holding small pieces of land, had not enough land to live upon, and were partially dependent on wages. Even where the peasants were still obliged to cultivate the demesne, they did not usually perform such work themselves, but hired labourers to do it; the usual phrase is that they have to „find” a man for the work⁴⁾.

Here again our theory holds. Population had increased, land became scarce, and the transition from serfdom to freedom commenced. If the population of England had continued increasing, most of the villeins would probably have become freeholders or copyholders, whereas the lands that the lords had kept in their own hands would have been leased. And poor people who had neither land of their own nor capital enough to become farmers would have served for wages.

But an unexpected event entirely changed the economic condition of England. The Black Death, which made its first appearance in 1349, swept away a large part of the population. Whole villages were practically annihilated and large tracts of land went out of tillage. The economic consequences were such as we should expect. „As one immediate result there was great difficulty in getting labourers; the difficulty was aggravated in those cases where the tenants had died off and the

1) Ibid., p. 37.

2) Ibid., p. 29.

3) Cunningham, l c p. 225

4) Ashley, I p. 32.

lords were left with large holdings on their hands and no means of working them; while they lost the predial services of these deceased tenants on the home farm. There was consequently an immensely increased demand for hired labourers at the very time when their numbers were so much thinned, and it seemed as if the agriculture of the country was completely ruined" ¹⁾. Land was now again abundant, and so „instead of ousting tenants, lords of land found it hard enough to retain them even with lightened services" ²⁾. And the natural consequence was that the landlords attempted to re-attach tenants and labourers to the soil. Whether, as Prof. Thorold Rogers asserts, the customary tenants, who had commuted their labour dues for money, were forced back into the servile position of their ancestors, is not certain ³⁾. At any rate „we may grant that, now that labour had become so costly, the lords would insist on the exact performance of such labour dues as had not yet been commuted, and on the punctual payment of all money rents. There is much reason to believe, moreover, that they abused their power of imposing „ameracements" on their tenants in the manor courts for trivial breaches of duty" ⁴⁾. This severe and unaccustomed pressure on the villeins, who were becoming comfortable copyholders, resulted in Wat Tyler's revolt of 1381 ⁵⁾.

Nor were the labourers any longer allowed to dispose freely of their labour power „While the plague was actually raging parliament could not meet, but a proclamation was at once issued by the king with the advice of certain prelates and nobles, of which the preamble states that, „many seeing the necessity of masters and great scarcity of servants will not serve unless they get excessive wages", and that consequently

5) Cunningham, I c pp 356, 357 On the black Death and its effects see also Thorold Rogers, *Work and Wages* pp 5—26, and *The Economic Interpretation of History* by the same author, pp 24 sqq

the land can be scarcely tilled. Everyone, free or villan, who can work and has no other means of livelihood, is not to refuse to do so for anyone who offers the accustomed wages; each lord is to have the preference in hiring the men on his own estate, but none is to have too many men for his work; no labourer is to leave his employment before the specified time, nor to receive more rations or wages than he did in the twentieth year of the king and the common years before that; none are to give or take more wages in town or country" ¹⁾).

The depopulation of this time caused a reappearance of free land, i. e. of land which had practically no value, and so agricultural labourers were scarcely to be had. Therefore the lords to some extent reattached the cultivators to the soil.

These measures, however, were of little avail. It was not easy to prevent an employer from secretly giving more than the statutory wages. The penalties for infraction of the regulation were rendered more severe, the fines being replaced by imprisonment; yet the whole legislation proved a failure ²⁾).

And even if the statutes of labourers had been everywhere enforced, „many landowners would have been left in a position of great difficulty; if there was no one to do the work it did not much matter what they were to be paid, and in not a few villages scarcely any one was left to carry on the ordinary agricultural operations." Therefore new expedients had to be devised, of which the most general appears to have been the stock and land lease; „the new tenant took the land and the stock off the lord's hands and made in return a definite annual payment." These tenants „probably sprang from the class of free labourers, as the surviving villans who already had their own holdings, would not be so easily able to offer for a portion of the domain land which the lord desired to let" ³⁾).

Here again we see the consequences of the abundance of

1) Cunningham, l c p 306

2) Ibid, pp 307, 308

3) Ibid, pp 355, 356

land. The land alone could not fetch a reasonable price; stock and land had to be leased together.

As these leaseholders were taken from the labouring class, this measure, of course, still further diminished the supply of labour.

All these palliatives could not, indeed, better the position of the landlords to any considerable extent. They had to wait for an increase of population which would render to the land the value that it had before the Black Death. As, however, the plague recurred several times, the population appears to have scarcely increased ¹⁾).

The landlords remained in this difficult position till about 1450 ²⁾), when a new and very efficacious remedy was suggested to them: they applied a new mode of working their estates, which rendered them the practical command over the land, without need of a denser population. The extension of the wool trade and the dearth of labour made it far more profitable to keep large flocks of sheep than to grow corn. Consequently much land was laid down in pasture; there was a steady increase of sheep farming during the 15th century and a corresponding decrease of corn growing ³⁾).

In our Chapter on pastoral tribes it has been shown that the care of flocks and herds does not require much labour. We can, therefore, easily understand that after the rise of sheep farming there was far less need for agricultural labour than before. There had been scarcity of labour; now there was over-population and many people were thrown out of employment; for over-population exists, not only when there are more people than the land can support, but when there are more people dependent on wages than can be profitably employed by the owners of land and capital.

Sheep farming was introduced in the first place on the manorial demesnes, of which the lords had the free disposal. The

1) See Ochenkowski, p. 37

2) This date is given by Ashley, II p. 264

3) Cunningham, I c. p. 361.

demesne usually formed from one-third to a half of the whole arable area of a manor. Since the labour services of the villeins had been commuted the tillage of the demesne had furnished employment to many small tenants and landless cottagers who, partly or entirely, depended on wages. The substitution of pasture for tillage on the demesne, therefore, brought many of them to ruin; for none but a few shepherds could thenceforth be employed ¹⁾).

But far graver evils resulted from the appropriation by the lords of the commons and the land held by villeins or customary tenants.

The commons, i. e. the common pasture and waste, had always been used jointly by the lord and villeins. Whether the latter had any legal right to them is not certain; probably they had not; but they had always been accustomed to have the free use of them. Now the lords began to inclose large parts of these commons for the formation of sheep runs. The consequence was that many of the customary tenants, who had relied on the commons for pasturing their cattle, could no longer keep the cattle necessary for the cultivation of their holding. Their farming became unprofitable, and they had to leave their lands, which were instantly occupied by the lords and laid down in pasture ²⁾).

Even when the cultivator had not left his tenement, the lord sometimes appropriated and „inclosed” it

The inclosures which took place, especially in the 16th century, are a fact of much importance in the history of English agriculture. The term „inclosure” has two different meanings. In medieval England the lands of the villeins, with those of the lord interspersed between them, lay scattered in a number of acre or half-acre strips, no two strips held by one man being contiguous. This system, dating from a time of extensive tillage, fell short of the exigencies of advanced culture, and had to be removed before any improvement in the mode

1) Ashley, II p 267

2) Ashley, II pp 270 272, Cunningham, l.c p 362

of cultivation could be made. Therefore inclosures have often, especially in the reign of Elizabeth, been made with the common consent of all the landholders concerned, the result being that every tenant, instead of many scattered strips, obtained one or a few fields lying together. „But in the earlier part of the same movement, during the period which may be roughly defined as from 1450 to 1550, inclosure meant to a large extent the actual dispossession of the customary tenants by their manorial lords. This took place either in the form of the violent ousting of the sitting tenant, or of a refusal on the death of one tenant to admit the son who in earlier centuries would have been treated as his natural successor”¹⁾. It was this latter kind of inclosure that was condemned by several writers of the 16th century, for instance by Hales, who by inclosure did not mean „where a man doth enclose and hedge in his own proper grounds where no man hath commons. For such enclosure is very beneficial to the commonwealth; it is a cause of great encrease of wood; but it is meant thereby when any man hath taken away and enclosed any other men’s commons, or hath pulled down houses of husbandry and converted the lands from tillage to pasture”²⁾.

Ashley, discussing the question as to whether the lords had a right to turn out the villeins, arrives at the conclusion that „during historical times and until comparatively modern days, the cultivators of the soil were always in a condition of dependence, and held their lands at the arbitrary will of their lords. For centuries the lord knew no other way of getting his land cultivated, and had no wish to get rid of a tenant; whenever he did so, it was altogether exceptional. But with the tendency to limitation and definition so characteristic of the feudal period, custom tended to harden into law, and it would seem to have been on the point of becoming law when a change in the economic situation, — the increasing advantage of pasture over tillage, — prompted the lords to fall back on their old

1) Ashley, II pp 272, 273

2) Cunningham, I.-p p 474

rights. Then followed a struggle between a *legal theory becoming obsolete*, but backed by the influence of the landowners, and a *custom on its way to become law*, backed by public sentiment and by the policy of the government" ¹⁾).

This is in perfect keeping with our theory. In former times land was abundant, and therefore the lord „had no wish to get rid of a tenant," for he „knew no other way of getting his land cultivated." But now sheep farming made appropriation of the whole of the land possible, and so the lord was no longer in need of the villeins; he even went so far as to evict those whom his ancestors had attached to the soil. And even where the cultivators remained on the land, they often, and not always voluntarily, became leaseholders instead of copyholders; and „in many cases a lease was but a stepping-stone to tenure at will" ²⁾ The lords no longer contented themselves with the customary payments; instead of villeins they wanted leaseholders, whose rents they could raise at the end of each term, according as the value of the land had increased. „Rents were raised with great rapidity, as the tenant had to pay a sum equivalent to the utility of his holding as part of a large pasture farm." ³⁾

There was also far less need for agricultural labourers than before. „The decay of tillage and lack of rural employment, during this century," says Prof. Cunningham „rest on unimpeachable evidence" ⁴⁾. In the 14th century „the problem of the unemployed, as it now presents itself, had not yet arisen." But the agrarian changes „deprived great numbers of the agricultural labouring class, — small customary tenants and cottagers, — of the means of support in their old places of abode, and sent them wandering over the country" ⁵⁾.

The appropriation of the whole of the land had thus given

1) Ashley, II p 281

2) Ibid, p 284

3) Cunningham, l c. p 408

4) Ibid., p 393.

5) Ashley, II pp 336, 352.

to the rural economy of England a new and essentially modern character there were now leaseholders and tenants at will, labouring poor and unemployed. And the ancient institution of serfdom could not hold its own in the presence of such thorough changes. „The slow agricultural revolution which rendered their services less useful to the manorial lords, gradually set the villans free by removing the interest their masters had in retaining a hold upon them”. „In some instances the exaction of predial services from villans by manorial lords can be traced as late as the time of Elizabeth, but though no change was made in the law, the lords seem to have found that it was not worth their while to assert their rights over the persons of their bondmen”¹⁾

There were, however, many parts of England in which scarcely any inclosures took place. Here the villeins remained on their lands and gradually became copyholders. They were still bound to services, which, however, were generally commuted for small money payments to the conditions of their tenure were annoying rather than oppressive. Moreover, their obligations were no longer personal, but territorial, they were not astricted to the soil. And as they had an hereditary right to their holdings, they differed but little from freeholders. The „innocuous curiosities of copyhold” survivals of ancient serfdom, continued to exist until far into the present century²⁾.

Our theory can thus be of much use in accounting for the changes which have taken place in the rural economy of England. As long as there was still free land, i. e. land which, though sometimes claimed by an owner, could not fetch any reasonable price, the cultivators were astricted to the soil; but as soon as the proprietors had got the practical command over the whole of the land, many of the villeins were evicted and

1) Cunningham I c pp 361-476

2) See Ashley, II pp 286-288

3) See Gonner, Article „Bauernbefreiung in Grossbritannien” in Lexis' Handwörterbuch, 2nd edition, I pp 391, 392

replaced by leaseholders or tenants at will or became such themselves; and the remainder became copyholders, i. e. proprietors obliged to some services or payments without being personally unfree.

We shall inquire now whether in Germany too the appropriation of the whole of the land coincided with the transition from serfdom to freedom.

§ 11. *The rural classes of medieval Germany.*

In the time of the Merovingians the greater part of the country was covered with forests and people relied on the products of the forests for a considerable portion of their subsistence. Land was abundant, and even the cultivated land had hardly any exchange value ¹⁾.

Much new land was, however, already being taken into cultivation. The village communities, consisting of free peasants, as well as separate members of these communities, cleared considerable portions of the waste land lying round the villages. In the 8th century some communities already forbade individuals to reclaim land; but this was still of rare occurrence; generally speaking the waste could be appropriated by whoever chose to take it into cultivation ²⁾.

The bulk of the population consisted of free peasants. There were two unfree classes: slaves and *lites* (a kind of serfs); but these were not numerous ³⁾.

The free peasant, though he had plenty of land, was rather poorly off; he had no slaves and so could only dispose of the labour power of himself and his family; and in this time of extensive tillage the produce of each man's labour was small ⁴⁾.

Great proprietors were still rare. They worked their own lands with slaves. Sometimes, however, they gave pieces of

1) Inama-Sternegg, I pp 110, 111, 163-165

2) Ibid., pp 81-83.

3) Ibid., pp 72, 60, 70

4) Ibid., pp. 147, 148, 165

land in use, generally to slaves; for, says our informant, the free peasants did not like to take the land of the nobles and so make themselves dependent on them¹⁾. And when land was given in use to free peasants (especially by the church) this was done on very advantageous terms, often at a nominal rent²⁾

Land was thus abundant, slavery existed, and tenant farmers and free labourers were absent.

In the Carolingian period the clearing of forests went on continually. Some land was still reclaimed by free peasants, but much more by the great proprietors who controlled abundant labour forces³⁾. The lords were already beginning to claim much uncultivated land, the reclaiming of which they only allowed on condition of the cultivator subjecting himself to them. There was far less unappropriated land than in the foregoing period, and such as there was was claimed by the king⁴⁾. Yet we cannot speak of an appropriation of the whole of the land; for we know that a claim of the king to large tracts of uninhabited land is practically of little consequence. Accordingly our informant states that land was still abundant. The free peasants were already in a difficult position, not, however, because land was scarce, but because they could not provide the labour necessary to convert woods and marshes into arable land⁵⁾

In this period the free peasants began to be absorbed by the great proprietors. The latter wanted labourers and did their utmost to attract the common freemen to their estates. Many people placed themselves under the protection of nobles; others, being reduced to poverty especially through the institution of the *wergild*, and the compulsory military service which interfered with the cultivation of the land) fell into the hands of the lords; and some were straightway made serfs by violence. As the landlords had the right of jurisdiction and

1) Ibid., pp 119, 120

2) Ibid., pp 123, 124

3) Ibid., pp 207—217

4) Ibid., pp 220, 221, 279—284

5) Ibid., pp 382, 235, 236

other public rights, they could easily subject the small landholders under some pretext or even without any. Former free peasants, *lites*, and such slaves as had received a piece of land in use, though designated by different names, came to form practically one class, the labouring as opposed to the ruling class ¹⁾. A manorial organization arose similar to that which existed in England. There were some slaves for personal service and agricultural labour and a great number of dependent peasants of various kinds, who had to cultivate the demesne of the lord and yield him part of the produce of their own holdings ²⁾.

Free labourers were found rarely if at all ³⁾.

Our informant in several passages speaks of freemen destitute of land ⁴⁾. But these people are not in any way to be identified with the poor of modern times who depend on wages. They were generally foreigners who had no rights in any village community; but the lords were always ready to receive them and give them a piece of land in use on condition of their rendering services and paying tributes. The natural increase of the labouring population and immigration of foreign labour did not yet cause any difficulty ⁵⁾.

Most of the cultivators of this time had not the right of leaving the manors to which their holdings belonged ⁶⁾.

We see that in this period there was still much free land; slavery existed and serfdom was on the increase, leaseholders, tenants at will and free labourers were wanting. All this agrees with our theory.

In the next period colonization and reclaiming of waste land went on on a large scale. But at the same time the population increased and the value of the land increased with

6) Ibid., p. 367.

it. Lamprecht, speaking, of the 13th century, writes: „Colonization and reclaiming of land had entirely changed the condition of the rural population between the 10th and the 13th century. In the time of the Carolingians wood and land had still been regarded as inexhaustible goods of the nation, like the sun, air and water; but now the limitations of the geographical basis of national existence appeared more and more clearly. There had been an immense range of land to grow food upon; but now the supply of land became limited, chiefly and first on the Rhine, in Suabia and Franconia, afterwards in Saxony, and finally in Bavaria, the Tyrol, and Styria; people had to shift on a limited area. The soil became, more than before, an object of economic value; its price kept continually increasing. In the 12th century, in some prosperous districts, land seems to have attained twelve times the value it had in the 9th; and even afterwards, down to the second half of the 13th century, an increase of about 50 per cent. is to be observed. Taking into consideration that land was still regarded, especially by the ruling classes, as the only basis of social and political influence (though already other sources of large incomes were gradually arising), we may understand how intense the struggle for the possession of the soil must have been at this period”¹⁾.

The right of the king to unappropriated land was now enforced more strictly than before, and the lords began to claim a right of property over the commons surrounding the villages, which, however, were often still left to the use of the peasants²⁾.

However, there was no over-population as yet. The proprietors did their best to attract people to the vast newly colonized districts, especially to the eastern parts of Germany³⁾.

During the whole of this period the landlords went on subjugating the rural population, so that at the end of it the

2) Inama-Sternegg, II pp. 115, 145, 84, 85, 207, 209

3) Ibid., pp 47-27

peasant proprietors, who had once formed the bulk of the population, had almost entirely disappeared, and most of the land was taken up with the estates of the great proprietors ¹⁾).

But the increase in the value of land already made itself felt in the way in which the lords managed their estates. They less and less frequently worked their own lands; their chief aim was no longer the disposal of the labour of their dependents, but the receiving of rent. The labour dues were often commuted for money payments ²⁾).

Labour was not worth so much to the lords as it had been. They sometimes emancipated their slaves, retaining the land which they had given them in use ³⁾).

At the same time a class of free tenants arose. Lamprecht remarks that while the value of land had considerably increased the tributes which the villeins had to pay had remained unchanged for several centuries. In an economic sense the landlords had been dispossessed of a large proportion of their property in the land. Therefore it was not their interest to let serfdom continue.

„At this time, especially since the middle of the 12th century, the villeins and landlords of the most progressive districts settled their mutual relations by free contract. Serfdom was abolished, sometimes entirely, sometimes for the greater part, some formalities only subsisting. The former villein acquired the right to emigrate, and remained as a free tenant on the land he had till then occupied. Thus, by leasing his lands for terms of years, and sometimes for life or on hereditary tenancy, the landlord got back the full rent of his property; and this system, especially the lease for years, enabled him to raise the rent at the end of each term, according as the value of the ground had increased in the meantime” ⁴⁾).

Inama-Sternegg does not quite agree with this view of

1) Ibid., pp. 36–38

2) Ibid., pp. 70, 71, 63

3) Ibid., p. 64

4) Lamprecht, III p. 63

Lamprecht's. Even where the rent was higher than the former customary payment, he says, the leaseholder was free from the labour dues and additional payments to which the villein had been bound, so the transition from fixed payment to rent did not always mean an enhancement of the obligation of the peasant¹⁾ Yet this writer too states that the leasing of land became more and more frequent. There were free contracts between proprietor and tenant, which did not interfere with the personal liberty of the latter; even non-fulfilment of his obligations by the tenant had only pecuniary consequences²⁾.

We cannot but think that the reason given by Lamprecht for the transition from servile to free tenure is true. For even when the original rent was not higher than the former customary payment plus the value of the labour dues, the possibility of raising the rent after each term remained.

We hear of free tenants in this period, but not yet of free labourers. This is exactly what our theory teaches us to expect. Land, in some parts of Germany, had already acquired a high value; such land must have been very remunerative, and so people were ready to pay a rent for its use, even though there was still land to be had gratis or at a nominal rent, but far from the market and therefore less profitable. But the country was not yet so densely peopled that there were men who could not secure the use of any piece of land; therefore a class of people dependent on wages did not yet exist.

In the 13th century much new land was still taken into cultivation, in Western as well as Eastern Germany; but in the following centuries very little land was added to the arable area. The woods, which had formerly been regarded as inexhaustible, were no longer present in great abundance, and the rulers of the German states as well as the landlords exerted themselves to preserve the remainder and forbade the peasants to clear them. From the middle of the 14th century these prohibitive measures became general³⁾.

1) Inama-Sternegg, III Part 1 pp. 394, 395

2) Ibid., II pp. 203, 204

3) Ibid., III Part 1 pp. 4-13

As the population continued to increase, land became scarce. In many parts of Southern and Western Germany the lords parcelled out their lands in small portions, and farms of the size which had been customary for centuries became rare ¹⁾).

The rights of the peasants to the use of the commons, on which they had always relied for a considerable portion of their subsistence, were now restricted, and the lords asserted their claims to the commons more strictly than before ²⁾).

Another consequence of the increase of population was that cattle-keeping was no longer possible on such a large scale as formerly when the common pasture occupied a great part of the land. At the end of the Middle Ages there was a scarcity of meat, and people had to rely, more than before, on vegetable food ³⁾).

The need of the landlords for the services of the peasants went on diminishing. They no longer worked their own estates; nearly the whole of their income consisted of the payments in kind and in money which they received from their dependents ⁴⁾).

In Lower Saxony and part of Westphalia the lords, as early as the 13th century, emancipated considerable numbers of villeins in their own interest. For the villeins had gradually acquired some right to their holdings, and the landlords, by setting them free, got back the free disposal of the land, which they thenceforth let out to free tenants ⁵⁾).

In the 14th century the lords began to turn out peasants (*Bauernlegen*) and lease the land of which they thus re-acquired the free disposal ⁶⁾).

Free tenancies became now general, parts of the demesne, as well as lands which had been held in servile tenure, being

1) Lamprecht, V Part I p 82, Inama-Sternegg, I c p 212

4) Ibid, pp 261—265,

5) Ibid, p 220

6) Ibid, pp 176, 201, 249

leased. The increased demand for land enabled the lords to let small allotments at extravagant prices¹⁾

Even where the customary tenures remained, the obligations of the peasants, which had been personal in many cases became territorial, the holder of the land as such being subject to payments. And the conditions of this tenure were so little servile that sometimes nobles and knights received such land in use and took the obligations on themselves).

The difference between farmers and agricultural labourers now first came into existence. The latter most often held a small patch of land, but this was not sufficient to live upon, they depended on wages. Besides agricultural labourers there were male and female servants for household labour. The regulation of wages by law, which occurred especially after the ravages of the great plague, proves that in the southern and western parts of Germany free labour had become general. Such servile work as still remained was often done by labourers hired by the peasant to whose duty the work fell, as in the case of the English peasant who „found' a man²⁾.

All land was now held as property, consequently the land was more and more held by free tenants and worked with free labourers dependent on wages, whereas serfdom gradually died out.

In the 15th century, however, according to both Lamprecht and Inama-Sternegg, serfdom and even slavery reappeared.

Lamprecht, after speaking of the raising of rents by the landlords, adds. „But more disastrous in its consequences than all this was the manner in which the landlords dealt with the increasing surplus population of the farms occupied by their villeins. Formerly younger sons of villeins, as well as children of free parents, had removed to the woods for the purpose of clearing them, and it was with their help that

1) Ibid, pp 202—205, 208 210, 225, 251, 255, 256, 277; Lamprecht, I c p 82

2) Inama Sternegg, I c pp 46, 174 175

3) Ibid, pp 48, 50, 51, 213, 223, 241, 282 303—309, 314, 408, 413

the landlords had in the course of the 12th and 13th centuries extended their landed properties. In later times such younger sons had often gone to the towns or the newly colonized districts of Eastern Germany. Now there was a stagnation among them as well as among the small remainder of the free population. There remained no other alternative but to divide the farms of the villeins. But the interest of the landlord was opposed to this. He had no security of receiving rent and services from farms parcelled out into small allotments. Therefore he did not, as a rule, divide the farms into more than four parts; and those of the servile population who could not secure the use of such a small holding were regarded as slaves. This phenomenon, the origin of which went back to the first half of the 12th century, had till then been almost entirely foreign to the development of Germany. Together with a rural proletariat destitute of nearly everything, a real slavery came now for the first time into existence on German ground.... And this new slave class went on continually increasing; in the first half of the 15th century they already formed a considerable number, about whose fate patriots were very uneasy.... Nor did the evil stop here. The term slavery, used first with regard to villeins who occupied no farm, was soon applied to all villeins, in order to tax them more and more heavily and dispute their right of succeeding to the farms of their parents, which had been established at least since the end of the 12th century. Finally the landlords came to regard even free tenants as slaves and slavery as the only status of the rural population" ¹⁾).

We can easily understand that the lords designated these proletarians by the most contemptuous name they could devise. But were they really slaves? A slave, as opposed to a free labourer, is not allowed to leave his master. Now it is remarkable that Inama-Sternegg, describing the condition of the rural population in the different states of Germany, though he states that in the newly colonized eastern parts of Ger-

1) Lamprecht, l. c. p. 83; see also Inama-Sternegg, l. c. pp. 54, 55, 420.

many the peasants, who had been free, were restricted in their right of leaving their lords, mentions no such particulars of Western Germany ¹⁾. And the chief aim of the peasants, in their revolts at the end of the 15th century, was not to acquire personal freedom, but to retain the use of the commons, which the lords were appropriating ²⁾.

The peasants were, indeed, obliged to more services in the 15th than in the 13th and 14th centuries. But we cannot regard this as a mark of returning serfdom or slavery; for Inama-Sternegg explicitly states that the greater oppression of the rural classes in the 15th century was chiefly due to the increase of the services required by the rulers of the several German States. The services exacted by the landlords had rather diminished ³⁾.

The same writer, recapitulating his conclusions as to the condition of the rural population at the end of the Middle Ages, begins by saying that the cultivators, who formerly had had an hereditary right to the land on condition of paying a fixed sum, were now far more heavily taxed and had little security of remaining on the land ⁴⁾. We think that this is what the statements of our writers about the reappearance of slavery mean. The cultivators were not slaves, but impoverished and despised tenants at will and agricultural labourers.

At any rate, if there was slavery, it was of short duration; for in the 16th century eviction of peasants, which is the reverse of astringency to the soil, became of frequent occurrence. Ashley, who has consulted some of the best literature, states that „the Bavarian code of 1518 laid down that the peasant had no hereditary right to his holding, and not even a life interest unless he could show some documentary evidence. In Mecklenburg a decree of 1606 declared that the peasants were not *emphyteutae* but *coloni*, whom their lords could compel to give up the lands allotted to them, and who could claim no

4) Ibid. p. 420, see also, p. 311.

right of inheritance even when their ancestors had held the land from time immemorial. In Holstein, again, a great number of the peasants were expelled from their holdings, and such as remained became tenants at will" ¹⁾).

Serfdom, in Southern and Western Germany, thus died out towards the end of the Middle Ages, at a time when population had become numerous and land scarce.

The eastern parts of Germany had quite another agrarian history. Here serfdom was not common before the 16th century. From this time, however, and especially after the Thirty Years' War, it became more and more general. As this is quite a separate history we shall not speak of it any further ²⁾.

We think the above remarks on England and the older parts of Germany may suffice to show that our theory can throw some light on the agrarian history of Western Europe.

We are fully aware that the condition of the rural classes must have been determined by many more circumstances of greater and lesser importance. But it seems to us that the

1) Ashley, II pp 281, 282, see also Inama-Sternegg III Part II p 201.

2) On the history of the rural classes in Eastern Germany see Knapp Die Bauernbefreiung

It may be of some interest to point out the great resemblance between the rise of Roman *colonatus* and the rise of serfdom in Eastern Germany. In both countries most of the peasants were originally free (Weber Römische Agrargeschichte, p 244, Knapp, I p 32) The landlords, who formerly had passed most of their time outside their properties, when they lost their military function took the cultivation of their manors into their own hands (Weber, I c pp 243, 244, Knapp, I p 37) They soon acquired rights of jurisdiction over the peasants (Weber, I c p 260 Knapp, I p 33) and began to compel them to work on the demesne (Weber, I c p 244, Knapp, I p. 40) The cultivators lost the right of emigrating (Weber, I c pp 256—258, Knapp, I p 42) Even the *Bauernlegen*, i.e. the joining of a peasant's holding to the demesne, occurred in Rome as well as in Eastern Germany (Weber, I c p 247, Knapp, I pp 50, 55) And it is most remarkable that in both countries the rise of serfdom took place at an advanced period of their history

This proves once more that the institutions of different countries may closely resemble each other, even in many details, without the one country having derived its institutions from the other. For even the influence of Roman law cannot serve as an explanation of this resemblance, as Roman law takes little notice of *colonatus* (Weber, I c p 259)

general cause of which we have spoken in these paragraphs is second to no other in its operation ¹).

§ 12. *Open and close resources.*

We have said that among agricultural peoples slavery, as an industrial system, only exists where there is still free land; it disappears as soon as all land has been appropriated. We have also seen that slavery does not prevail to any considerable extent where subsistence is dependent on capital -). We may now combine these two conclusions into this general rule: *slavery, as an industrial system, is not likely to exist where subsistence depends on material resources which are present in limited quantity.*

1) We must admit that the facts of Roman agrarian history seem to disagree with our theory. In Rome slavery prevailed to a large extent at a time when the relative scarcity of land gave rise to the difficulties about the *ager publicus*.

We shall not attempt to solve this question. We will only mention our impression, on reading Weber's *Römische Agrargeschichte*, viz that, even in the time of the Empire, though some land fetched a high price, all disposable land had not yet been appropriated, and therefore the want of servile labour remained. At the beginning of the Empire free labourers were very scarce, and could only be got to help the landlords in sowing and at harvest time on condition of receiving a pretty considerable part of the harvest (Weber, l c pp 236—238). Under Augustus and Tiberius the procuring of slaves from abroad became very difficult and this led to kidnapping of men by the landlords (Ibid p 242). In the boundary provinces, even in later centuries, barbarians were imported and became *coloni* attached to the soil (Ibid, pp 259, 260).

Slavery proper declined from the beginning of the Empire (Meyer, *Alttertum*, p 71), but the *coloni*, who originally seem to have been free tenants, gradually lost the right of removing from the manor they inhabited (Weber, l c pp 242, 248—250, 256—258).

2) The reader will remember that there are tribes among which land is abundant, but nobody can live upon land and human labour only: the possession of capital is necessary, and those destitute of capital have to apply to the owners for employment. The best instance is furnished by the pastoral tribes.

We have purposely avoided speaking of countries in which all land has been appropriated and capital also plays a great part, as it is the case in the manufacturing countries of modern Europe. Here the structure of society is very complicated and difficult to disentangle. We think, however, that here also the most important fact is the appropriation of the soil.

A tribe or nation cannot subsist without labour (though the amount of labour required is sometimes small); but, besides this, material resources are always necessary. The resources which man uses to procure his subsistence are of two kinds: gifts of nature, and products of human labour. The latter are commonly termed capital; their supply is always limited. Most of the former (air, water, the heat of the sun, etc.) exist in unlimited quantity, i. e. there is so much of them that nobody wants to appropriate them. Land is also a gift of nature, and in some very thinly peopled countries, where there is much more fertile ground than can be cultivated, it has not any more value than air and water. But as all land has not the same properties, it soon comes to pass that the most fertile and most favourably situated land is appropriated by some men to the exclusion of others. This is the origin of rent. Finally, when the less valuable grounds have also been appropriated, free land no longer exists; there is no piece of land but has its definite owner¹). This last state of things has social consequences very similar to those which exist where subsistence depends on capital. In both cases indispensable means of production are in the hands of definite persons; therefore a man destitute either of land or of capital (according as subsistence depends on the former or the latter), cannot subsist independently of the owners, but has to apply to them for employment. Moreover, in both cases more than a limited quantity of labour cannot be profitably employed: the owner of capital, or of a limited space of land, cannot derive any profit from employing more than a certain number of labourers. Therefore in either

1) „The earth, as we have already seen, is not the only agent of nature which has a productive power, but it is the only one, or nearly so, that one set of men take to themselves, to the exclusion of others, and of which, consequently, they can appropriate the benefits. The waters of rivers, and of the sea, by the power which they have of giving movement to our machines, carrying our boats, nourishing our fish, have also a productive power, the wind which turns our mills, and even the heat of the sun, work for us, but happily no one has yet been able to say, the wind and the sun are mine, and the service which they render must be paid for.”
J. B. Say, *Économie Politique*, as quoted by Ricardo, p. 35

case slavery, as an industrial system, is not likely to exist.

These considerations lead us to an important conclusion. All the peoples of the earth, whether they subsist by hunting, fishing, cattle-breeding, agriculture, trade or manufactures, may be divided into two categories. Among the peoples of the first category the means of subsistence are open to all; every one who is able-bodied and not defective in mind can provide for himself independently of any capitalist or landlord. Among some of these peoples capital is of some use, and some valuable lands are already held as property; but those who are destitute of such advantages can perfectly well do without them, for there are still abundant natural supplies open to them. Among the peoples of the other category subsistence depends on resources of which the supply is limited, and therefore people destitute of these resources are dependent on the owners. We are not aware that this distinction has been made before; therefore we will suggest technical names for these two categories. We shall speak of *peoples with open resources* and *peoples with close resources*. We think the meaning of these terms is clear, and they may be convenient for use. The distinction is an important one. We suppose we have sufficiently proved that the relations between the social classes differ largely, according as resources are open or close: only among peoples with open resources can slavery and serfdom exist, whereas free labourers dependent on wages are only found among peoples with close resources ¹⁾. Our distinction may prove valuable in other respects also, e. g. over-population and lack of employment are unknown among peoples with open resources; war, which, when resources are open, has sometimes rather the character of a sport, becomes more serious when resources have become close, for then its object is to extend the supply

1) This is the general rule. We are fully aware that there are exceptions due to secondary causes, internal and external. Moreover, open resources do not necessarily lead to slavery or serfdom: there are many simple societies in which there are no labouring, as opposed to ruling classes, everybody, or nearly everybody, working for his own wants (e. g. among many hunters, fishers, and hunting agriculturists).

of land or capital at the cost of the enemy; pessimism is more likely to prevail among peoples with close than among peoples with open resources, etc.¹⁾. We shall not, however, enlarge upon these points any further.

Most savage tribes have open resources. All hunters have (with the exception, perhaps, of some Australians): neither the game nor the hunting territories are held as property. Further, most fishers: fishing is carried on in a simple manner and does not yet require capital. And finally, most agricultural tribes; among them *superest ager*, as Tacitus says of the ancient Germans.

Savage tribes with close resources are: 1° possibly some Australian hunters, if it is true that among them every inch of ground is held as property, 2° the Eskimos (fishers), who cannot get on without a boat, or a sledge and dogs, 3° all pastoral tribes, 4° the agricultural tribes inhabiting most of the Polynesian and Micronesian islands, the Fijians and perhaps a few agricultural tribes outside Oceania.

We shall not inquire whether the civilized nations of ancient and modern times have, or had, open or close resources. We will only remark that in Western Europe resources, from open, have become close. Yet they are not altogether close, as long as there are still thinly peopled countries open for emigration. The time is not, probably, far off when all countries fit for colonization by white races will have been occupied. Then the closeness of resources will make itself keenly felt, and severe calamities are likely to ensue.

In the following paragraphs we shall speak of the effect of secondary causes among agricultural tribes. We shall not, however, enter into many details. The difficulty, in our branch of science, is always, that we have no works of predecessors to rely upon. For instance, we shall speak of the influence of trade among agricultural tribes. Now, if any accurate researches had been made into the general effects of trade, we

1) See Wakefield, pp 126 -134 on the happiness of settlers in new countries

should be able to conclude that trade having been proved to have such general effects, it must have such an influence on slavery. But as such is not the case, we should be obliged, if we were thoroughly to investigate the subject, to inquire what are the general effects of trade. An equally close study of militarism, of the condition of women, etc. would be required. And as in this way our book would never come to an end, we shall content ourselves with giving a few outlines, which we hope may turn the attention of other ethnologists to the important problems which the ensuing paragraphs will contain.

§ 13. *Condition of women.*

As we have remarked before, the position held by the women of a tribe determines to some extent whether or not slaves are wanted. Where all the drudgery is performed, and can be performed, by the women, and the men do not want to relieve them of it, there is no great use for slave labour. But where women enjoy high consideration, the men are more likely to procure slaves who are to assist the women in their work.

We shall speak first of the latter fact, of slaves performing female labour. It is very often stated that slaves are employed for domestic labour. And as, in countries where slavery does not exist, domestic labour is nearly always incumbent on the women, slaves who perform such work alleviate the women's task. Where slavery prevails to a great extent it even occurs that slave-owners, female as well as male, have scarcely anything to do, all work falling to the share of the slaves. The slave-owners, in such case, from the aristocracy; the slaves, and the poor freemen unable to purchase slaves, are the labouring classes. We may remind the reader of ancient Rome, where the domestic slaves, the *familia urbana*, performed all domestic services required by the rich, and of the women of the upper classes in Mohammedan countries, who spend their time in idleness in the harems.

We have seen that among some pastoral tribes domestic labour is the chief occupation of the slaves. We do not recol-

lect having found any instance of a similar state of things among any agricultural tribe, and cannot think that such will anywhere be the case. A rich cattle-keeper can easily support, by the produce of his cattle, some domestic slaves who perform no productive labour. But among agricultural tribes it is otherwise: subsistence here depends almost entirely on labour; therefore slaves performing unproductive labour can only be kept if there are other slaves who till the soil and procure food for the family. It is not probable that the master will himself undertake the cultivation required to feed the slaves who assist his wife in her work; nor would the wife be glad to receive slaves from her husband, if she had to provide for them by working on the field. The Romans would not have kept a *familia urbana*, if there had not also been a *familia rustica*.

Hitherto we have spoken of unproductive female labour. But women, in primitive agricultural societies, often perform productive labour also: in many cases the tilling of the soil is incumbent on them. We may suppose that the introduction of slaves has often served to free the women from this task. We shall not, however, proceed to a closer examination of this point; for this would require a digression on the division of labour between the sexes, which falls beyond the scope of the present volume.

On the other hand, the place of slaves is often supplied by wives. We have seen that among the Australian hunters polygamy widely prevails and serves economic purposes. The same is the case among some agricultural tribes.

In § 8 the non-existence of slavery in most of the Melanesian islands has been left unexplained. We shall see now that in several of these islands a „slavery of women” prevails which bears much resemblance to slavery proper. Purchase of wives is in vogue; and most of the women are bought by the rich, many of whom possess a large number of wives. And the women must work hard to increase the income of their owners¹⁾.

Guppy, in his description of the *Solomon Islands*, states: „The powerful chiefs of the islands of Bougainville Straits

1) See Melching, p 19.

usually possess a large number of wives of whom only the few that retain their youth and comeliness enjoy much of the society of their lord. The majority, having been supplanted in the esteem of their common husband, have sunk into a condition of drudgery, finding their employment and their livelihood in toiling for the master whose affections they once possessed. I learned from Gorai, the Shortland chief, who has between eighty and a hundred wives, that the main objection he has against missionaries settling on his islands is, that they would insist on his giving up nearly all his wives, thereby depriving him of those by whose labour his plantations are cultivated and his household supplied with food. A great chief, he remarked, required a large staff of workers to cultivate his extensive lands, or, in other words, numerous women to work in his plantations and to bring the produce home" ¹⁾).

This statement is very remarkable. In the second Chapter of Part I we have seen that in these same islands of Bougainville Straits boys are captured from the neighbouring islands. Guppy calls them slaves, but at the same time tells us that they „enjoy most of the rights of a native of the common class" ²⁾). There is thus no difficulty in obtaining slaves; yet the captured men are not treated like slaves, nor is any drudgery imposed upon them, for the simple reason that polygamy perfectly serves the purposes of slavery.

In the *New Hebrides* polygamy also prevails. The price paid for a wife varies from 10 tot 20 pigs, „according to her capabilities as a worker in the yam-patch." „They [the women] learn in their girlhood all that fits them to be man's slave and toiler in the fields". „Women are degraded to the level of brute beasts, doing all the hard field work, and being made to carry loads which appear quite disproportionate to their ugly-shaped bodies and thin legs" ³⁾) Hagen and Pineau give

1) Guppy, pp 44, 45.

2) See above, p 91

3) Somerville, *New Hebrides*, pp 3, 5, 7, 4

a similar account of female labour, and add that a man's wealth depends on the number of his wives¹⁾.

De Vaux, speaking of the women of *New Caledonia*, says: „All the drudgery is incumbent on them. They perform the clearing and digging of the soil, carry on their backs crushing loads of ignames and taros to the village, and, if a chief has promised you assistance in some fatiguing work that you want to have quickly done, he will send you a gang of these miserable beings who may scarcely be called women” And Rochas tells us that the New Caledonians keep no servants, but have many wives instead; rich men have as many wives as they want for the cultivation of their fields²⁾.

In *New Britain*, according to Parkinson, „every man who can afford it buys many wives. For a wife is a capital that yields a fair interest; she works from an early age till her strength is spent; and when, from age or by being overtaxed with labour, she grows sickly and decrepit, she perishes unheeded by anybody. The wife is nothing but the beast of burden of her husband; she performs all labour, tills the soil, cleans the dwelling, prepares the food, and carries the reaped produce in heavy baskets far away to the market. The husband therefore regards his wife as a valuable property.” „The husband continually urges his wives to work, that they may earn much *dewarra* [shell-money] for him; for the more *dewarra* he owns the greater is the consideration and influence he enjoys. But the lot of the wives is not bettered by an increase in the wealth of the husband. The wives of a man who owns thousands of coils of *dewarra* have no better life and are no less overworked than the wife of a very poor man who has no property except his only wife.” And Danks states that „a man may have as many wives as he can afford to purchase. If he cannot afford to purchase one, and his credit is low, he may have to remain single. The headmen are generally rich men,

1) Hagen and Pineau, p. 331; see also Memcke, *Neue Hebriden*, p. 340

2) De Vaux, p. 330, Rochas, p. 229; see also Branne, p. 248.

hence they invariably have a number of wives, ranging from three to six" ¹⁾).

We see that these Melanesian wives supply the place of slaves. They are bought like slaves, they have to work for their owners like slaves, and their labour, like that of slaves, increases the wealth of their lords. Another point of resemblance is this. In slave countries it is generally the rich only who are able to procure slaves; poor freemen have to work for themselves. Here it is the rich who appropriate the women, and many of the poor have to remain single. Here, as in all countries where polygamy is practised, it is only the minority of the men who can live in polygamy, for everywhere the number of women is nearly equal to that of men. And as in Melanesia the rich, who otherwise would want slaves, have many wives to work for them, slaves are not required.

We cannot explain here why in Melanesia womankind is so much at a discount, whereas among some other savage tribes (e.g. on the North Pacific Coast of North America) the sex commands such respect ²⁾). But we clearly see what is the effect of this state of things. Much labour is wanted, otherwise the women would not have to work so hard, and the rich would not keep so many female labourers. Yet slaves are not kept, because the women supply the place of slaves.

One might object, that possibly the women are held in such a slavelike state because male slaves are impossible or very difficult to procure, or because the coercive power of these tribes is not strong enough to admit of the keeping of slaves, or because male captives, where they are introduced into the

1) Parkinson. Im Bismarck Archip l, pp. 98-99-101. Danks p. 294, see also Melchior, pp. 43-44.

2) The condition of women is not however equally bad in all Melanesian islands. Among the Western Tribes of Torres Straits, the women appear to have had a good deal to say on most questions and were by no means down-trodden or ill-used (Haddon p. 357, see also Meinike Die Torresstrasse p. 115). And Somerville speaking of New Georgia in the Solomon Islands says, "In the eastern part the treatment of women is notably good. I have but rarely seen them at work" (Somerville New Georgia pp. 405-406).

tribe (as in the islands of Bougainville Straits), are wanted for warriors. Shortly expressed the objection is, that slavery is not wanting because there exists a „slavery of women,” but „slavery of women” exists because slavery proper is wanting. We must own that this is quite possible. But, whatever be the cause of this „slavery of women,” as soon as it exists it renders slavery less necessary than it would otherwise be. War is frequent in Melanesia ¹⁾, so there is no physical impossibility of procuring captives. And though it may be difficult to keep male slaves subjected, — if the men were unable to impose all work on the women and obliged to perform their due share of it themselves, they would decidedly take more pains to procure slaves and set them to work. A low condition of women, though only a secondary factor, certainly is a factor which tends to make slavery proper superfluous.

§ 14. *Commerce.*

In § 1 of this Chapter we have found the following numbers of positive and negative cases among commercial agricultural tribes:

| | Positive. | Negative. |
|---------------|-----------|-----------|
| $a^1 + t$ | 7 | 3 |
| $a^2 + t$ | 19 | |
| $a^2 + c + t$ | 3 | |
| $a^3 + t$ | 3 | |
| $a^3 + c + t$ | 1 | |
| Total | 33 | 3 |

We use the term „commercial tribes” in a wide sense, as including not only those tribes among which many people subsist by trading, but those that exchange a considerable part of their produce for foreign merchandise. For instance, a tribe that grows corn for export is a commercial tribe in the sense we attach to the word.

We see that, with very few exceptions, all commercial

1) See the details given in Part I Chap II § 5

agricultural tribes keep slaves. This proves that among agricultural tribes the development of trade greatly furthers the growth of slavery.

We have not much to say in explanation of this fact. When speaking of the slave-keeping tribes of the Pacific Coast, we have already remarked that the development of trade tends to further slavery in various ways. Commercial tribes are likely to carry on a trade in slaves, and this makes the keeping of slaves very easy. Where the freemen take to commercial pursuits, they want others to perform the common drudgery for every-day subsistence. The trade itself may also require menial work: the articles of commerce have to be prepared and transported, trading vessels have to be rowed, etc. And, finally, commerce often leads to a development of wealth and luxury; a man can now, by the labour of his slaves, acquire not only the necessities, but the refinements of life ¹⁾).

The last point is an important one. In self-dependent agricultural countries the main use of slave labour consists in providing the master with food. If, then, a man keeps a large number of slaves who work for him, he is able to entertain his friends, or to keep a retinue of unproductive slaves or servants, whose wants are provided for by the work of the soil-tilling slaves. But where this is the sole profit one can derive from one's slaves, an owner who keeps a considerable number of them does not want to make them work very hard; he often contents himself with receiving a tribute, and so the slaves become serfs. In this way the slave-owner gets less out of his slaves than would otherwise be the case; but he does not want more, and he need not now continually

1) Cunningham (English Industry, I p. 77) justly remarks „While there is no opportunity for exchange it is not so well worth while for anyone to preserve a surplus: a very abundant harvest is more likely to be prodigally used within the year, and so with all other supplies, but the existence of opportunities for trade makes it well worth while to gather a store that far exceeds any prospective need and to stow in warehouses for sale all that need not be used by the producers to satisfy their immediate wants, the conditions are present which still further favour the accumulation of wealth“.

supervise their work. Slavery is not likely to exist on a large scale.

Where commercial relations with foreign parts are maintained, it is otherwise. A slave-owner who receives large quantities of agricultural produce from his slaves can now exchange them for foreign merchandise. Retaining for himself as much food as he wants, he exchanges the rest for such objects as are either useful and agreeable in themselves, or give him distinction among his countrymen. The use of slave labour becomes thus practically unlimited.

We must further take into consideration that slavery on a very large scale is only possible, where industrial crops are raised. „Tobacco and cotton” says Cairnes, „fulfil that condition which we saw was essential to the economical employment of slaves — the possibility of working large numbers within a limited space; while wheat and Indian corn, in the cultivation of which the labourers are dispersed over a wide surface, fail in this respect”¹⁾. And cotton and similar crops are only cultivated in large quantity where they are exported.

Of such „wholesale slavery”, as Bagehot terms it, we find a few instances among savage tribes

Köler tells us that in Bonny the great majority of the inhabitants are slaves. The keeping of slaves is very expensive, as agriculture and industry scarcely exist; all food has to be imported. The freemen are traders in palm-oil, and want large numbers of slaves to row the canoes in which this oil is transported²⁾.

Among the Ewe of the Slave Coast slavery is practised on a very large scale. Some men keep 200 - 300 slaves, who form their capital. The slaves are generally employed in carrying oil from the inland to the coast for sale to Europeans. The maintaining of order among such great numbers of slaves

1) Cairnes, p. 50. In ancient Rome, at the end of the Republic, plantations of olives and vines were worked with slaves, whereas cereal crops were raised on lands leased to *coloni*, see Weber, Article „Agrargeschichte” in Lexis’ Handwörterbuch, 2nd edition, vol. I p. 81

2) Köler, pp. 84, 154

requires great severity. Slavery marks all their institutions. It is a common saying with them that „the large water-tub does not go to the spring”, whereby they mean that freemen must not do such work as is only fit for slaves and boys ¹⁾.

Among the Garos, where cotton is the principal culture, two-fifths of the population are slaves. „The distinction [between freemen and slaves] is jealously preserved.... It is from the possession of a large number of them [slaves] that a man obtains influence amongst his tribe” ²⁾.

It is clear that among these tribes slavery would not prevail to such great extent, if the preparing and transporting of the articles of export did not require so much labour.

In these cases trade is the cause of „wholesale slavery”, not necessarily of slavery in general. „Retail slavery” may have existed among these tribes before they became so largely commercial. But, seeing that among them the extension of commercial relations has so greatly increased the use of slave labour, we may safely suppose that in several cases the development of trade has given rise to slavery among tribes which did not practise it before. This is also made probable by the list given at the beginning of this paragraph.

We shall not proceed to a closer investigation of this subject. We have already remarked that as yet we know very little about the general effects of trade and the place it occupies in social life among savages. And we must know more of this, before we can arrive at any accurate conclusion with regard to the influence of trade on the rise and growth of slavery.

When speaking of hunters and fishers we have found that the influence of trade is more considerable where manufactured goods, than where raw products are exported. This will probably also apply to agricultural tribes, viz if we take the term „manufactured goods” in a wide sense, as including agricultural produce. Raw products in our sense means articles which

1) Zundel, pp 408, 409, 387

2) Dalton, p 58 -

can be exported without any labour being previously applied to them, e. g. various kinds of stone and earth exchanged by Eskimos and Australians. The articles exported by commercial agricultural tribes are nearly always manufactured goods in this wider sense.

It might be interesting to divide the commercial tribes (in the wider sense) into three categories, according as they export agricultural produce, manufactured goods in the common, restricted sense, or articles purchased abroad (articles of transit trade), the last category comprising the commercial tribes in the restricted sense, and inquire what are the social effects of commerce in each case. But such a subject wants separate treatment; we cannot deal with it here. We will only express our opinion, that the significance of trade and industry among savages is commonly underrated. Whether we are right here will appear when these points have been more closely studied than they are now.

In another paragraph we shall have to speak of a peculiar branch of trade, the trade in slaves.

§ 15. *Slaves employed in warfare.*

In several cases it is stated that slaves are employed in warfare. Leaving out of regard the cattle-breeding agricultural tribes, of which we have already spoken in Chapter III, we find the following instances.

Thomson tells us that in *New Zealand* slaves accompanied their masters on fishing and fighting expeditions; and in another place he states that women and slaves accompanied the warriors to carry burdens¹⁾. According to Polack slaves, if they fought bravely, were sometimes made chiefs²⁾.

Dalton, speaking of the slaves kept by the *Garos*, says: „It is from the possession of a large number of them that a man obtains influence amongst his tribe. Each great chief can

1) Thomson, *New Zealand*, pp 150, 125

2) Polack, I p 35

go to war with a body-guard of 60 such followers entirely devoted to him" ¹⁾).

Among the *Lawas* too, according to Colquhoun, slaves are employed as warriors ²⁾).

In *Nias* slaves are often compelled to go to war with their masters; except when war is made upon the native village of the slaves. The slaves fight bravely, and in war bear arms like the freemen, but are never set at liberty for their bravery ³⁾).

Among the *Tagals and Visayas*, in the time of the conquista, generally freemen and vassals only took part in military operations, but sometimes slaves too, especially in naval wars: the slaves were then employed for rowing the boats ⁴⁾).

The forces sent out by *Lunda* chiefs on marauding expeditions consist of freemen and slaves ⁵⁾).

Among the *Angoni* the domestic slaves join their masters in the slave-raids ⁶⁾).

Bérenger-Féraud tells us that among the *Wolofs* the slaves of the king are soldiers and form his body-guard; they also collect taxes for him ⁷⁾

Among the *Barea and Kunama* the booty taken in war by a native-born slave belongs to his master ⁸⁾). Hence it appears that these slaves are employed in warfare

These are the only instances we have noticed, of purely agricultural tribes among which slaves perform a military function. There may be some more cases. Our ethnographers do not always enter into many details; therefore, when they are silent on the subject, this does not always prove that slaves are not allowed to fight. Yet, considering the very small num-

8) Munzinger, *Ostafri Stud.*, p. 484

ber of instances we have been able to collect, we may safely conclude that among most agricultural tribes slaves do not share in military operations.

This is what we expected. Slaves are not allowed to follow the noble military art, which is the privilege of freemen ¹⁾. A slave is not a warrior for the same reason that he is not a hunter. Moreover, it were too dangerous to trust him with weapons; he might be inclined to rise against his oppressors. And finally, when slaves are procured by capture in war or kidnapping, they would often have to fight against their own tribe, and would be very likely to go over to the enemies of their masters.

It is further remarkable that the tribes we have enumerated in this paragraph are all in the higher stages of agriculture, as may be seen from Chapter I. We have not found a single instance of hunting agriculturists employing their slaves in warfare. There are even hunting agriculturists of the lowest type, of whom it is explicitly stated that they do not allow their slaves to fight. Martius tells us that several wild tribes of Brazil keep slaves. The slaves are differently treated by the different tribes; but it is a general characteristic of slavery, that slaves are not allowed to bear arms ²⁾. And Azara states that in his time the Mbaya subsisted on hunting and fishing, and on the produce of the soil that was tilled to a small extent by their slaves and by a neighbouring tribe, the Guanas. Here too warfare was the business of freemen to the exclusion of slaves ³⁾.

This may, at first sight, seem strange. If it is true, as Powell asserts, (and it does not seem to us improbable) that slavery originated from the adoption of captives ⁴⁾, we should expect to find an intermediate stage, in which the captives, though al-

1) Among the ancient Germans the bearing of arms was a sign of freedom (*Amira*, p. 129)

2) Martius, p. 71

3) Azara, II pp. 109, 110.

4) Powell, *On Regimentation*, p. CXII

ready enslaved instead of adopted, still shared in military operations, the differentiation of the „regulative part of society” from the „operative part” (to borrow Spencer’s words) not yet being complete. The existence of slavery, mainly for military purposes, among the hunting Abipones and some pastoral tribes, seems to indicate such a stage. But among agricultural tribes we find no trace of it. Some agricultural tribes (of which the Iroquois are the classical instance) adopt their captives; then there are many which keep slaves who are not allowed to fight; and, finally, in the higher stages of agriculture, we find a few tribes among which slaves share in military operations.

Yet the cause of this seeming incongruity is not difficult to detect. Pastoral tribes are always stronger, from a military point of view, than primitive agricultural tribes. In Chapter III we have seen that the former often keep their agricultural neighbours in a state of subjection. Therefore it is much easier for them to employ their slaves in warfare than for hunting agriculturists; the latter, if they are to keep slaves at all, must take care to disarm them and so prevent them from doing harm.

Among agriculturists in the higher stages it is otherwise. There is often an elaborate division of labour; the governing classes are differentiated from the labouring classes, and the army is regularly constituted. Now it is not at all dangerous to enlist the slaves into the inferior ranks of the army, under the lead of the governing classes. The slaves, generally brought by traders from a far distance, have no longer to fight against their native tribe, but against strangers. And where slavery prevails to a great extent, the owners of numerous slaves, who form the aristocracy, will often be inclined to rely on their slaves for the maintenance of their power over the common freemen; whereas the slaves, who are no longer on the same footing of familiarity with the freemen as in primitive slavery, but despised and hated for being the tools of the aristocracy, regard their master as their natural protector and are willing to stand by him. .

Such was the course of evolution in ancient Rome. In the old times the slaves were not allowed to fight. „For entering the military service or taking on him any state office, a slave was punished with death”¹⁾. But later on a change took place. Speaking of the last days of the republic Ingram remarks: „In the subsequent civil conflicts the aid of slaves was sought by both parties, even by Marius himself, and afterwards by Catiline, though he finally rejected their services. Clodius and Milo employed bands of gladiators in their city riots, and this action on the part of the latter was approved by Cicero. In the First Civil War they were to be found in both camps, and the murderers of Caesar, those *soi-disant* vindicators of liberty, were escorted to the Capitol by gladiators. Antony, Octavius, and Sextus Pompeius employed them in the Second Civil War”²⁾. But the slaves soon began to take arms against those who had taught them to fight. „It is recorded by Augustus on the Monumentum Ancyranum that he gave back to their masters for punishment about 30,000 slaves who had absconded and borne arms against the state. Under Tiberius, at the death of Caligula, and in the reign of Nero, there were threatening movements of the slaves. Nor did the danger of servile insurrection disappear in the later stages of the Empire. The armies of the invading Goths were swelled by their countrymen who had been captured or bought by Romans. The slaves of Gaul almost *en masse* took part in the revolt of the Bagaudae, and forty thousand slaves joined Alaric at the siege of Rome”³⁾.

The last passage shows that even in a state where the power of the government and the military art are highly developed it is not safe to employ slaves in warfare. They may actually be the ready tools of the aristocracy; but in the long run they will come to form a dangerous element in the state. Yet, as it may be momentarily convenient to an

1) Ingram, p 44

2) Ibid, pp 51, 52

3) Ibid, pp 52, 53

ambitious statesman to employ them, it will sometimes be done; whereas among hunting agriculturists the danger is so obvious that it is not even attempted ¹⁾).

As only among a few agricultural tribes, and these in the higher stages, do slaves perform a military function, we cannot think that this has been an important factor in the rise of slavery; and it has probably been nowhere the only motive for making slaves.

§ 16. *Slaves kept as a luxury*

Sometimes we are told that it is considered an honour to possess many slaves. We shall give a few instances.

Among the Lampongs the keeping of slaves is indicative of wealth and power ²⁾).

Among the Tagals and Visayas, in the time of the conquista, a man's influence, power and reputation depended on the number of his slaves ³⁾).

Among the Ininga and Galloa it is the ambition of a freeman to have as many slaves as possible ⁴⁾).

Compiègne states that a Mpongwe asked him to give him a portion of his wages in advance, in order to buy a slave. „He will work for me and my wife” said the man, „and I shall be a person of rank” ⁵⁾).

We have only taken a few instances at random. It cannot be interesting to the reader to know how often the same fact has been noticed by ethnographers. For we may suppose that wherever slavery exists, the possession of a great number of slaves is a mark of distinction. The possession of slaves, like other property, is indicative of wealth; and where slaves are

1) Something analogous to the employment of slaves in warfare is their holding high offices of state. This occurs in some despotically governed African countries. In imperial Rome freedmen were appointed to high offices, see Ingram, pp 58, 59

2) De Groot, p 455

3) Blumentritt, *Conquista*, p. 53.

4) Lenz, p 59

5) Compiègne, *Okanda*, pp 194, 195

acquired by capture in war it shows the bravery of the captor. And where (as is generally the case among agricultural tribes) the labour of the slaves augments the revenue of their owner, the keeping of slaves is not only a sign but a source of wealth; and so the slave-owner is looked upon as one who has at his disposal a means of acquiring wealth. Martius, speaking of the wild tribes of Brazil, remarks that a chief who keeps many slaves can take more land into cultivation than other people. He has therefore always an abundant supply of food, which tends to increase the esteem in which he is held ¹⁾).

Where industry and art are little developed, slaves, besides wives and domestic animals, are almost the only luxury that is to be had. The reader will remember Levchine's statement about a rich Kazak Kirghiz, whose numerous horses gave him no profit, but great renown ²⁾). In the lower stages of culture a rich man cannot build a palace, or keep a motor-car, or buy pictures; he can only show his wealth to the public by keeping a large number of men or domestic animals continually running about him. Leroy-Beaulieu justly remarks: „The luxury of primitive times is very simple; it consists mainly in the grouping about the rich man (who most often is at the same time a man of high birth) of a large body of servants maintained by him, and in practising hospitality on a large scale. Among patriarchal peoples there is almost perfect equality of material life between men of different stations. Food, clothing, furniture even, differs but little” ³⁾).

But, though a rich man may display his wealth by keeping a great number of slaves, we do not mean to say that among any agricultural tribe all slaves are kept as a mere luxury. This seems improbable. Among pastoral tribes, as we have seen before, it sometimes occurs. The owner of numerous herds may support a large body of slaves, who have scarcely anything to do. But among agricultural tribes it is quite otherwise. Subsist-

1) Martius, p. 63

2) See above, p. 296

3) Leroy-Beaulieu, p. 80.

ence here is largely dependent on labour; much labour is required to provide for the slaves, and the master will not choose to work for them himself. The slaves, therefore, must perform at least as much productive labour as is required to provide for their own wants; and there is no reason why the master should not make them work somewhat more, to receive a surplus; the more so, as he is thus enabled to display his wealth in the other manner mentioned by Leroy-Beaulieu, viz. by practising hospitality on a large scale.

It is, of course, perfectly possible, and indeed it often occurs, that *some* slaves are kept as a mere luxury, either doing nothing at all, or performing personal services. But then there must be other slaves who, by performing productive labour, provide for their master, their fellow-slaves, and themselves. There cannot be a class of unproductive labourers, without there being a class of productive labourers too. We can only imagine one case, in which all slaves might be kept as a mere luxury. It might be, that there were a class of productive labourers consisting of freemen, who provided for the slave-owners and their unproductive slaves. There might, for instance, be an aristocracy, levying taxes on the common people and keeping slaves as a luxury. Such is indeed the case among the pastoral Beni Amer. It might also occur among agricultural tribes; but we have not found any instance of it.

Only in two cases have we found it stated that slaves are not productive.

Coquilhat tells us that on the Upper Congo the keeping of slaves does not increase the master's income; for agriculture is insignificant, and these tribes are not commercial. But he also states that the soil is tilled by old women and male slaves, so slaves do not seem to be kept as a mere luxury¹).

Among the Fanti, according to Finsch, slaves are articles of luxury; they are as lazy as their masters. They are acquired as prisoners of war or by purchase. Every noble Fanti owns numerous slaves; for it is a mark of distinction to keep

1) Coquilhat, pp. 265, 265

many of them. Some slaves carry parasols or fans; others by trumpeting announce the arrival of the patrician. Most of them do nothing at all. But the same writer states that the condition of the pawns (who, as has been shown in the first Chapter of Part I, are a kind of slaves) is much worse than that of the slaves in the restricted sense¹). We may therefore suppose that these pawns are the productive labourers.

We have never found it explicitly stated that among any agricultural tribe slaves are not employed in agriculture.

Our conclusion is that luxury has not probably been among any agricultural tribe the only motive for keeping slaves. Yet many slaves are kept as a mere luxury, and consequently among some tribes slaves are far more numerous than they would be if all of them were engaged in productive pursuits.

§ 17. *Other secondary internal causes.*

We have seen that among the tribes of the Pacific Coast the growth of slavery is furthered by their preserving food for the time of scarcity, whereas hunters who live from hand to mouth have less use for slave labour.

Hunting agriculturists much resemble true hunters: subsistence depends largely on the vicissitudes of the chase. But where a tribe lives principally on the produce of the soil, it is necessary to preserve the reaped fruits until the following harvest.

This leads to the same conclusion we had already arrived at, that slavery is more likely to exist among agriculturists of the higher stages than among hunting agriculturists²). We do not think that anything more need be said on this subject.

In our Chapter on pastoral tribes we have found that sub-

1) Finsch, *Die Goldküste*, pp 359, 360.

2) Among hunting agriculturists we have found 31 positive and 36 negative cases; among agriculturists of the higher stages 102 positive and 50 negative cases.

jection of tribes as such sometimes serves as a substitute for slavery, making slavery proper superfluous. The same proved to be the case among agriculturists who depend on cattle for a large portion of their subsistence. Something analogous to this is the levying of tributes on conquered districts that so often occurs in Oceania, as we have found in § 8. Outside Oceania we have found only one instance among agriculturists who do not depend on cattle, and even this is a doubtful one. Morgan states that among the Iroquois the council „regulated the affairs of subjugated tribes”¹⁾; but he does not enter into more details, so we cannot exactly know what he means

It is easy to understand, why subjection of tribes so seldom occurs among agriculturists. Hunting agriculturists, like true hunters, generally live in small groups and therefore cannot keep other tribes in a state of subjection. And among agricultural tribes of the higher stages men as well as women are continually engaged in agricultural labour; they are attached to the spot on which they live and, unlike nomadic cattle-keepers²⁾, cannot easily control a neighbouring tribe. The vanquished tribe, by retreating a little, can place itself out of reach of the conquering tribe. Only where, as on the small Polynesian islands, escape is not practicable, can a vanquished district be kept in a state of subjection. The Iroquois were an exceptional case. They were hunting agriculturists in this sense, that agricultural labour was performed by the women only, but at the same time they had a strong military organization: the five nations formed a powerful union.

In the higher stages of culture the growth of militarism enables strong agricultural peoples to subject their weaker neighbours; and the growth of population prevents the latter from receding. But among agricultural savages subjugation of tribes is rarely found.

1) Morgan, *Anc Soc*, p 136

2) See Salvioni's article on the struggles between pastoral and agricultural peoples.

§ 18. *External causes, especially the slave-trade. Recapitulation.*

In the second and third Chapters we have spoken of external causes. We have seen that for slavery to exist it is not sufficient that there should be some use for slave labour; it must also be possible to keep slaves; the freemen of the tribe must have a coercive power strong enough to keep the slaves subjected and prevent them from escaping. It has been shown that this coercive power is most strongly developed, where men have fixed habitations, live in large groups, and preserve food; and further, that the slave-trade greatly facilitates the keeping of slaves.

As for the first three points, it is easy to see that agricultural tribes of the higher stages are more settled, live in larger groups, and are more likely to preserve food than hunting agriculturists ¹⁾, so here again we find a reason why slavery is so much more frequent among the former than among the latter.

The slave-trade is of more interest to us here. It has been shown that among the tribes of the Pacific Coast a brisk trade in slaves was carried on, which must have greatly accelerated the growth of slavery; for it made the keeping of slaves much easier than it would have been, if each of these tribes had had to procure its slaves by capture in war. It has also been remarked that among pastoral tribes slavery exists in those parts only, where a trade in slaves with civilized or semi-civilized peoples is or was carried on, viz. in Arabia, the Caucasus, North-east and North-west Africa; whereas the pastoral tribes that live in outlying regions (Siberia, South Africa) do not keep slaves. We shall inquire now whether the same is the case with agricultural tribes, whether among them too slavery is of rare occurrence in those parts where the slave-trade has never been carried on.

In *North America*, at the time of its discovery, slavery did

1) See above, p. 297, and Grosse, p. 134.

not exist among any agricultural tribe. Negro slavery, practised by a few of them in later times, was derived from the whites.

In *South America* we have found only a few slave-keeping agricultural tribes; and the slave-trade formerly carried on by the whites may go far to explain the existence of slavery in these few cases. „The Brazilian native” says Martius „sometimes sells his children to people of white races, much oftener than to those of his own colour.” The principal object of warfare among the natives, in Martius’ time, was to capture slaves, whom they sold either to other tribes or to colonists of Portuguese extraction. The custom of selling prisoners to white colonists has strongly influenced native character. It was already practised very shortly after the discovery of America. Many Indians were transported to Spain and Portugal. The Mamelucos, living in San Paolo, made long and bloody wars upon the Indians. They are said during 130 years to have killed and enslaved more than two millions of Indians. Pedro de Avila, governor of Buenos Ayres, complained that the Paulistas carried on this trade in public and from 1628 to 1630 had brought 60,000 Indians to the market at Rio Janeiro. The whites continually availed themselves of the quarrels of the several Indian tribes, to procure such Indians as had been made prisoners. Even in Martius’ time this trade went on, especially in thinly peopled, outlying districts, where the Brazilian government could not prevent it. The wars of the Indians were simply marauding expeditions; their object was to procure prisoners for sale to Brazilian whites ¹⁾).

In *Oceania* slavery, at the time of the discovery of these countries, existed in Tahiti and New Zealand, where, as we have seen in § 4, it was of little economic use, and further in the western part of New Guinea, where it probably still exists. Here foreign influence clearly appears. In the eastern part of the island, that till quite recently had not been visited by foreigners (British and German New Guinea), slavery is un-

1) Martius, pp. 123, 131, 131 note, 154 note, 531—533, 772.

known; and the western part (Dutch New Guinea), where slavery exists, was for a long time under the rule of the sultan of Tidore ¹⁾. The tribute which the inhabitants of New Guinea had to pay to the sultan consisted partly of slaves; moreover, many Papuas were captured as slaves in the *hong*i raids ²⁾. This, however, is not sufficient to account for the keeping of slaves by the Papuas themselves. But we may consider, first that several districts on the coast are inhabited by a mongrel race of Papuas and Malays (e. g. on the Gulf of Maccluer), and secondly that the trade with Tidore, Serang, and other Malay countries must have thoroughly changed the natives' mode of life. Thus we are told that the Dorey people have become somewhat civilized by their intercourse with traders from the Moluccas ³⁾. We may notice here that all districts where slavery is carried on lie on the coast, and are therefore easiest of access to foreigners. And those districts of Dutch New Guinea of which it is stated that there are no slaves, Humboldt Bay and Hattam, have never been visited by *hong*i fleets ⁴⁾.

In the *Malay Archipelago* Mohammedanism already prevailed to a great extent before the conquista, and had even advanced as far as the Philippines ⁵⁾. Wherever slavery exists in the Archipelago, we are not certain that we have to deal with a phenomenon of unadulterated savage life. The influence of semi-civilized Mohammedans spreads over nearly the whole of the Archipelago.

In *India* the slave-trade with semi-civilized countries is, or was, also carried on by the natives. Cooper states that the Meshmees sell slaves to Tibet ⁶⁾. According to Colquhoun the Karen-nee sell many slaves to the Shans of Zimmé and these again to the Siamese ⁷⁾. And Rousselet tells us that among the

Kafirs „slavery exists within certain limits, but this criminal commerce would cease altogether if there were not such a ready sale for slaves at Djalalabad, Kounar, Asmar and Tchitral” ¹⁾).

From the *Caucasus*, as we have already seen, slaves are exported to Turkey on a large scale ²⁾).

Africa is the classical country of the slave-trade. Egypt and Ethiopia furnished a certain number of slaves to ancient Greece, and at Rome there was a regular importation of slaves, some of whom were brought from Africa ³⁾. Herodotus speaks of slaves sent to ancient Egypt as tribute from Ethiopia ⁴⁾. That in later times the African slave-trade, carried on by Arabs in East Africa and by Europeans in West Africa, assumed enormous proportions, need scarcely be said. In the later half of this century the Mohammedan East has still received a large supply of slaves from Africa, and even now the slave-trade has not entirely ceased. Ingram remarks: „The principal centres from which in recent times the supply has been furnished to Egypt, Morocco, Turkey, Arabia, and Persia, are three in number. 1. The Soudan, south of the Great Sahara, appears to be one vast hunting-ground. Captives are brought thence to the slave-market of Kuka in Bornu Negroes are also brought to Morocco from the Western Soudan, and from Timbuktu 2. The basin of the Nile, extending to the great lakes, is another region infested by the slave-trade 3. There has long been a slave-trade from the East African coast. The stream of supply came mainly from the southern Nyassa districts by three or four routes to Ibo, Mozambique, Angoche, and Kilimane. Madagascar and the Comoro Islands obtained most of their slaves from the Mozambique coast. . . . There are other minor branches of the trade elsewhere in Africa. Thus from Harar in Somâliland caravans are sent to Berberah on the coast, where there is a great annual fair. The slaves are collected from the inland Galla countries, from

Gurâgwe, and from Abyssinia, the Abyssinians being the most highly esteemed" ¹⁾).

We see that in most parts of the world where agricultural savages live slaves are, or were, purchased or captured by civilized or semi-civilized peoples; whereas in those parts where the slave-trade has always been unknown, slavery has never prevailed to any considerable extent.

We shall try to account for this fact. But we must first reply to a question which the reader may perhaps have asked, viz. why we have not at the beginning of this second Part discussed the question as to whether slavery is ever a phenomenon of genuine savage life, or has always been due to intercourse with higher races. We have not done so, because it seems to us that this question is one of secondary interest. When we see that among some savage tribe slavery is an institution playing a great part in native life and slave labour is of much use, we must come to the conclusion that slavery is perfectly consistent with the economic and social state in which this tribe lives, whether intercourse with superior races gave rise to it or it already existed before any such intercourse had taken place. And the conclusions we have arrived at in this and the foregoing Chapters, as to the various circumstances which further or prevent slavery, remain the same in both cases. Moreover, there are some savage tribes which at the time of their discovery kept slaves without, so far as we know, having had any intercourse with superior races: New Zealanders, Tahitians, and the fishing tribes of Kamtschatka and the North Pacific Coast of North America.

Yet, as we have already said, those parts of the world where we have found most of our positive cases are exactly those where the slave-trade has been carried on by civilized and semi-civilized peoples. Going on to account for this fact, we may remark first that it need not have been the slave-trade only that furthered the growth of slavery. The general intercourse with superior races may go far to account for the rise

1) Ibid., pp. 224, 225, 230—233.

of slavery, irrespectively of the slave-trade. We have seen that commercial tribes are more likely to keep slaves than others; and a savage tribe can engage in commerce with superior peoples, who buy large quantities of native produce and introduce foreign manufactures, to a far greater extent than with neighbouring savages who have not much to exchange, as their own and their neighbours' mode of life and industrial development are nearly the same. It has already been remarked that in New Zealand, when durable relations between the natives and the English had been established, the slaves kept by the former became much more profitable ¹⁾. Something similar to this may often have taken place.

Probably, however, the slave-trade has also had considerable influence. The mere fact that foreigners purchase or capture slaves from savage tribes cannot, of course, account for the existence of slavery among these savages; it may even result in the disappearance of slavery among them, if they find it more profitable to sell their slaves than retain them. But the slave-trade will often augment the opportunities of acquiring slaves. Slave-traders generally trade in other articles besides slaves; therefore they will often exchange some of the slaves they may have procured for something else. If some slaves are too weak to perform the journey to the coast, it is more profitable to sell them in the interior than to leave them behind. Moreover, the slave-traders often induce savages to make raids upon their neighbours and sell the captives they may secure; and if a savage chief has once learned in this way to kidnap slaves, he will perhaps continue to do so though there be not always a ready sale for them. In a word, the procuring of slaves becomes much easier.

Now we must bear in mind that an institution does not always exist in all countries where it would be economically useful. Not only is an institution which would further the public welfare often wanting, because the immediate interests of individuals are not concerned, but the individuals are not

1) See above, p. 316.

always aware even of their own immediate interests. Such may also be the case with slavery. It may be that, if slavery were introduced among some savage tribe, the tribe, or at least some members of the tribe, would profit by it, and that yet no slaves are made because there are not sufficiently strong motives for doing so, or because there are stronger motives working in the opposite direction. Tribes which have never kept slaves and are unacquainted with slave-keeping tribes, do not know the use of slavery; therefore they have to come to it gradually. Taking for granted that the first source of slavery, as seems very likely, was captivity in war, and that the captives, at first adopted, were afterwards differentiated from the main body of citizens, we can understand why slavery does not exist in all countries where the keeping of slaves would be profitable. It may be that it is the custom to eat the prisoners, or to sacrifice them, or to restore them when peace is concluded. It may also be that the adopted prisoners have from times immemorial been regarded as the equals of the tribesmen. In all these cases the new motive, the want of slaves, must be strong if it is to break through the established custom. The *vis inertiae* plays a great part in the history of mankind.

Returning to the slave-trade, we may remark that this entirely overturns the existing state of things. It enables the tribe to procure slaves who are not captives, and regarding whom therefore no custom has been established. Moreover, the tribe becomes acquainted with the institution of slavery, which it had not seen practised before. Now there is no longer any reason why the members of such a tribe should not purchase the slaves offered to them and set them to work. An external cause has sufficed to disturb the former equilibrium.

We have remarked before that the slave-trade facilitates the keeping of slaves, because purchased slaves are less likely to escape than captives¹⁾. Here too we have to deal with the

1) In ancient Wales „the price of a slave was one pound, but of one brought across the sea, a pound and a half The slave who was brought

vis inertiae rather than with an impossibility in the strict sense of keeping slaves. It will not, probably, often be the case that agricultural savages would be quite unable to retain their slaves, if they were really very desirous of keeping them; but it may often occur that they are not yet fully aware of the use of slaves, and therefore do not want to take the pains of supervising them, though, if slavery were thoroughly established, it would prove very profitable; in such case the objective want exists, but the subjective want is not yet felt. In this case, too, the slave-trade, by rendering escape of the slaves more difficult, will tend to establish the custom of keeping slaves.

Our conclusion is that slavery existed among some savages who had never had any intercourse with superior races, but that this intercourse, especially where the slave-trade was carried on, has often greatly furthered the growth of slavery.

In our Chapter on pastoral tribes we have remarked that a tribe living in the vicinity of inferior races is more likely to keep slaves than one surrounded by tribes of the same or a higher level of culture. Enslavement of lower races also frequently occurs among agriculturists; but the agriculturists of the higher races (e. g. Malays in the restricted sense, inhabitants of North Africa, etc.) are to be called barbarians rather than savages and have therefore been excluded from the survey of slavery given in our first Part.

Briefly recapitulating the conclusions we have arrived at with regard to agricultural tribes, we have to remark that the general character of their economic and social life is favourable to the existence of slavery: subsistence is easy to procure, and independent of capital, except where cattle are kept.

This applies especially to true agriculturists (agriculturists of the higher stages) as opposed to hunting agriculturists. The

from a distance was much less likely to escape, or even to attempt it, and was therefore a more valuable property, this principle still holds good among slave-owners" Cunningham, *English Industry*, I p 117 note 6.

latter bear much resemblance to true hunters, who hardly ever keep slaves; accordingly slavery is not so frequent among them as among true agriculturists.

Our general rule, however, requires an important qualification. Where all land has been appropriated, a class of free labourers commonly exists, and slaves are not wanted.

We have not entered into a thorough investigation of the influence of secondary or additional causes. A closer study of this matter will perhaps yield important results. What we have found with regard to these secondary causes is the following.

Slaves often perform female labour; on the other hand female labour sometimes serves as a substitute for slave labour.

Commercial agricultural tribes are far more likely to keep slaves than agricultural tribes among which commerce holds a very subordinate place.

Slaves are sometimes kept for military purposes, or as a mere luxury. These two circumstances, however, though they often lead to the keeping of a larger number of slaves than would otherwise be required, have not probably ever given rise to slavery.

Subjection of tribes as such, which among some pastoral tribes serves as a substitute for slavery, hardly ever occurs among agricultural tribes, except in Oceania, where slavery is already absent for the general cause mentioned above, the non-existence of free land.

Some external causes we had found before: fixed habitations, living in large groups, preserving of food, and the neighbourhood of inferior races, call for no special notice here.

Intercourse with superior races, especially where these carry on the slave-trade, proves to be a factor greatly furthering the growth of slavery.

We shall not give here a list of the causes found up to the present. We think it more convenient to place such a list at the end of our general conclusion.

CHAPTER V. — CONCLUSION.

§ 1. *General conclusion.*

The causes which lead to the keeping of slaves, and those which prevent it, have been divided by us into *internal and external causes*. These terms do not perhaps quite answer the purpose, but we cannot find other terms which would express our meaning better, without requiring a prolix circumlocution. We think, however, that it is clear what we mean by these terms. Slavery cannot exist, where there are no internal causes requiring it, i. e. where there is no use, economic or non-economic, for slave labour. A tribe will not keep slaves, even though its coercive power would enable it to do so, if there is no employment for them; in such case positive internal causes fail. The same obtains, where negative internal causes are found, i. e. where there are definite circumstances which make slave labour useless. The positive internal causes may also be called motive-forces. Slaves will not be kept, even where the best opportunities of procuring them exist, if there is no motive-force which requires the keeping of slaves, i. e. if they are not wanted.

But though, where motives for keeping slaves fail, no external causes will give rise to slavery, — even when there are such motives, slavery will not exist, if there are no external causes rendering it possible, i. e. if there is no opportunity of procuring and retaining slaves. Where neither capture

or purchase of aliens, nor enslavement of members of the tribe is practicable, or where the slaves can very easily escape, slaves cannot be kept, though there might be much use for them ¹⁾).

The principal internal cause which prevents the rise of slavery, or where slavery exists, tends to make it disappear, is the dependence of subsistence upon close resources. The most important result of our investigation is the division, not only of all savage tribes, but of all peoples of the earth, into peoples with *open*, and with *close resources*. Among the former labour is the principal factor of production, and a man who does not possess anything but his own strength and skill, is able to provide for himself independently of any capitalist or landlord. There may be capital which enhances the productiveness of labour, and particularly fertile or favourably situated grounds the ownership of which gives great advantage; but a man can perfectly well do without these advantages. Among peoples with close resources it is otherwise. Here subsistence is dependent upon material resources of which there is only a limited supply, and which accordingly have all been appropriated. These resources can consist in capital, the supply of which is always limited; then those who own no capital are dependent on the capitalists. They can also consist in land. Such is the case when all land has been appropriated; then people destitute of land are dependent on the landowners.

Where subsistence depends on close resources, slaves may occasionally be kept, but slavery as an industrial system is not likely to exist. There are generally poor people who voluntarily offer themselves as labourers; therefore slavery, i. e. a system of compulsory labour, is not wanted. And even where there are no poor men, because all share in the close resources, the use of slaves cannot be great. Where there are practically unlimited resources, a man can, by increasing the number of his slaves, increase his income to any extent; but a man who owns a limited capital, or a limited quantity of land,

1) Our „external causes” correspond with what has sometimes been called *condiciones*, as opposed to *causae* proper.

can only employ a limited number of labourers. Moreover, as soon as in a country with close resources slaves are kept, they form a class destitute of capital, or land, as the case may be; therefore, even when they are set free, they will remain in the service of the rich, as they are unable to provide for themselves¹). The rich have no interest to keep the labourers in a slave-like state. It may even be their interest to set them free, either in order to deprive them of such rights over the land as they may have acquired in the course of time, or to bring about a determination of the wages of labour by the law of supply and demand, instead of by custom. They will thus, without any compulsion except that exercised by the automatic working of the social system, secure a larger share in the produce of labour than they got before by compulsion.

Among peoples with open resources everybody is able to provide for himself; therefore free labourers do not offer themselves, at least not for employment in the common drudgery, the rudest and most despised work. There may be, and indeed there often are, skilled labourers whose work is highly valued and well paid; such people think it more profitable to earn their livelihood by means of their peculiar talents, than in the common way. A striking instance of this is the priest, whom we may call a skilled labourer performing non-economic labour; his remuneration, both in material goods and in influence and consideration, is greater than the income of a common agriculturist. But there are no labourers in the modern sense of proletarians, destitute of everything and obliged to seek employment in whatever work they can find. If therefore a man wants others to perform the necessary drudgery for him, and cannot impose it upon his wife, or wives, or other female dependents (either because women hold a high position, or because there is more mean work to be done than the women can possibly manage), he must compel other men to serve him; and this compulsion will often assume the form of slavery.

1) Viz if they have no opportunity to emigrate to countries with open resources.

In the first Part we have said that a slave is a man who is the property of another. We can now see the practical meaning of this definition. In slave countries labourers are held as property, and valued as such. If an employer loses a labourer, his income is lessened by it; if his labourer runs away, he eagerly tries to recover him. In countries with close resources it is quite the reverse ¹⁾. The labourers are not held as property, because they are not valued. If a labourer leaves his service, the employer knows that there are many others ready to take his place. Here it is not the employer who prevents his labourers from escaping, but the employed who, by means of strikes and trades-unions, try to prevent the employer from dismissing his workmen. We are, of course, aware that labour is always an indispensable factor of production; yet in many countries, e.g. in modern Western Europe, an employer does not care to keep a particular labourer in his service. The distinction we are making is familiar to all students of political economy. A kind of goods may be very useful, and even indispensable to man; and yet the supply of these goods may be so large, that a certain quantity of them has no value in an economic sense. Thus water is indispensable for man to live; but it is everywhere, or almost everywhere, found in such large quantity that it is not paid for. Equally, in thinly peopled countries, where fertile land is abundant, land has no value, though the men living in such countries cannot subsist without it. The same applies to labour. Production is impossible without it; but in modern Europe there are more labourers to be had than can be profitably employed; therefore an employer does not care to retain his labourers, if they leave him, he can always procure others who are ready to take their place and work at the lowest possible wages. We must bear in mind that this rule, in its strictest sense, applies only to unskilled labour.

1) Viz generally speaking Peculiar circumstances (e.g. a rapid development of industry) may bring about a temporary scarcity of labourers. But the growth of population in most cases will soon bring this state of things to an end.

Qualified labourers are often highly valued and able to secure great advantage, because their number is limited. It is therefore that the helpless state of people destitute of material resources appears more clearly in agricultural than in manufacturing countries.

This difference between countries with open and with close resources goes far to explain why slavery (and serfdom which is also a form of compulsory labour) has gradually disappeared in civilized Europe, whereas in thinly peopled countries it maintained itself much longer, and even now is sometimes introduced under some disguise („labour trade", convict labour, and similar expedients used in the tropics). In Western Europe unskilled labourers can always be had without compulsion, whereas the qualities required in skilled labourers cannot develop under a compulsory *régime*.

Always and everywhere have men been inclined to burden their fellow-men with heavy and disagreeable work rather than perform it themselves; and the strong have succeeded in imposing this work on the weak. Among some savage tribes it is the weaker sex who perform the drudgery; but in the course of progress the work that has to be done soon becomes too much for the women to manage. Then subjection of males arises, which presents itself in various forms, as subjugation of conquered tribes, or of the common people by the king and nobility, but often also as slavery or serfdom. Finally, when indispensable resources have been appropriated, the meanest labour is imposed upon those who are destitute of land and capital. *There is now no longer a personal, but an impersonal compulsion.*

It may at first sight seem strange. but it is true, that generally labour is much more at a disadvantage in countries where slavery does not exist, than in slave countries. In slave countries labourers are naturally independent; therefore he who wants to make another work for him, must enslave him and resort to all possible means of retaining him in his service. Hence the strange compound of severity and indulgence that has so often been observed among slave-owners. In

countries with close resources the landlord or capitalist has a natural advantage over his labourers; he need neither use severity nor indulgence to maintain his position. It is a general rule, that a man who takes express measures for maintaining his power over his inferiors has no natural ascendancy over them. The sergeant who alternately rages at his recruits, and allows them more liberty than he ought to do, is certainly not he who is morally their superior.

It must not, however, be supposed that we agree with those who hold that mankind has lived up to the present under an unsound social system, which enables some men mercilessly to „exploit” their fellow-men, but is destined soon to disappear and give place to a sound system, under which all men will combine to exploit the forces of nature, without exploiting one another. The socialists decidedly under-rate the social function of the ruling classes. It is not through mere chance that some men govern and enjoy the profits inherent to their high position, whereas others are governed and have to content themselves with a smaller portion of earthly goods. The military classes of a nation may keep the labouring classes in a state of subjection; but then the military classes are indispensable; if they did not defend the country, the labourers would get nothing at all. A great manufacturer may gain millions at the expense (as the socialists say) of his workmen; but then he organizes their labour so that it will be most effective, and finds the best markets for what they produce; but for him there would not be any employment for them ¹⁾. We may be certain that, if the profits of employers were curtailed to any considerable extent, the productive forces of the nation would cease to be utilized in such an effective manner as they are now, and the labourers would not gain by it. The most conclusive evidence as to the reasonableness of the present system is its long-continued

1) See also Inama-Sternegg (I pp 297, 298, 347, 348, 381, 391, II pp. 461—465) on the great part taken by the medieval landlords in developing the agricultural resources of Germany.

existence. If it were by mere chance or rascality that some men go ahead of the others, the great number would be perfectly able to rise against the few and overturn the system. But the few leading men maintain their position, which proves that they are indispensable.

We do not, of course, defend the excesses. Many institutions which in their own time were useful, have remained too long and become prejudicial to the welfare of society, thus justifying Goethe's saying about reason growing nonsense and benefits growing plagues. But even in combating the abuses, we defend the system; for when we eradicate the abuses we strengthen the system, which seems to us far better than overturning it because of the abuses. In a socialist society there would be ruling classes as well as now; the ignorant multitude would be ruled by unscrupulous politicians, and we seriously doubt whether the common people would be better off. Moreover, there would be an enormous waste of human energy and spirit of enterprise, such as may already be observed to some extent in certain bureaucratically governed countries; there would be stagnation and probably retrogression. We cannot, like some writers of to-day, regard socialism as a beautiful ideal, the realization of which would be very desirable, if it were only practicable. We think it is an ugly system, which would sacrifice the ultimate welfare of the human race to a questionable increase of present comfort.

After this digression we return to our main subject.

We have seen that slavery cannot exist to any considerable extent among peoples with close resources. But even among peoples with open resources it is not always found. Slaves perform the drudgery for their masters; therefore they are not wanted where little drudgery has to be done, or in other terms, slavery is not likely to exist where *subsistence is difficult to acquire*. Where men subsist by highly skilled labour, there can be little use for slaves; for the slaves cannot be made to perform such labour; and the little unskilled labour that is wanted is not profitable enough to admit of the keeping of slaves, who would have to be fed by the produce of

their masters' work. This is the principal reason why slavery hardly ever occurs among hunters, and one of the reasons why the Eskimos do not keep slaves. .

We find thus that, generally speaking, the keeping of slaves is economically profitable to peoples with open resources among which subsistence is easily acquired, and to such peoples only. But there are several *secondary causes*, internal and external, which bring about that slaves are sometimes kept by peoples with close resources, or by peoples among which subsistence is difficult to procure, and that on the other hand slavery is sometimes absent where resources are open and subsistence is easy to acquire.

Among the *secondary internal causes* we have noted in the first place the *condition of women*. There is no use for slaves, where all disagreeable work can be, and is performed by the weaker sex; Australian and Melanesian women supply the place of slaves. On the other hand, where the women hold a high position, and the men are desirous of relieving them of a part of their task, slavery is likely to arise sooner than otherwise would be the case.

Commerce probably exists among all savages. Even the Australian tribes mutually exchange rare kinds of earth for painting their bodies, and similar objects. But commerce has only a social importance, where the articles exchanged are manufactured goods in the widest sense, including e g. fish and agricultural products, in a word all articles the production of which requires a considerable amount of labour. Then the freemen who devote themselves to commercial pursuits want others to perform the common labour for every-day subsistence; moreover the preparing of the articles of trade requires more labour than would otherwise be wanted. And last, but not least, commerce leads to the development of wealth and luxury; slave labour is now wanted to provide the owner not only with the necessities, but with the comforts of life. Commercial tribes in the widest sense, — including 1° tribes which exchange native produce for foreign manufactures, 2° tribes which themselves produce and export manufactured

goods in the common, restricted sense, 3^o tribes which carry on a transit-trade, — are therefore far more likely to keep slaves than self-sufficing tribes.

We have seen that subjection of women is sometimes a substitute for slavery. Another substitute is *subjection of tribes* as such. This subjection occurs only, so far as savages are concerned, where peculiar circumstances render it possible: among pastoral tribes, which subject their neighbours to whom they are superior in military qualities, and in Oceania, where the limited area prevents the conquered from receding. Where a tribe subjected as such pays a tribute to the conquerors and performs services for them, there is not so much need for enslavement of individuals belonging to the vanquished tribe.

People who live from hand to mouth have less use for slaves than those who *preserve food* for the time of scarcity. The preparing of this food may require much labour which is very fit to be performed by slaves. We have seen that such is especially the case on the North Pacific Coast of North America.

Slaves are sometimes kept for *non-economic purposes*.

Warfare plays a great part in savage life, and we have found that the requirements of warfare sometimes prevent, but in other cases further the rise of slavery. Many savage tribes increase their population by introduction of foreign elements. This may be done for two reasons: men are wanted either for labourers or for warriors¹⁾. In the former case the introduction of aliens leads to slavery in its most general form of extratribal slavery. When warriors are wanted, slavery is not the most appropriate form; adoption of foreigners, such as was for instance practised by the Iroquois, answers the purpose better, because a man who enjoys the common privileges of a member of the tribe is more reliable in war than a slave. In such case militarism may prevent the rise of slavery, because all available men are wanted in war and have therefore to be

1) There is another reason foreign women are sometimes procured for wives. But we may leave this case out of consideration as being foreign to our subject.

placed on a level with the tribesmen. But where superior military qualities of a tribe render the employment of slaves in warfare (most often in the lower ranks of the army) possible, slaves are sometimes kept mainly for military purposes, especially where prejudices of race or colour prevent the tribe from adopting the foreigners. Then militarism furthers the growth of slavery; for slaves would not be wanted, if they did not serve as warriors.

Slaves may also be kept as a mere *luxury*. The possession of many slaves, like other property, everywhere tends to give the owner influence and reputation. Yet he most often also derives material profit from his slaves, namely from the total number of them, even where some of them do not perform productive labour. Only in a few cases does the sole use of slaves appear to consist in augmenting their owners' influence and reputation. This occurs among some pastoral tribes, where the rich are able to support a large number of unproductive labourers. But here the military use of slaves has perhaps co-operated in establishing slavery.

In the beginning of this paragraph we have spoken of *external causes*.

It is quite possible that a tribe does not keep slaves, though they would be very useful. The non-existence of slavery in such cases is due to external circumstances. It may be that the coercive power of the tribe is not sufficiently developed to admit of the keeping of slaves. It may also be that slavery does not exist, because it has not yet been invented: people have always been accustomed to deal otherwise with their prisoners than by enslaving them, and the idea of making slaves has never entered their minds. The coercive power is strongest where men live in *fixed habitations* (though several tribes of pastoral nomads also keep slaves), and in *large groups*, and are accustomed to *preserve food*. The *slave-trade* has considerable influence. It increases the coercive power by making escape of slaves more difficult; and by making a tribe acquainted with the institution of slavery and providing it with an easy means of acquiring slaves it often overcomes

the *vis inertiae*. The slave-trade may go far to account for the very frequent occurrence of slavery among savages who have long maintained relations with superior races, though due allowance must be made for the influence of the general intercourse with such races, especially in furthering commercial development. Another external cause is the *neighbourhood of inferior races*, the influence of which, as we have seen, clearly appears among pastoral tribes. It is easier for Hamitic and Semitic peoples to keep Negroes in a state of subjection than people of their own race.

General recapitulation.

| | Positive. | Negative. |
|-----------------------------|---|--|
| I. Internal causes. | | |
| A. General: | 1. Open resources and subsistence easy to acquire. | 1. Close resources. 2. Subsistence difficult to acquire. |
| B. Secondary, economic: | 1. A high position of women. 2. Commerce. 3. Preserving of food. | 1. Female labour serving as a substitute for slave labour. 2. Subjection of tribes as such. |
| C. Secondary, non-economic: | 1. Militarism (where slaves are employed in warfare). 2. Slaves kept as a luxury. | 1. Militarism (especially where foreigners are adopted). |
| II. External causes: | 1. Fixed habitations. 2. Living in large groups. 3. Preserving of food. 4. The slave-trade. 5. The neighbourhood of inferior races. | |

The reverse of each positive cause is, of course, a negative cause. Thus, if living in fixed habitations is a positive cause, nomadism is a negative cause. We have, however, noted most causes once only, as positive or negative causes, according as their influence in a positive or negative sense is most conspicuous. Among the general causes we have noted both the positive cause and its reverse, because these causes have an extraordinary importance. The position of women has also been noted in both senses; but here the positive and negative causes are not exactly the reverse of each other: an intermediate state of things is conceivable, in which women are neither so much overworked that they may be said to supply the place of slaves, nor hold such a high position that slaves are wanted to help them in their work.

Preserving of food and militarism occur twice, because they work in different directions.

We have arranged the separate causes within each group in the order in which we have found them. If we had arranged them according to their relative importance, they would have been enumerated in another order. Thus among the external causes the slave-trade comes last, though its influence is greater than that of the other external causes.

§ 2. *Outlines of a further investigation of the early history of slavery.*

We have viewed slavery as an industrial system, and inquired under what economic and social conditions this system can exist. This investigation we believe has led to valuable conclusions. But slavery (even if we confine ourselves to slavery among savages) may be viewed under many more aspects. We have not made any further study of the subject; but having collected many ethnographical materials, we have become acquainted with a great number of details which may afford subjects of further investigation. We shall give here an enumeration of various points connected with slavery, though we do not claim that it is in any way complete: it would

probably appear on closer scrutiny that many additions could be made to it. We shall mention the various points in short sentences, often in the form of inquiries.

I. The different ways in which people become slaves.

There are:

1^o Slaves by birth;

2^o Free-born people who become slaves.

In connection with the former point it may be inquired what is in each case the status of children born of two slaves, of a male slave and a free woman, of a female slave and a free man, and especially of a female slave and her master. This inquiry will enable us to find, whether and to what extent slaves are merged in the general population.

The manners in which free-born people become slaves may be distinguished according as slaves are acquired from without or within the limits of the tribe. This reminds us of the distinction we have made between extratribal and intratribal slavery. We may inquire then which of these two forms of slavery appears first. If we should find that extratribal is older than intratribal slavery (which does not seem unlikely) we might examine the economic and social conditions under which intratribal slavery can exist.

Extratribal slaves become such by:

1^o Capture in war or kidnapping. Here a wide field of research opens itself. Captives, when they are not enslaved, are killed (eaten, sacrificed), or exchanged after peace has been concluded, or ransomed by their countrymen, or adopted into the tribe of the captors. It may be inquired whether any of these modes of treatment can have gradually led to enslavement of the captives (e. g. captives are first adopted, and gradually differentiated from the born members of the tribe; or they are first eaten, then preserved to be eaten later on and in the meantime set to work, and finally employed as slaves and no longer eaten). Several of these modes of treatment coexist with slavery (e. g. some captives are sacrificed and

the rest kept as slaves; or slaves are occasionally sacrificed); does this only occur in the early stages of slavery, and indicate that slavery has not yet fully developed? When is slavery an object, and when is it only an incident of warfare? A remarkable phenomenon, worth a close investigation, is the occurrence of extratribal slavery or adoption of aliens together with a preventive check on population (infanticide, abortion) ¹⁾. When captives are enslaved, it is worth inquiring in what manner they are distributed among the captors; this will have a strong influence on the division of wealth

2^o Purchase. The prices paid for different classes of slaves show what slaves are most desired (men or women, people of different ages or nationalities). The slaves sold have often been captured by the sellers; but it also occurs that people are sold by their countrymen, especially criminals. Here we may notice the influence of the slave-trade on penal law people are probably often sold abroad, who otherwise would have been killed or expelled from the community.

Intratribal slaves become such (so far as we know) in the following ways:

1^o For non-payment of a debt. Here the general treatment of debtors and the extent to which the rights of creditors are acknowledged by the community are worth examining. Debtor-slaves have often, but not always, a right to become free by paying off the debt ²⁾. In some cases the creditor does not keep the debtor as a slave, but recovers his money by selling him abroad ³⁾.

1) To give one instance, Guppy states that in Ugi, in the Solomon Islands, „infanticide is the prevailing custom. When a man needs assistance in his declining years, his props are not his own sons but youths obtained by purchase from the St Christoval natives, who, as they attain to manhood, acquire a virtual independence, passing almost beyond the control of their original owner. It is from this cause that but a small proportion of the Ugi natives have been born on the island, three-fourths of them having been brought as youths to supply the place of offspring killed in infancy” Guppy, p. 42

2) See Post, *Ethn. Jur.*, I p. 366

3) Post, l. c.

2^o As a punishment, either directly, or when the *wergild* is not paid. This subject might be treated in connection with Dr. Steinmetz's investigations of early penal law. Criminals often become slaves of the chief or king; a study of this matter would lead to an inquiry into political institutions at large.

3^o By marrying a male or female slave. Here we may inquire where and to what extent *connubium* between free people and slaves exists.

4^o By offering themselves as slaves, or selling themselves. In the former case it has always carefully to be inquired whether such persons become slaves or voluntary servants; the latter is quite possible, and the terminology of our informants not always reliable, as we have seen when speaking of Oceania. When they really become slaves, there are probably open resources. It is then worth inquiring what can be the reason why, while resources are open and so everybody is able to provide for himself, there are people who throw themselves upon the mercy of men of power.

5^o Finally orphans and other helpless persons are sometimes enslaved.

II. The different ways in which people cease to be slaves.

1^o Redemption. Here the question presents itself, where slaves, or certain categories of slaves, have a right to be redeemed.

2^o Emancipation. Where, and under what social conditions, does this custom prevail, and where is it of frequent occurrence? What are the motives that induce the master to set his slave free? Emancipation as a substitute for sacrifice ¹⁾.

3^o Adoption. Connected with this is the fact, that in some countries slaves sometimes succeed to their masters' goods.

1) Among the Thinkits, at the feast held in commemoration of the deceased, the man who gave the feast used to part with some of his slaves, whether by sacrificing or emancipating them was left to the decision of the priest
• Erman, p 382.

Here we may ask whether or not such adoption and right of inheritance are only found in early stages and have to be regarded as survivals of adoption of aliens.

4^o Marriage of a slave with a free person, especially of a female slave with her master.

5^o Dedication to a god. Slaves can sometimes become free by devoting themselves to some deity¹⁾. Further details; power of the priesthood; compare the influence of the church in the Middle Ages.

In whatever way slaves become free, the position of the *liberti* deserves a separate consideration. Are they on a level with free-born men, or do they form a separate class? Do their descendants gradually become merged in the general population?

III. Treatment of slaves by their masters.

1^o Is the general treatment stated to be good or bad? Where the former and where the latter?

2^o Slaves are often stated to be looked upon and treated as members of the master's family. What does this mean? Where does it occur?

3^o Difference between freemen and slaves in food, clothing, etc. Slaves forbidden to wear the same dress and ornaments as freemen.

IV. Legal status of slaves²⁾.

1^o Is the master's power over his slave unlimited? Very often it is not. Connection with the development of the power of government.

1) Among the Ewe-speaking peoples of the Slave Coast „according to custom, any slave who takes refuge in a temple and dedicates himself to the service of the god, cannot be reclaimed by his owner, but as by paying a fee to the priest the owner can close the doors of all the temples in the neighbourhood to his fugitive slaves, this provision of an asylum for an ill-treated slave is more apparent than real” Ellis, Ewe-speaking peoples, p. 220

2) See also Post, Ethn Jur, I pp 370 sqq

2^o Rights of the slaves with regard to marriage and family. *Connubium* with freemen: see above. Are slave-marriages legally acknowledged, or do they entirely depend on the master's pleasure? Do the masters apply any principles of selection in mating the slaves? When the parents are slaves belonging to different masters, to which master do the children belong? Has the master full rights over his female slaves in a sexual respect?

3^o Right of property. Are the rights of slaves to their earnings (*peculium*) recognized? When the slave dies, who succeeds to the *peculium*?

4^o Have contracts made by slaves legal force?

5^o Punishment of slaves by their masters ¹⁾.

6^o Protection of slaves by penal law When a slave has been killed, is a *wergild* paid as for a freeman, or is only the price of the slave restored to the master? Similarly with regard to lesser injuries. Are those who commit any offence against the slave punished by the government? If so, is any exception made for the master? Is the master responsible for any damages caused by his slave?

7^o Sometimes the master may not sell the slave without his consent.

8^o It may also be that the slave, if ill-treated by his master, has a right to be sold. In some cases the slave can change his master by causing some slight damage to the new master or his goods. This formality has probably originated from the delivering up of the slave to the injured person for some real damage ²⁾.

9^o Has the slave any public rights, does he share in government matters?

V. The attitude of public opinion towards slaves.

1^o Are slaves despised? Details. Do the slaves receive a regular burial, or are their corpses thrown away?

1) See Steinmetz, Strafe, II pp 306—315

• 2) See Post, Ethn Jur., I p 377

2^o External signs of slavery (mutilations, dress different from that of freemen)¹⁾. Are these signs only intended clearly to show the difference of status, or to make fugitive slaves easy to recognize?

3^o Are ill-treatment and sale of slaves discountenanced by public opinion?

4^o Is there any instance among savages of slavery being considered a *status contra naturam*?

VI. Different kinds of slaves.

Slaves can be distinguished according to

1^o their nationality,

2^o the manner in which they have become slaves (difference between extratribal and intratribal slaves, between native-born and newly-acquired slaves)²⁾,

3^o the work imposed upon them (outdoor and indoor slaves, *familia rustica* and *familia urbana*).

What are the practical consequences of these distinctions?

VII. Slave labour.

Slaves sometimes perform

1^o the same work as freemen,

or 2^o the same as free women,

or 3^o the same as the lower classes.

4^o If some kind of work is performed by slaves only, what is its character? (Drudgery as opposed to noble work).

5^o Is the work for which slaves are employed despised³⁾?

6^o Amount of work. Are the slaves over-worked? Are they supervised? Are they kept at work by any compulsory means (flogging, etc.)?

7^o Do the slaves live in their master's house?

1) Among the ancient Germans slaves were obliged to wear their hair short (Amira, p. 139)

2) On the favourable position of native-born slaves in North-eastern Africa see above, pp 265, 267

3) In Dahomey „agriculture is despised, because slaves are employed in it." Burton, II p 248

VIII. Serfdom.

Does it ever exist among savages? Are there instances of the coexistence of slavery and serfdom? In what manner do people become serfs?

IX. Number of slaves.

1^o What is, in each case, the number of the slaves, and their proportion to the general population?

2^o What is, in each case, the numerical proportion of the sexes among the slaves?

3^o Do the slaves form a separate class of people?

4^o Are the slaves an integral part of the wealth of their owners?

5^o In some cases only certain classes (e.g. the nobility) are entitled to keep slaves ¹⁾.

X. Happiness or unhappiness of slaves.

Is it considered a great evil for one's self or one's friends to fall into slavery? Instances of suicide to escape from slavery ²⁾. In many cases it is not slavery as such, but sale to distant regions that is felt as a great calamity. We may mention here the curious phenomenon of people captured and enslaved by the enemy or sold abroad, being on their return despised or even repelled by their former countrymen ³⁾.

1) Among the Battahs of Mandhelung and Pertibie only the nobles are allowed to keep slaves. The higher nobles may keep as many slaves as they like, the lower only two or three (Willel, p. 43)

2) The Athka Aleuts sometimes prefer suicide to captivity in war or slavery (Petroff, p. 158)

3) „In the district of Allas [in Sumatra] a custom prevails, by which, if a man has been sold to the hill people, however unfairly, he is restricted on his return from associating with his countrymen as their equal, unless he brings with him a sum of money, and pays a fine for his re-enfranchisement to his kalippah or chief. This regulation has taken its rise from an idea of contamination among the people, and from art and avarice among the chiefs." Marsden, p. 255

XI. Consequences of slavery.

1⁰ Influence of slavery on the development and division of wealth. Slave-owners producing for export.

2⁰ Influence of slavery on the development of the military principle. The ruling classes, having learned to command their slaves, are more capable of commanding the people.

3⁰ Influence of slavery on the formation of social ranks. The existence of slavery is a handicap to those who cannot purchase any slaves; slavery furthers the divergence of the rich and the poor, of the nobles and the common people.

4⁰ Influence of slavery on the laws and customs regulating marriage, and on sexual morality at large. Female slaves serving as concubines.

5⁰ Influence of slavery on the condition of free women. When there are many domestic slaves, free women are no longer overtaxed with work.

6⁰ Influence of slavery on warfare. As soon as captives are regularly enslaved, the cruel modes of treating captives which may have formerly existed disappear. On the other hand, when the procuring of slaves becomes an object of warfare, war becomes much more frequent than before.

7⁰ Influence of slavery on the development of political power. Slave-owners are more likely to reach great efficiency in governing and warfare than people who have to work for their own subsistence ¹⁾).

8⁰ Influence of slavery on morality at large. The habit of absolute rule corrupts the masters. Slavery often engenders cruelty, or at least harshness. The slaves are demoralized, because their education is neglected and they do not live in normal family relations. Slavery moreover prevents „the

1) Bagehot remarks that slavery „creates a set of persons born to work that others may not work, and not to think in order that others may think ” Therefore „slave-owning nations, having time to think, are likely to be more shrewd in policy, and more crafty in strategy ” Bagehot, p 73 ; see also Ingram, pp. 5, 6

development of the sense of human dignity which lies at the foundation of morals" ¹⁾).

9^o Influence of slavery on the intermingling of races.

10^o Selectory influence of slavery. Ferrero's theory: slavery has greatly furthered the survival of the industrious type of man. High death-rate among slaves.

XII. Development of slavery.

Though we have not systematically investigated this subject, our studies have brought us into closer connection with this than with any of the points mentioned above. We shall therefore briefly state our impressions on the development of slavery, without, of course, claiming for the following remarks the value of a theory.

Slavery very probably first appears in the form of extra-tribal slavery, and originates from the adoption of captives, especially captive children. This is also Powell's opinion. According to him captive children were originally adopted and treated by the captors entirely as their own children. „This is not yet slavery. If the captive belongs to a tribe of hereditary enemies who have from time immemorial been designated by some opprobrious term, as cannibals, liars, snakes, etc. — then it may be that the captive is doomed to perpetual younger brotherhood, and can never exercise authority over any person within the tribe, though such person may beborn after the new birth of the captive. This is the first form of slavery. Usually, though not invariably, the captives adopted are children" ²⁾). Whether the first slaves were really captives belonging to a tribe of hereditary enemies, we do not know; but Powell expresses himself very appropriately, when he says that the slaves are „doomed to perpetual younger brotherhood". In the early stages of culture slaves are on the whole leniently treated, and there is little difference between

1) See Ingram, pp 9—11 But all this applies much less to early slavery than to slavery in its more advanced stages.

2) Powell, On Regimentation, p. CXII

young slaves and free children. But the slave always remains a „younger brother”. He never becomes the head of a family; and when the master who educated him dies, he becomes the subject of the master's child, the companion of his childhood. The slave does not count among the full-grown men of the tribe; he is not allowed to bear arms, he has no voice in government matters; though a member, he is an inferior member of the household in which he lives.

This is the first stage of differentiation between freemen and slaves.

The slaves are children captured in war¹⁾, their number is small. The slave, who is nearly on a level with the children, is wanted for much the same reason that children are so eagerly desired among most agricultural savage tribes: the larger the family, the more food can be produced; for land is still abundant. Slaves and freemen perform the same kind of work, with the exception perhaps of some domestic occupations, which are more and more left to the slaves.

Gradually the number of slaves increases. The slave-trade greatly furthers the growth of slavery. The keeping of slaves is more and more confined to the chiefs and principal men. Where slaves are captured in war it is the leading men who secure most of the booty; and where slaves are purchased it is only the rich who can give a good price for them. The ruling classes are the great slave-owners, and these people are naturally inclined to leave all the common work to their slaves, reserving for themselves only the noble pursuits of warfare and government. The difference between the slaves and their owners becomes thus greater than it was before. The common people come to distrust and hate the slaves, whom they regard as the tools of the aristocracy. And the differentiating process we have described here is always going on:

1) Adult males are not desired for slaves, because they are very difficult to manage. This is the case even among the semi-civilized Mohammedans of Baghirmi, see Naohhtigal, II p. 615

the more slaves a man owns, the greater his wealth; and the greater a man's wealth the better will he be able to procure slaves. The common people are continually sinking in the social scale, and in the course of time many of them are reduced to slavery for non-payment of money they have borrowed from the rich ¹⁾.

The further development of slavery can proceed in two different ways.

In some countries, where oil, cotton, and similar products are exported, slavery assumes enormous proportions. The large plantations can best be worked with slaves; and as manufactures are imported, slave labour serves not only to feed the master, but to provide him with the luxuries of life; the wants of the slave-owners, and accordingly the possible extent of slavery, become practically unlimited. This slave system, as we have seen, exists in some parts of the West Coast of Africa, and bears a close resemblance to that which till far into the present century was carried on in the Southern States of North America.

Where cereals are grown and agricultural produce is not exported on a very large scale, the course of things is different. An increase of slaves above a certain number is of little use to the owner. When he has slaves enough to provide him with a large quantity of food and other necessities for the use of himself and his family and personal servants, he does not want more slaves. The agricultural produce they could furnish would not be worth the pains of supervising them. The slaves (except a few who are kept for domestic services) are soon allowed to live rather independently, bound only to provide fixed quantities of agricultural produce and perform occasional services. And when the use of money becomes general, these slaves often contract with their masters to pay a yearly tribute in money instead of the services and payments in kind. The slaves become serfs. And gradually the whole of the

1) See Loria's splendid exposition of the function of political institutions as a means, for the rich, of maintaining their economic ascendancy.

lower orders are merged in this servile class. Ancient slaves, members of subjected communities, helpless persons who seek the protection of a powerful chief, all become the subjects and dependents of the ruling nobles. Such was the social system of the early Middle Ages, that in the course of time was entirely overturned through the progress of manufactures and commerce and the gradual appropriation of the whole of the land ¹).

1) Slaves have also sometimes been employed in manufactures. Such, according to Cunningham, was the case in ancient Tyre. Slaves also „worked as artisans in the factories of Athens” Cunningham, *Western Civilization*, pp. 66, 110. But we think such an employment of slaves is rather an exception.
